INSTRUCTIONS

1. If funds, in the form of other than U.S. Dollars were on hand, received, or disbursed during the accounting period, all pertinent data, i.e., rate, method of acquisition, etc., must be shown. If advances have been made to third parties, enter the total of such advances outstanding at the beginning of the accounting period on line 1a.

2. If more space is required to explain receipts, prepare receipt form, number and attach hereto. In every case, completely identify the source of receipts.

3. Attach a voucher for each expenditure and assign a number thereto in numerical sequence. The voucher may be the receipt obtained from the payee. When a receipt is not obtained, prepare a certificate and attach as a voucher. When space on form is not sufficient to list all vouchers, prepare a listing on a separate sheet and enter the total under item 3. If advances to third parties are outstanding at the close of the accounting period, attach an itemized list and enter the total on line 3a.

4. Final credit will not be given for disbursements which are advances to be accounted for. When accounting for advances are obtained, list as expenditures or refund of cash, as appropriate.

5. Total receipts entered on the line "Total to Account For" must agree with the total disbursements entered on the line following "Total Accounted For."

PROPOSAL FROM: [redacted] C

[redacted] C

Comments of reviewer and the individual scientists are as follows:

C [redacted]: [redacted] C is one of the most ingenious and resourceful C of our [redacted] and his work enjoys widespread respect. This proposal for what he aptly terms a [redacted] C deserves serious and favorable consideration for several reasons. It is a logical development in a research program which has been successful and productive. It is striking at some basic theoretical and practical problems in human behavior. His plan for this phase of the program is admittedly unorthodox. The fact that it is unorthodox does not speak well of those who plan (or give financial support to) many of our large-scale or medium-scale social research projects. Particularly in the [redacted] fields we need more such exploratory work in C research strategy.

[redacted] C tele- C phoned me on March 1 concerning the [redacted] proposal. He B strongly recommends it, pointing out that [redacted] is in effect underwriting a third of the cost. [redacted] C also says that C about $1500 of [redacted] budget can be provided from other B sources--[redacted] In connection with the B [redacted] meeting.

C [redacted] In accordance with our telephone conversation on March 1, I am filing this letter in support of the research proposal submitted to you by [redacted] You will C & B recall that this represented a form of [redacted] C study of family behavior.

Several months ago I discussed this project at some length with C [redacted] and indicated at that time that it seemed to me extremely worthwhile; I then offered to try to find some foundation support for it and I had in mind an approach to the [redacted] B B [redacted], a foundation which had, in the past, provided some B & F money for travel of my [redacted] However, C [redacted] did not complete the draft of the proposal until after B I had left [redacted] and I fear that my influence with the [redacted] B B [redacted] varies directly with distance from the [redacted] B C I have watched [redacted] work for many years; I was unsuccessful some years ago in my attempt to persuade him to join the [redacted] B B [redacted] Through all these years I have developed the highest regard for his work, for his imagination, for his observational skills, and for his technical competence. His most recent activities known to me in detail have included the report of a research study

(over)

(con't)

supported by [redacted] funds at the [redacted] held about a year ago at [redacted]

With regard to the budget for the present proposal, it can be reduced by subtracting two recent awards to [redacted]. he will be given some travel money by the [redacted] to go to [redacted]; he will be given some travel money from the grant that [redacted] made available to [redacted] for additional travel [redacted]. It seems to me that both of these awards represent further measure of his distinction and I believe that a small additional investment from [redacted] in terms of the balance of his needs would represent a very profitable study of [redacted] leave in CULTURAL INFLUENCES AS BROUGHT TO bear by families on children.

I hope this letter of additional indorsement will have some consideration when [redacted] study is reviewed.

[redacted]

I have gone over the excellently prepared proposal by [redacted] for support on their project, [redacted]

I haven't much to say about the proposal. It is well prepared and a meaningful part of [redacted] research program, which is now turning International [redacted]. The problems are well-posed, and [redacted] is a most capable individual. Indeed he is one of the leading [redacted] in the area of family study. I, and others, have a great deal of respect for his abilities.

