DRAFT/[redacted]
29 August 1956

MEMORANDUM FOR THE RECORD

SUBJECT: MKULTRA, Subproject 10B

1. The purpose for the initiation of Subproject 10B is to continue the research program of [redacted] for an additional year, starting 15 September 1956. The sponsor expects [redacted] to complete his research effort sponsored through [redacted] no later than 14 September 1957. It is understood that [redacted] at the sponsor's direction, will withdraw its support no later than 15 September 1957.

2. The scope of the proposed program will entail a critical analysis of all subject data with the goal of being better able to define the differences in certain effects of LSD. For a more detailed description see attached proposal.

3. The cost of this program is estimated to be $5500 for a period of one year. To this must be added a 4% service charge to [redacted] Therefore the total cost will not exceed $5720.00. Charges should be made against Allotment 7-2502-10-001.

4. Upon conclusion of the program the principal investigator will submit an informal statement of expenditures of monies advanced for research activities. It has been requested that the statement be submitted in essentially the following form:

(a) Personal Compensation (Salaries)(Subject Fees)
(b) Equipment
(c) Supplies and Services
(d) Travel
(e) Overhead
(f) Contingencies

Also, [redacted] has requested [redacted] to submit to them a summary accounting of monies received from [redacted] They requested the return of any unexpended funds received under a grant from [redacted]

5. Title to any permanent equipment purchased by funds granted the Hospital will be retained by the Hospital in lieu of higher overhead rates.

[redacted]

6. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the Hospital will conform with the accepted practices of that institution.

7. It was also agreed that technical reports reflecting the progress of the research program will be submitted at mutually acceptable intervals.

C 8. [redacted] is cleared through TOP SECRET and is aware of the true nature of the project.

PROSPECTUS

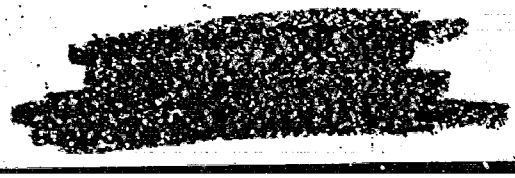

Conclusion of LSD Study:

In the past four years of research with LSD-25 we have developed reliable methods of (a) analyzing social situations and interactions; (b) describing personality in terms of social adjustment, and (c) relating social situations and social personality types to the specific effects of LSD. Through this methodology it has been possible to identify some important determinants of drug effects which have not been previously considered in studies of LSD-25.

While we have made considerable progress in systematically studying these determinants, a certain amount of data analysis still remains to be completed before the determinants of the LSD-25 effect on individual cases can be reliably stated.

Therefore, the primary objective of this final phase of the project is to complete the analysis of data on all our subjects in order to define the extent that differences in certain effects can be accounted for by the above-mentioned determinants.

A second objective is to complete reports on some peripheral studies conducted with Serpisil and certain other psychochemicals.

A third objective is to reduce and summarize the many progress reports submitted during the course of the project into a final report.

Budget:

Personal compensation (salaries)	4,500
Equipment	--
Supplies and services	500
Contingencies, travel	500

TOTAL $5,500.00

[redacted]

DRAFT/[redacted]
9 February 1956

MEMORANDUM FOR: THE RECORD

SUBJECT : Additional Funds for MKULTRA Subproject 10

1. [redacted], located at the [redacted], was requested by TSS/CD to enlarge the scope of his current research program. This request was made by the Chemical Division to enable [redacted] to pursue areas of research of interest to TSS/CD.

2. The areas of research that [redacted] will investigate will cover the evaluation of certain known techniques for predicting the type and magnitude of the effects of drugs, particularly LSD and alcohol. In addition to the above, there will be an increased effort to exploit certain techniques developed by [redacted] group in the course of their LSD studies for predicting LSD effects, and adapt these techniques to alcohol studies.

3. The cost of this program for a period of one year will be $5,500.00. To this must be added a four percent service charge of $220.00 to [redacted] for its services. Charges should be made against allotment 6-2502-10-001.

4. The same Memorandum of Agreement applies to this extension as was agreed upon in the original project. However, this additional money will not be accounted for separately, but will be accounted for in the overall project accounting.

5. [redacted] is cleared through TOP SECRET, and is aware of the true nature of the program.

