RESEARCH PROPOSAL

The research to be undertaken in this next period involves the study of the growth stimulating principles extracted from natural occurring substances. These growth substances will be studied as to their effect on increasing the rate and number of organisms grown in a given time. The course of the investigation will be to attempt to elucidate the contribution of each substance to the total metabolic situation. It is hoped that by understanding the mechanism of these relationships, substances can be found which will enable more rapid attainment of high microbial populations. In any case, a basic study of such factors should contribute to a more complete understanding of the mechanics of microbial growth.

RESEARCH PROPOSAL

The research to be undertaken under this proposal involves the study of the relationships among the two principal classes of microorganisms involved in the deterioration of petroleum products. Neither of these microorganisms alone can produce either as rapidly or quantitatively as much damage as the combination. The course of the investigation will attempt to elucidate the contribution of each class of microorganisms due to total metabolic situation. It is hoped that by understanding the mechanism of these relationships substances can be found which will enable the hardier one of the two classes to subsist alone. In any case a basic comprehension of the mechanism of microbolic deterioration will enable planning for more effective systems.