A few, key questions do appear to me, and they arise mainly from an analysis of the budget. Sometimes one gets cues as to plans from looking at the budget. I think the following questions should be answered before [redacted] invests any money on the proposal:

1. Was this proposal prepared for the application to [redacted]

2. What support other than that shown from [redacted] is available to the proposer?

3. I do not understand the travel plans at all. Is this proposal to provide travel for [redacted] to the [redacted] and the [redacted]

4. I do not see why a 15% overhead needs to be provided to [redacted] If [redacted] supports travel.

5. What is the sixth-time from October 1, 1960 to 30 June 1961? Is this time to carry out some of the present proposal?

6. What other support is [redacted] receiving for his research program: sources, amounts, travel, etc.

(over)

[redacted] (con't)

7. I am not convinced that a case has been made for me, at least, that the well-developed and meaningful reconnaissance could not be carried out by one person in [redacted] at the [redacted] and in [redacted]. I am sorry to appear so negative in this review, but I do not feel that I can express an affirmative opinion unless most of the above items are clarified.

P.S. May I urge that applicants be asked to provide item 6 information on all proposals where this may be relevant.

[redacted]

This proposal strikes me as highly meritorious and definitely one we should support. The reasons are the following: 1) the problem itself is of crucial importance, [redacted] 2) the approach which is proposed appears to be a sound one being based on overtly rateable behavior, yet referring to the kinds of role-relationships which probably lie at the root of much personality development; 3) the conception of the family as a social unit in which [redacted] seems excellent; 4) the research methodology has been tried and proven capable of producing useful data; 5) the investigators have an established reputation in the field of studies being proposed for investigation; 6) the desire on the part of the investigators to broaden their scope to a cross-cultural analysis, including the crucial [redacted], is perhaps the most important reason for supporting the study; the net of contacts which they have established already, their language competence, and their research approach (i.e. its adaptability) all suggest that their proposed [redacted] study would be brought off successfully.

I heartily recommend that this proposal be supported.

[redacted]

The research proposal by [redacted] is an excellent model for documents of this kind. These men certainly know what they're doing, as well as anyone can know in advance of actual investigation, and they lay out their proposal in such a way as to indicate clearly where they are and in what directions they will try to move.

In addition, what I know about [redacted], both from professional reputation and from personal acquaintance, leads me to believe that he would be a top-notch man for carrying out [redacted]. The only addition I have to suggest may not amount to much. I believe the [redacted] attempted to do some depth studies of the authoritarian structure of [redacted] after the war. The subjects were [redacted] prisoners of war who were kept under cover in [redacted] for several years. I understand that this has complicated the publication of the studies. I have not seen the studies, and I do not know anything about their quality.

117-13

April 26, 1962

[redacted] C
B

Dear [redacted] C

Thank you for your letter of April 14. I believe it will facilitate our action on your proposal. In elaboration of my telephone comment, I feel that the work you propose compliments work we have maintained on the development of personality and its relationship to environment. I feel confident that we will be able to respond to your proposal request for support by the end of May.

I should like to arrange, at some point, an opportunity for you to meet with [redacted] C B who, in his work with [redacted] has evolved a system of personality description that might be extremely useful in your own studies. The attached reprints from [redacted] B provide some indication of the direction of his work.

Best regards.

