Project MKULTRA, Subproject 105

Date Initiated: 20 January 1960

Date Expires: 30 June 1962

Funds-current year: $4,000.00

Purpose: This project supports research on determinants of virulence in pathogenic bacteria. It provides consultation services on problems related to maintenance of virulence. In Vivo and Vitro characterization data will be developed.

Status: A continuing research. This is a long research but information has been developed to meet ad hoc requirements derived from other but related programs of TSD interest.

Gentlemen:

We enclose a statement of account for the period July 1, 1961 through June 30, 1962 for the grants for the support of research entitled [redacted] B We apologize for not sending the statement at the proper time after June 30.

Our records indicate that the grant was extended through December 31, 1962, therefore, a statement for the final six month period is now due. The accounting records show some unliquidated commitments at the end of the grant period and we would prefer to withhold the final statement until all payments have been made so that we may report an actual cash balance and make a refund of the exact amount. If this is not acceptable for your purposes, please advise us and we will prepare a statement based on expenditures and outstanding commitments.

Very truly yours,

[redacted]

Dear [redacted]

The [redacted] did not send a report last July B
to the [redacted] They thought that since we got a six months extension that a report would be due after the books were closed as of January 1, 1963. At all events, they are preparing now a summary accounting for the year July 1, 1961 to June 30, 1962. They will send me copies of this within the next several days, and I will send them on to you. Also, copies will be sent to the [redacted] B [redacted] In addition, they will prepare an accounting summary for the six months from July 1, 1962 to December 31, 1962. I will send you a copy of this six months accounting when it is available.

With best regards,

[redacted] C

[redacted] C

[redacted] B

We propose to isolate from various animals (including man) by nasal swab organisms that are classified by usual bacteriological techniques as Staphylococcus aureus. Strains of S. aureus are important as causative agents of infection in man and, also, for production of a toxin that causes food poisoning in man. Strains of S. aureus also cause infection in other animals. We propose to study in vitro and in vivo characteristics of S. aureus strains from various animal species to determine if host adaptation occurs in the staphylococci as does occur for example, in the salmonellae. In vitro characterization will include test for various hemolysins, type of coagulase, lipase activity, DN ase activity, fibrinolysis, phage pattern and antibiotic sensitivity. In vivo characterization will include test for dermonecrotic toxin, enterotoxin, and infectivity for mice.

105-5

1. RESEARCH PLAN:

A. Specific Aims

To characterize by both in vitro and in vivo studies Staphylococcus aureus of various animal origins (including man) to determine if host adaptation of these microorganisms occurs. For example, are S. aureus isolated from human beings different from S. aureus isolated from dogs?

B. Method of Procedure

Isolation from nasal swabs (and infections where available - e.g., boils in man, arthritis in chickens, mastitis in cattle, bladder infections in mink) of S. aureus using mannitol salt agar, Difco 110 agar, and tellurite glycine agar. After establishment of pure cultures determine kind of hemolysins, phage type, type of coagulase, lipase activity, fibrinolysis, DN ase, and antibiotic sensitivity. In vivo characterization will include test for dermonecrotic toxin, enterotoxin, and infectivity for mice. A long term approach would include serological studies of possible differences between strains using the Ouchterlony technique.

C. Significance of This Research

The biology of the staphylococci needs investigation to determine if there is adaptation to different animal species. Such terms as "human" staphylococci, and "bovine" staphylococci are used without a real basis for their use except to mean the source of the particular culture.

D. Facilities Available

Laboratories and animal rooms are available. No unusual equipment is required and the usual bacteriological equipment is available.

[redacted] The purpose of this laboratory is to make a continuing survey of rabies in wild animals by trapping. Through the cooperation of Public [redacted] we obtain nasal swabs from the animals. This then gives a source of wild animals that have not been in contact with man.

B

2. PREVIOUS WORK DONE ON THIS PROJECT:

We have used most of the techniques listed in Paragraph B (Research Plan) in studies on the pathogenesis of staphylococci. We have also studied the in vitro characteristics of staphylococci causing acute bovine mastitis and chronic bovine mastitis. We have started to isolate staphylococci from nasal swabs of various animals. During the past year we have examined nasal swabs from deer, foxes, skunks, and opossums as well as from laboratory animals such as rabbits and mice. We are currently doing laboratory in vitro tests on the staphylococcal cultures that have been isolated.