PROSPECTUS

In the past three years of research with the drug LSD-25, we have developed reliable methods of analyzing social situations and interactions. Our progress in assessing personality types is useful in diagnosis and prediction. These methods are based on a multi-discipline assessment of personality in dynamic social adjustment under normal circumstances and under stress, i.e., drug effect, irrespective of the attributes of any specific drug.

The briefest phrase to characterize our main area of study is "social personality". A laboratory of experimental social psychiatry has been established in such a way that various types of personality and many situations may be subjected to critical study. For example, its methods can be applied to any specific problem such as the effects of LSD or other drugs like alcohol, on the improvement of interpersonal relations.

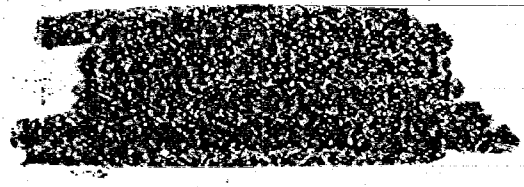

There are two important steps to be taken: (1) Completing the work in progress of personality types so we can define more clearly our social personality types and relate them to (a) the more standard, objective tests such as the Wechsler-Bellevue on which [redacted] theory of types is based, and (b) the conventional clinical projective tests such as the Rorschach and Thematic Apperception Tests; (2) Trying out the utility of these tests and special interview and questionnaire methods developed in the course of our studies for predicting specifiable change in social behavior following the ingestion of various drugs, particularly LSD and alcohol.

PROSPECTUS

In the past three years of research with the drug L.S.D.-25, we have developed reliable methods of analyzing social situations and interactions. Our progress in assessing personality types is useful in diagnosis and prediction. These methods are based on a multi-discipline assessment of personality in dynamic social adjustment under normal circumstances and under stress, i.e., drug effect, irrespective of the attributes of any specific drug.

The briefest phrase to characterize our main area of study is "social personality". A laboratory of experimental social psychiatry has been established in such a way that various types of personality and many situations may be subjected to critical study. For example, its methods can be applied to any specific problem such as the effects of L.S.D. or other drugs like alcohol Serpasil, or the improvement of interpersonal relations.

There are two important steps to be taken: (1) Completing the work in progress of personality types so we can define more clearly our social personality types and relate them to (a) the more standard, objective tests such as the Wechsler-Bellevue on which [redacted] theory of types is based, A and (b) the conventional clinical projective tests such as the Rorschach and Thematic Apperception Tests; (2) a comprehensive review of every aspect of our experimental method. The second step involves several minor projects such as completing analysis of the [redacted] and H making more explicit our conceptions of subject-experimenter relationships.

Method and Organization

We are considering three specific areas of personality, each of which is currently being explored with different methods.

WARNING NOTICE
SENSITIVE INTELLIGENCE

A. Social Personality Assessment

In the evaluation of the social personality types, we have examined personality along simple social dimensions by easily applied interview and observational methods to determine how a particular type functions under stresses induced by social-situational changes or drugs.

The social dimensions we used here focused primarily on the subject's interpersonal relationship: (a) a person's feelings about other people; (b) how does he communicate to other people; (c) how does he react to stress situations which involve his relationships to other people; (d) how aware is he of how he is behaving when he is with other people. From these dimensions we derived thirty-six personality attributes.

Through one method of analysis, using a theoretical point of view of the above method of evaluation, six personality types have been determined. The relationships established between these types and their reaction to L.S.D. have been reported in our 1953-1954 Annual Report. Persons who over-value acceptance or rejection of others tend toward a turmoil type of L.S.D. reaction. Persons who are socially introverted are most likely to have a schizophrenic type of reaction. On the other hand we were unable to predict the psychiatric syndrome or its severity in the elated or interactive type. It is clearly indicated that further careful study is required to determine more reliable criteria for prediction and diagnosis.

Some subjects maintained enough of their pre-L.S.D. traits to remain characteristically of the same personality type under L.S.D. Others, however, showed under L.S.D. traits opposite their pre-L.S.D. characteristics.

SENSITIVE INTELLIGENCE

A more thorough investigation of these two trends is needed which will clarify the significant dynamics of personality reaction to stress.

To help resolve the above areas of difficulty, a factor analysis has been done on the thirty-six attributes. Two very reliable, relatively pure factors have been determined: Factor I is the dimension of introversion-extroversion; while Factor II ranges from dominant-extrapunitive to submissive-intrapunitive dimensions. The determination of these factors open up considerable opportunity to correlate this method of assessment with other more standardized tests such as the Wechsler-Bellevue and other projective tests such as the Rorschach.