Sincerely yours,

[redacted] C
Executive Secretary

[redacted] B 117-14

[redacted] B

April 14, 1960

C [redacted]
B
C Dear [redacted]

Following up our telephone conversation, I am writing to express my great appreciation of the good news you communicated and to make an official record of our current budgetary picture.. As I stated to you over the phone, B [redacted] have granted a sum of $3500 and 15% Overhead in partial support of the undertaking this summer. In effect, this grant plus the additional awards from B [redacted] B and [redacted] B which you of course already know about, finances travel [redacted] for our staff and th[redacted] F for us, but leaves basic salaries and the cost of research operations unprovided for. In financial terms, of the $11,83[illegible] (exclusive of Overhead) requested in the budget originally submitted to you, a total of $5057 has now been provided from other sources, leaving a balance of $6774. Accordingly, the amount requested in our application should now be revised downward to this figure plus the 15% Overhead for a total of $7790

I hope that an occasion will arise in the near future for us to become acquainted on a face-to-face basis.

Cordially yours,

[redacted] C

[redacted] C

[redacted] C

[redacted] C

[redacted] B

I. Overview

This proposal constitutes the first, exploratory stage of what is hoped may develop into a full scale program of [redacted] C The proposal grows out of work currently being carried on by the principal investigators here in the United States which has led to certain hypotheses that are most appropriately studied in cross-cultural contexts. These emergent hypotheses fall into two major groups.

1. Parental role differentiation and personality development. Results from an American sample (see attached Progress Report) suggest that the development of such desirable personality characteristics as responsibility and leadership is more likely to occur in families in which parental roles are clearly differentiated, with patriarchies being especially favorable for boys, matriarchies for girls, and egalitarian families producing less effective children of both sexes. These generalizations are limited, however, by the low frequency, in the American sample of families representing extremes of parental role differentiation.

2. Family vs. peer as socializing agents. Although the evidence for this group of hypotheses is not as clear, it suggests that the nature of internalized values and controls varies appreciably with the degree to which the peer-group, rather than the family, becomes a major agent of socialization for the child. Of particular importance in this connection is the degree of continuity or discontinuity between the values and socialization techniques of the family and those of the peer group. Again, the restricted range of these phenomena within the American sample seriously impedes investigation of them.

Although, as noted above, certain types of variation crucial to both groups of hypotheses are relatively infrequent in the United States, they are apparently far more common [redacted] F Thus, families representing extremes of parental authority are relatively numerous in [redacted] F notably [redacted] F (see Section VIII). Similarly, the growing importance accorded to youth groups in [redacted] F has created situations in which the group has

played a far more important role in the socialization of the child than it does in the United States, the most outstanding instances of this phenomenon occurring in [redacted] F and, even more notably, in [redacted] F (see Section XIII).

In the light of these considerations, it appears highly desirable to undertake studies in [redacted] F using the same concepts and methods as those employed in the United States. At the same time, it is obvious that the approaches employed to date in American work cannot be transferred lock, stock, and barrel to [redacted] F; they must be evaluated and modified in the light of the particular cultural contexts in which they are used. Such modification is best accomplished, in our view, by proceeding slowly, becoming ourselves acquainted with these cultural settings, consulting [redacted] F colleagues (several of whom are already working in this area), involving them in our own and similar research efforts, and in carrying out pilot studies for the development of comparable methods that can be employed both [redacted] F and the United States. The present proposal is directed toward these very ends. The specific aims are outlined below.

XI. Specific Aims

The proposal involves three interrelated objectives:

1) To explore possibilities for organizing and carrying out cooperative studies of family structure and personality development in [redacted] F which are designed to utilize comparable concepts and methodology. To a greater extent than [redacted] F colleagues, American scientists have tended to be somewhat provincial in their interest in and knowledge of research in other countries. Nowhere is this more true than in the behavioral sciences--where the provincialism extends not only to research literature but also to the choice of research subjects. In view of the susceptibility of behavioral phenomena to cross-cultural variation, it seems especially important to cross-validate the hypotheses of social science in different societies and cultures. Although some advances have been made in this field in recent years (see [redacted] C), a major obstacle to progress has been the failure, on the part of different investigators, to utilize comparable concepts and methods. It is our belief that such problems of comparability can be best resolved by personal discussions through which colleagues can become acquainted with one another's concepts and methods and so with them, and working agreements reached on standardized categories and procedures in those instances where such standardization seems desirable. Studies of family structure and its relation to family behavior have recently been carried on in [redacted] F

(see below, Section III), and preliminary correspondence indicates considerable interest in the development of the type of exchange and collaboration here proposed.