3. PERSONAL PUBLICATIONS:

[redacted]

C

3. PERSONAL PUBLICATIONS (continued)

4. RESULTS OBTAINED BY OTHERS:

Many workers have characterized staphylococci isolated from nasal swabs from human beings (Elek, S. D. "Staphylococcus pyogenes and Its Relation to Disease" 1959, E. and S. Livingstone Ltd., Edinburgh and London), and from milk from dairy cattle (Reid W. and Wilson, J. B., Am. J. Vet. Res. 20: 825 (1959). There has also been extensive work on characterization of staphylococci from infections in human beings, but limited work has been done on characterization of staphylococci from infections in other animals (e.g. Smith, H. W., J. Path. and Bacteriol. 67: 73 (1954). Rountree (J. of Path. and Bacteriol. 72: 319 (1956) has done phage typing of staphylococci from nasal swabs from various laboratory and domestic animals. Thus it would seem appropriate in a laboratory where extensive work on staphylococci per se is being done that a detailed investigation be carried out of the characteristics isolated from various animal species.

BUDGET SHEET

NOTE: Under column entitled "OTHER" indicate, if any, funds anticipated from other sources to be applied to this project.

	BUDGET	
	Requested from Foundation	Other
PERSONNEL: (Professional and technical assistants, including duties. Indicate names of professional personnel if already selected)		
Research Assistant (Graduate student to be selected.)	$2,148	
PERMANENT EQUIPMENT: (Itemize)		
CONSUMABLE SUPPLIES: (Itemize)		
Culture Media...$292 Animals.....200 Animal Feed.....100 Glassware.....200 Chemicals.....68	860	
TRAVEL: (State Purpose)		
To attend Soc. of [redacted].$150 To study techniques in Dr. [redacted]'s laboratory in [redacted].....200 To collect samples.....150	500	C
OTHER EXPENSES: (Itemize)		
OVERHEAD: (See "STATEMENT OF POLICY," Sec. VIII, Par. 7)		
	492	
Total	$4,000	

Estimate of funds required to complete project if one year is not sufficient to bring to completion: $4,000 B

Note: The principal investigator has $20,000 per year from the [redacted] and other sources to study virulence factors in staphylococcal infections. None of this money is available for work outlined in the present proposal.

105-7

RESEARCH PROPOSAL

This Department has had under investigation studies on virulent and non-virulent Staphylococci. It is expected that by investigation of biochemical properties and metabolic functioning of the major genetic variants, indicators would be identified to mark the virulent Staphylococci. The project, therefore, has genetic, metabolic, and nutritional components. The varieties of toxins produced by the various Staphylococci as well as the intensity will be determined as sub-areas in this study. It is expected that the eventual goal of this investigation will be biochemical tests which will identify the organisms of interest.

105-7

PROPOSED BUDGET

Pay of personnel	$3,200.00
Travel	200.00
Supplies	600.00
Total	$4,000.00

105-8

[redacted]

DRAFT
22 December 1959

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 105

1. The purpose of subproject 105 is to support investigations at the [redacted] on the determinants of virulence in Staphylococci. This study is an important fundamental investigation which can lead to an increased understanding of the process of pathogenesis.

2. Dr. [redacted] will be the principal investigator.

3. The cost of this program for the first year is $4,000.00. To this sum must be added $160.00 representing a four per cent service charge to the [redacted] making the total amount for one year $4,160.00. The [redacted] will function as cut out and cover for this grant. The cover title of the project is [redacted]

4. Total cost of the project for a period of one year will not exceed $4,160.00. Charges should be made against Allotment No. 0525-1009-4902.

5. The [redacted] has requested the University to submit [redacted]

105-8

-2- [redacted]

a summary accounting of monies received and to return any unexpended grant funds at the end of the project year.

6. Title to any permanent equipment purchased by funds granted the University shall be retained by them in lieu of higher overhead rates.

7. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the University shall conform with the accepted practices of that institution.

8. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

9. Dr. [redacted] is cleared through SECRET and is aware of the true purpose of the program. C

RESEARCH PROPOSAL

This Department has had under investigation studies on virulent and non-virulent Staphylococci. It is expected that by investigation of biochemical properties and metabolic functioning of the major genetic variants, indicators would be identified to mark the virulent Staphylococci. The project, therefore, has genetic, metabolic, and nutritional components. The varieties of toxins produced by the various Staphylococci as well as the intensity will be determined as sub-areas in this study. It is expected that the eventual goal of this investigation will be biochemical tests which will identify the organisms of interest.