Another method used in the study of the assessment of the social personality is the questionnaire. The Direction-Control Questionnaire is filled out by the subject himself before he takes L. S. D.

On the basis of interview data of the first forty-three subjects, we found that specific changes in social direction took place from pre to during L. S. D., e. g., a decrease in moving with, an increase in moving away, toward and against other people. From the interview data we constructed a questionnaire of two hundred and eleven items to determine a person's behavior in these areas. As a result of an item reliability analysis, on a sample of two hundred and twenty college students, we have reduced the number to forty-three highly discriminating items.

The dimensions measured by this questionnaire are: (2) the five directions a person moves in his interpersonal relationships, i. e., with, toward, out, away and against other people, and (b) the type of control he

SENSITIVE INTELLIGENCE SOURCES AND METHODS INVOLVED

experiences as he interacts with others. Further work will include scoring previous questionnaires to correlate them with personality types and factor scores.

This technique offers us the opportunity to determine the relationship between the social personality assessment by interview and observation with an assessment by the subject himself and with other testing procedures.

The following method and organization of study of the social personality assessment is proposed:

(1) There is data available on one hundred and twenty-five subjects which can be classified on social personality attributes. So far only forty-three subjects have been classified. It is proposed that this year the complete data will be classified. This will extend the number of subjects in each category to a point where our results will be more statistically reliable.

(2) New subjects will be studied to the extent necessary to increase our sample in any categories to a statistically treatable number. It is impossible to state the number of additional subjects that are necessary.

(3) In the elated personality type a sizeable number of subjects are represented. So far no significant predictive trend has been established for this type. By factor analysis of the various attributes, it is expected that this elated category may be subdivided into component categories which will be statistically reliable for predictive as well as diagnostic purposes. More subjects of this type will be tested in our conventional manner if it is necessary.

...INS...CE
...NITIVE INTELLIGENCE
SOURCE AND METHOD INVOLVED

(4) A reliable scoring method has been established for the Direction-Control Questionnaire (See Social Personality Assessment). Seventy-five L.S.D. subjects have been administered this questionnaire. The scoring and analysis will be carried out this year. This would be expected to lead to more critical evaluation of the social personality types. The two methods of assessment of personality, the social interview, which is more informal and personal in its administration, and the Direction-Control Questionnaire, which covers the same general area by using an established series of questions will be compared. This comparison of these two instruments should show which areas of interview are of most value as well as offering a standardized measuring device, namely, the Direction-Control Questionnaire. Additional studies of college students will be carried on in the application of these instruments.

B. [redacted] Theory on the Wechsler-Bellevue Psychometric

The general theory of [redacted] personality types has proved fruitful as witnessed by [redacted] in our last semi-annual report which dealt with polar classifications based on acquaintance with the subjects. The theory being attached to one of the most reliable psychological instruments (Wechsler-Bellevue) makes possible the attainment of relationships to social and projective measures of personality. In addition, [redacted] attaching of hypothesis to each mode of learning (subtests) may reveal which adjustment patterns indicated by other instruments are stable or in the process of change. Moreover, the scatter pattern, depicting the subject's preferential modes of learning should prove useful in

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

distinguishing personality types displaying similar behavior patterns, but varying dynamic structures.

We have already acquired forty Wechsler-Bellevues on subjects prior to their taking L. S. D. Analysis of scatter and correlation with other measures would be needed to indicate how many cases would be required to render reliable the dynamics underlying scatter patterns. Selected individuals would be tested to provide us with adequate sample for each theoretical quadrant and assure us of proper statistical manipulation.

C. Psychological Projective Tests

The Thematic Apperception, Rorschach Ink-blot and Draw-a-Person Tests are conventional clinical instruments. We have used them to assess overall personality style, perceptual organization and interpersonal attitudes, both with and without L. S. D. The content of the subject's personality problems is also indicated.

The average results of twenty-nine subjects as a group have been analyzed for each test separately and were reported in our last semi-annual report.

A substantial contribution would be made to assessment of personality dynamics if the performance of each subject separately on the three projective tests were analyzed. Twenty-four subjects have taken these tests who had our standard dose of L. S. D. It is planned to correlate the subjects' responses on the three tests to identify discrete psychological types.

These same twenty-four subjects have been classified into types arrived at by the social personality assessment method so the psychological types will be compared with the social types. This procedure will provide

a comparative test and may suggest new dimensions or type refinements for the present social personality categories. A dimension of depth of inner personality structure will thus be added to the breadth of outer social patterns.