The summer of 1960 presents especially favorable opportunities for discussion and planning with behavioral scientists from various countries since the [redacted] in the first week in August. In addition, [redacted] We have already received preliminary invitations to present the results of our American research at both of these meetings.

We hope especially to be able to confer with [redacted]-sociologists and psychologists working directly on [redacted] Those include the following: [redacted] We are already in correspondence with several of these people concerning our work and mutual interests. In addition, as time and opportunity permit, we have also to confer with [redacted] We expect to be able to meet several of these people and others as well, at the meetings of [redacted]

2) To enhance possibilities (through informal discussion and observation insofar as this proves possible) for meaningful exchange and, hopefully, future cooperative work bearing on the crucial psychological issues of children and families in [redacted] use of the psychological investigation [redacted] in addition to being a tool, psychologists specializing in the study of children and families, processes, through the accident of birth and upbringing, the advantages of reasonably fluent command of [redacted] language. Child psychology in [redacted] is a very active field; of the approximately 350 psychologists in [redacted], about 50 are engaged in research and application in this area. While most of this work focuses on studies of [redacted] processes and cognitive functions ([redacted] there are indications that considerable attention is being given to what we in America would describe as social psychological questions. As is frequently the case in [redacted] systems, these developments are influenced in part by pressing social problems. Chief among these in the area is juvenile delinquency (reflected in the large number of [redacted] analog to the English "Teddy Boys"), and the difficulty the Government is experiencing in developing and maintaining high motivation among its youth for service and achievement. Both of these concerns are openly reflected in newspaper articles, books and pamphlets (examples cited in Section III D) circulated to [redacted] youth, parents, and teachers, urging and illuminating various psychological techniques for furthering more "constructive" personality development. In informal conversations at [redacted] Moscow colleagues, [redacted] psychologists indicated they considerable want, much of it established, was being done on problems of discipline in family, class room and peer group, and a few studies have appeared in print (see Section III D).

Apart from the tension advantages to be gained from scientific exchange between [redacted] and [redacted] governments, the opportunity to become acquainted with [redacted] in addition to [redacted] in of special interest [redacted] publication of [redacted] presents a crucial case for

some of the hypotheses growing out of our preliminary work. Thus, while in Western societies the family is without question the primary socializing agent, F in [redacted] this responsibility is explicitly vested in the state and the society at large, which in turn delegate only part of this task to parents (for documentation of these and subsequent points in English language sources, see the recent report of [redacted] C or [redacted] B+F

[redacted] which is a nation of working mothers with the result that much of the task of socialization is carried out in group settings. Moreover, the manner in which F this task is performed is not left to chance, for the [redacted] system has developed an explicit technology for the training of children in group situations. Specifically, while Western society relies on an implicit technology of strategic withdrawal of love by the parents [redacted] C F society relies on an analogous process of withdrawal of approval but primarily not by the parent but by the group. This pattern of strategic granting and withdrawal of group approval is epitomized in the procedures of "group criticism" and public confession, which are employed at every level of F the [redacted] social structure from the nursery through, as is well-known, the upper echelons of [redacted] and government. Hypotheses from our own work and from that of others [redacted] F suggest that the nature of conscience and internalized controls would be quite different when the socializing agent is primarily a group rather than one or two particular individuals. It is hoped that by talking with persons concerned with problems of discipline techniques and by observing in schools or other youth organizations, it may be possible to obtain further information on such questions.

F

Although one obviously cannot discover much about such complex phenomena during a few weeks in [redacted] it is our hope at least to become acquainted F with the thinking of [redacted] psychologists and educators on these issues, and, if fortune smiles, to observe discipline techniques as they are used in schools or other group settings. Above all, [redacted] wishes to explore possibilities F for a more extended stay in [redacted] during the [redacted] C while it is highly unlikely, one possibility, by that time, of actually doing some research with [redacted] F children should not be ruled out of consideration.

Plans for the [redacted] F visit will be developed through correspondence with a number of leading [redacted] F psychologists whom [redacted] C at [redacted] B B [redacted] first in [redacted] and more recently in [redacted] D These persons include [redacted] B+F

[redacted] whose experimental work on conflict is well-known in the U. S., and the following child psychologists from various parts of [redacted] F

3) To every end, with a couple of [redacted] F youngsters and their families, a small, comparatively fluid [redacted] F which we intend to make as close to the [redacted] situation [redacted] in our American town. The center of [redacted] F on the [redacted] will be [redacted] and exploring the explicit emphasis is guided primarily by the supposition that in that country it will be possible to find in appreciable [redacted] certain types of family and peer-group structures which are critical to our major hypotheses but which are more difficult to come by in American society.

For example, in [redacted] today there appear to be substantial numbers of families in which one or the other parent has been absent for a long period of time and those which represent extreme patterns of parental authority, both paternal and maternal. Studies carried out by [redacted] sociologists since World War II (see Section III C), as well as the recent observations of one of the applicants [redacted] during a sabbatic year of study in [redacted] (see below), indicate that 1) as a result of the war, families with missing parents of both sexes exist in large numbers; 2) whereas patriarchal families of the traditional type are still to be found in all segments of the society, the challenge to traditional patterns produced by World War II and its aftermath has given rise to a wide range of authority structures including instances of extreme matriarchal and egalitarian forms. At the same time, youth organizations have historically played a far more prominent role as contexts for the socialization of the child in [redacted] sociologists have provided a considerable body of data regarding the nature and function of such organizations in post-war [redacted] society (see Section III F).

As already indicated, the methods to be employed in the [redacted] pilot study will involve adaptations of procedures currently in use in our American work. These include the following:

1) Information on specific aspects of parental behavior is obtained from self-administered inventories filled out by school children during regular class periods. The children's responses provide separate measures for each parent on such variables as affection, control, etc. The measures for the two parents are cross-tabulated to determine the modal typologies of family structure that exist (e. g., dominant mother-disciplining father, undifferentiated role patterns, etc.)

2) Systematic data on the behavioral characteristics of children are obtained from two sources: from teacher ratings, and from sociometric-type questions filled out by the children themselves. Variables measured include responsibility, persistence, aggressiveness, success in influencing others, etc.

3) The above data are supplemented by interviews with sub-samples of families representing the modal types of family structure. These interviews are conducted in the home, separately with each parent and with the child. The purpose of the interviews is to provide a context for evaluating the statistical findings and for gauging the biases unquestionably introduced in children's reports of parental behavior.

Since the principal purpose of the pilot study is to develop and refine appropriate methods rather than to test hypotheses, we plan to administer our techniques on a relatively small sample of families with children in the eighth grade of the [redacted] and in the corresponding class, the [redacted], in this way we shall be able to assess the applicability of our methods to a variety of socioeconomic levels.

Our choice of [redacted] as the locale of this pilot study is also influenced by the fact that we have already established working relationships with social scientists in that country. During the academic year 1956-57 [redacted] served as a [redacted] This year in [redacted] afforded an opportunity to examine various cultural strata of the [redacted] contemporary system and family

F
organization, to learn the language and to acquire a general familiarity with F [redacted] culture, to make a detailed review of the sociological literature dealing with the contemporary [redacted] family, to attend a variety of professional meetings, and to get acquainted with many social scientists and educators in that country. Our sensitivity to the relevance of parental authority structure as one of the key variables in the present research was certainly sharpened by this exposure to the [redacted] family system. It is also hoped that this prior experience will enable us to proceed more wisely in adapting our research designs to a [redacted] setting than we might otherwise hope been able to do. And it is expected that these first hand contacts with many [redacted] social scientists and educators will greatly facilitate the detailed advance planning abroad which will be necessary if our brief but intensive period of field work is to yield its maximum return.