Minor Areas for Completion

It is proposed to continue some work in several areas nearing completion or growing out of the previous research.

(1) The [redacted] mentioned as a method in the 1953-1954 Annual Report, has been given to twenty subjects. It is the most direct scorable assessment of emotions per se which we use, warranting completion of scoring and analysis.

(2) The difficulty of L.S.D. subjects in expressing their thoughts and feelings has been viewed as a phenomena of emotional blocking, intellectual deficit and interpersonal withdrawal. An educational psychologist, speech therapist, has become interested in studying L.S.D. speech difficulties. We have recorded interviews of subjects, pre and during L.S.D., which he will analyze to determine what, if any, aphasic conditions may be present under L.S.D. Changes will be investigated in pitch, rate, articulation or other functional distortions of speech such as are encountered in stutterers and other speech conditions.

(3) Material on the therapeutic and educational implications of L.S.D. for patients and non-patients remains to be completed. Final analysis of available data should not require very extensive work.

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

(4) The original Occupational Therapy Laboratory Test had deficiencies in method, including its administration. We have made progress recently in devising a more appealing, spontaneous, but measurable situation which rests more on determining the interests of subjects and patients. It is called the "Interest Selector". The emphasis on interest developed from the analysis of results from the previous Occupational Therapy Test, which showed subjects could carry out self-initiated activities better than those requested or imposed by others. An initial manual with the rationale and procedure for the "Selector" has already been written.

MEMORANDUM OF AGREEMENT

The purpose of this Memorandum of Agreement is to set forth the mutual administrative responsibilities of the principal research investigator and the sponsor. Therefore, it is mutually agreed that,

A. The principal investigator shall submit to the sponsor, at six month intervals, an informal statement of expenditures of monies advanced for research activities. It is requested that the statement be submitted in essentially the following form:

Personal Compensation
(Salaries, Subject Fees)
Equipment
Supplies and Services
Contingencies
Overhead

B. It is understood that any travel expenses incurred in the furtherance of the research program will be accounted to the Hospital in a manner consistent with its established practices and policies.

C. The principal investigator shall submit to the sponsor semi-annual reports on the technical progress of the research covered by these funds.

[redacted]

Date: September 20, 1955

MEMORANDUM FOR: THE RECORD

SUBJECT: ADDENDUM TO SUBPROJECTS 8 and 10

1. The purpose of this addendum is to set forth the mutual administrative responsibilities of the contractor and sponsor.

2. The above subprojects represent the research program of [redacted] located at the [redacted] covering the period of 9 June 1953 through 15 September 1955.

3. [redacted] has requested the [redacted] to submit to them a summary accounting of monies received from [redacted]. Also, they requested the return of any unexpended funds received under a grant from [redacted].

4. Title to any permanent equipment purchased by funds granted the Hospital shall be retained by the Hospital in lieu of higher overhead rates.

5. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the [redacted] shall conform with the accepted practices of that Institution.

6. It was agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

MEMORANDUM FOR THE RECORD

SUBJECT: Project MKULTRA, Subproject 10

1. Subproject 10 is being set up as a means to continue the present work in the general field of L.S.D. at the [redacted] B
B [redacted] from 15 June 1954 until 15 September 1955.

2. This project will include a continuation of a study of the biochemical, neurophysiological, sociological, and clinical psychiatric aspects of L.S.D., and also a study of L.S.D. antagonists and drugs related to L.S.D., such as L.A.E. A detailed proposal is attached. The principle investigators will continue to be [redacted] and [redacted] all of C
C B [redacted]

3. Original Subproject 10 for the sum of $32,000.00 was initiated for the production of certain rare organic chemicals. The committed money was never actually spent. It is the proposal of TSS/CD to add an additional $10,744.00 to the original sum of Subproject 10 making a total of $42,744.00 to underwrite the present proposal which is attached. [redacted] will B
serve as a cut-out and cover for this project and will furnish the above funds to the [redacted] as a philanthropic B
grant for medical research. A service charge of $1,644.00 (4% of the estimated cost) is to be paid to [redacted] for B
this service.

4. Thus the total charges for this project will not exceed $42,744.00 for the period ending 15 September 1955.

5. C [redacted] and [redacted] B-C
B [redacted] are cleared through TOP SECRET and are aware of the true purpose of the project.