F C
During recent months, [redacted] has been in active correspondence with colleagues in [redacted] concerning the proposed study there. With the assistance C+F of [redacted] language versions of progress reports and of some of our research instruments have already been prepared and circulated for comment among [redacted] social scientists working in this area. Reactions have been generally favorable regarding both the importance and feasibility of our proposed research there. Writing [redacted] a leading family sociologist in [redacted] recently [redacted]

B+F

"....In the years following the war, a whole series of studies of the problems of family authority were published, both by [redacted] and American authors. In the years that followed, since about 1938, the interest in these problems was fairly limited, although the controversies which were raised by these original studies have in the meantime found no real clarification. And so I believe that a basically new attack on this area is highly desirable. Your own research plan seems to me especially positive, since it relates the question of family authority directly to the personality development of the children. I believe that, if we were to classify scientific endeavors in terms of their societal importance, the investigation of these relationships would be considered a very essential problem...."

C+F F
[redacted] whose work on the [redacted] family has closely paralleled our own, writes:

"....I am not only interested in your work, but I am also quite prepared to give you active help if you should need it....people will surely be interested in your questions, and I also feel that among our colleagues there will be a considerable interest in your study."

F
In addition to these general reactions, we have also begun to receive valuable suggestions both for gaining the cooperation of [redacted] schools and for applying our research procedures to the [redacted] situation.

F
After arriving in [redacted] late in May, 1960, both of the principal investigators will plan to remain in this country until all of the basic data from the school children have been collected and the interviews are well under way. During this phase of the work, it is expected that [redacted] would improve the working relationships with schools and families and of

C

coordinating the work of [redacted] assistants, assisted in this task by [redacted] who was born in [redacted] was educated both in that country and in the United States, and who is completely fluent in both languages. [redacted] familiarity, not only with [redacted] language and culture, but also with the details of our own research techniques, has already proved most useful in connection with our advance planning, and her continued assistance will facilitate greatly the successful execution of our project in [redacted].

On the basis of our conferences with [redacted] colleagues, informal observations, and results of the pilot study, the principal investigators plan to design a more extended and structured program of research to be carried out in collaboration with [redacted] co-workers in future years. We plan to take advantage of [redacted] and other leaves of absence in order to give ourselves extended first-hand experience in the field phases of the research.

III. Researches Bearing on the Proposed Study

A. Studies by the Principal Investigators.

The research program out of which this proposal has developed was initiated two and one-half years ago. The first year was devoted to a review of existing theory, methods, and research results bearing on the problem of parental behavior and personality development. The fruits of these initial labors appear in the form of three review articles now published or in press [redacted].

In April, 1953 some 400 students in the tenth grade of the [redacted] responded to a series of self-administered questionnaires designed to yield basic information about their families, with respect to such matters as family organization, types of child rearing techniques employed both by the father and the mother, division of labor between the parents in household tasks, and authority structure in the family. Measures of the behavior and personality of the children themselves were obtained at the same time from teachers' ratings and various extant records. Additional information and independent validation of these assessments of the families and of the subjects was subsequently obtained by means of direct interviews with a sample of the parents and by sets of ratings which the students made on each other.

The papers reporting results of various phases of this study [redacted], and one lengthy article is now in press [redacted]. The findings most relevant to the present proposal come from a recent phase of our data analysis carried out in a doctoral dissertation prepared by [redacted] and attached to this proposal.

B. Studies and Other [redacted] Studies of Family Behavior.

Only in recent years have behavioral scientists begun to include the father along with the mother in their investigations of parent-child relationships and their effects. Even these studies tend to be limited to boys only. The relevant research may be conveniently summarized under three headings.

1) Studies of maternal and paternal behavior viewed separately. While ordinarily the relative role of both parents, these investigations treat each parent separately and make no attempt to consider the family as a system. Perhaps the best examples of such studies are [redacted] recent experimental analysis of the parental behavior correlates of high and low need achievement, and [redacted] research work (1958) on child rearing antecedents of adolescent behavior disorders. The first investigator, taking as a point of departure [redacted] experimental study [redacted] of interaction in families of high and low need-achievers, demonstrates through a series of ingenious experiments conducted in the home that the mother and father of high n-achieving boys play differential roles, with the former being both affectionate and giving and the latter trying to "beckon from ahead rather than push from behind." [redacted] comparing families of delinquent boys with matched controls, reports that "the central feature presented by the aggressive boys was that of a strong dependency conflict and a weak identification with their father."

2) Studies of father absence. While usually including children of both sexes, these investigations have been peculiarly limited in another respect--all but one exclude observations of children's behavior in fantasy in doll play. Nevertheless, all of these studies [redacted] report increased aggressiveness in children, especially in boys, from father-absent homes. Miller's research with [redacted] sailor families (and landlubber controls) is especially noteworthy, since he moves out of the doll house into the home and cites evidence to show that wives of sailors-at-sea tend to be more overprotective than their controls, and that the children are not only less aggressive but make a poorer adjustment to their peers.

3) Studies of effects of family structure on personality development. We were able to find only two studies in which the influence of parental behavior was conceptualized in social structural as against individualistic terms. The most publicized report is a carefully controlled field study by [redacted] of parental behavior in schizophrenia, the major finding being "that schizophrenic patients more frequently than normal persons of comparable background report that their mothers played a very strong authority role and the father a very weak authority role." Finally, [redacted] in an unpublished doctoral dissertation, reports greater sex role differentiation on the part of children from homes in which the parental roles were differentiated.

C. Studies of [redacted] Family and Youth.

Including the classic research of [redacted] and his associates [redacted] students of the [redacted] family have been much concerned with the problem of father absence and presence. Unfortunately, much of this literature has been speculative, circumstantial and polemical in orientation, arguments focusing upon the question whether the actual or potential absence of the [redacted] family [redacted] has led to the pathological personality. Writers like [redacted] have used the evidence provided,

while [redacted] and [redacted] have presented the rebuttal. Virtually the only empirical study bearing directly on this classic debate is that of [redacted], which reports that adolescents with authoritarian leanings are more likely to come from homes with warm-hearted fathers and cold, dominating mothers.

Other studies have questioned the assumed facts of [redacted] patriarchy. Thus [redacted] in a careful review of the literature, concludes that the [redacted] family was probably no more matriarchal than that of [redacted] provide empirical evidence from pre-Hitler times of a wide variety of authority types in the [redacted] family. And many studies, such as those by [redacted] and [redacted] have documented the long history of the movement of [redacted] women towards equal rights and political participation. In any event, after many lengthy and scholarly debates about the marital authority of the husband in the family (see [redacted] the equal power of the wife in family decisions has now at last received legal recognition in a recent supreme court decision.

Several empirical studies during the present decade provide abundant evidence both of heterogeneity and rapid change in the family structure of contemporary [redacted] Thus, thereas [redacted] reported some preponderance of patriarchal families in his [redacted] Triangle, [redacted] and [redacted] found that egalitarian, companionship structure most common in their sample, which consisted mostly of refugee families in the [redacted] area, and [redacted] in his [redacted] study reported on actual predominance of wife-dominated families, especially at working-class levels. [redacted] from a nation-wide sample study, concluded that the trend is definitely toward familial egalitarianism, but that all types of families still exist in [redacted]

Unfortunately these studies provide very little direct evidence regarding the relationships of these various family authority types to parental practices or to child development outcomes, although [redacted] and [redacted] do provide much useful data. Understandably, in the first post-war decade, other factors in the environment of the children seemed far more pressingly relevant: almost a quarter of all the families had been broken out, more than a tenth had lost the father through the war, many millions were in an unsettled, refugee status, millions of mothers were forced to work, and the ideals and ideology of the parental generation were seriously discredited. The concern of [redacted] researchers with the consequences of such factors as these upon the on-coming generation is evidenced in studies by [redacted]

Although there is much of value in these studies, none of them pursues directly the line of investigation projected in the present research proposal.

D. Social Psychological Problems of Children and Families in [redacted]

In [redacted] various social psychology now sociology is accepted as a field in its own right. Nevertheless, [redacted] has recently been concerned with its task; psychological problems and has given considerable time to this problem. The concern is reflected in the production of books and articles primarily by writers and psychologists on such topics as [redacted]

[redacted] The lack of these skills is a parallel [illegible] to the evils of the "stylish" or Teddy Boy way of life. The resulting volumes are addressed to parents, teachers, and group leaders urging them to take a more forceful role in the discipline of the child and to invoke group sanctions as aids in developing appropriate behavior.

Although the most comprehensive collection of psychological research papers to appear in [redacted] in recent years [redacted] devotes over half its pages to child psychology without once intending to social psychological problems, occasional articles have appeared describing "observations" on such topics as [redacted]. Unfortunately, contents of methodology and results in such reports are given short shrift. The best way to discover what [redacted] psychologists are doing in these spheres would appear to be a visit to their research laboratories and observation posts.

Reports by Western students of the behavior of children and families in the [redacted] are limited to interview data from [redacted] émigrés [redacted] analyses of published [redacted] documents [redacted] and digests of impressions gleaned from short visits by persons with varying knowledge of the [redacted] language [redacted]. Easily the most comprehensive account of [redacted] children and families to date, to date, the most comprehensive account of [redacted] children and families [illegible] from a somewhat one-sided choice of informants, who, like the author, were primarily practitioners rather than research workers. Publications by foreign government agencies on the [redacted] educational system (previously cited) contain much useful information on [redacted] family life and disciplinary techniques in schools and other group settings.

May 2, 1960

[redacted]

Dear [redacted]

Unfortunately, I am going to be [redacted] May 5 and 6 instead of the days you will be there, but I hope you will call our [redacted] office, [redacted] and visit with [redacted], our Director of Research, if you have any time at all. I shall be in [redacted] on May 5 and 6 and will miss you in [redacted] as well.

I have no additional information for you on the grant but will try desperately to have word before your departure.

Best regards.

Sincerely yours,

[redacted]
Executive Secretary

C [redacted]

B [redacted]

C Dear [redacted]

Thank you very much for your letter of April 26 and for the enclosures which I shall read with considerable interest. I already knew of some of [redacted] work since [redacted] of our staff was formerly with [redacted] It is very gratifying to learn of the broad scope of research sponsored by [redacted]

I am naturally very pleased that [redacted] is disposed to act favorably on our proposal. I do hope that it will be possible for [redacted] to complete its final action before I leave for [redacted] on the 15th of May. If this should not be possible, please let me know so that we can make arrangements for appropriate administrative action in my absence. [redacted] of [redacted] has indicated her readiness to act for [redacted] in my behalf, and [redacted] whom you know, will be directing research operations at this end throughout the summer and will be fully cognizant of all technical matters. In the event that no final action is possible before the 15th of May, perhaps we could talk over the phone and make interim arrangements. I should mention that I shall probably be in [redacted] on Thursday, May 5, and in [redacted] May 6-10 for [redacted] Since I understand you are frequently in both cities, we might perhaps be able to get together during that time. In any event, it would be a pleasure to meet you in person.

Sincerely yours,

[redacted] C

[redacted] C
