INSTRUCTIONS

1. If funds, in the form of other than U.S. Dollars were on hand, received, or disbursed during the accounting period, all pertinent data, i.e., rate, method of acquisition, etc., must be shown. If advances have been made to third parties, enter the total of such advances outstanding at the beginning of the accounting period on line 1a.

2. If more space is required to explain receipts, prepare receipt form, number and attach hereto. In every case, completely identify the source of receipts.

3. Attach a voucher for each expenditure and assign a number thereto in numerical sequence. The voucher may be the receipt obtained from the payee. When a receipt is not obtained, prepare a certificate and attach as a voucher. When space on form is not sufficient to list all vouchers, prepare a listing on a separate sheet and enter the total under item 3. If advances to third parties are outstanding at the close of the accounting period, attach an itemized list and enter the total on line 3a.

4. Final credit will not be given for disbursements which are advances to be accounted for. When accounting for advances are obtained, list as expenditures or refund of cash, as appropriate.

5. Total receipts entered on the line "Total to Account For" must agree with the total disbursements entered on the line following "Total Accounted For."

DRAFT [redacted]
17 August 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 121

1. It is requested that Subproject 121 be approved to support the research program of [redacted] in accordance with the attached proposal.

2. This study will add somewhat to our understanding of native [redacted] psychiatry including the use of drugs, many of which are unknown or not much used by Western practitioners. It will also assist in the identification of promising young [redacted] who may at any time be of direct interest to the Agency. [redacted] will be located in [redacted] thus carrying out the plan of developing [redacted] as a world-wide organization. Since [redacted] will learn the [redacted] language, this project offers a potential facility for [redacted] project, MKULTRA, Subproject 95.

3. This project will be funded through [redacted] for security and cover purposes and the accountings for funds expended in it shall conform to the established procedures of that organization. It is not anticipated that any permanent equipment will be required for the project.

4. The total cost of this project for a period of eighteen months is estimated to be $13,850.00 as indicated in the attached budget. Charges should be made against Allotment 1525-1009-1902. [redacted]

[redacted]

[redacted]

B/E [redacted] has indicated that they would be interested in the study and would be able to help defray some of the expenses. In this event the project may be completed at a reduced cost. In any case all unused funds will be returned to [redacted]B at the completion of this project.

4. No cleared or witting persons are concerned with the conduct of this project.

[redacted]

"The position of these practitioners in the future, vis a vis the organization of proper mental health services, because of the public esteem in which they are held and because they at present and probably for some time, will fill with some success a great want, is likely to be, or so it seems to the writer, a matter of some concern and difficulty, calling for patience, tact and goodwill."

Dr.R. Cunyngham Brown, C.B.E., 1938.

It is proposed to study [redacted] along the following lines:

(1) The basic theories about mental illness and its treatment.

(2) Efficacy of the [redacted] disturbances.

(3) The investigation of the possibility of some type of integration of the [redacted] (particularly the practitioners who treat psychiatric disorders) with Western type psychiatric services.

BACKGROUND

Between September 1957 and May 1959, I worked as a government psychiatrist for the Western Region [redacted] During my stay there, I became very much interested in the methods which the indigenous peoples employed for the treatment of mental disturbances and the cultural mechanisms which they have developed for the preservation of mental health. A general description of the [redacted] scene was given in a letter to the editor, [redacted] Other publications which resulted from this tour of duty were:

(1) The [redacted] usage of magical words and their defences against them [redacted] in press.)

(2) A distinctive type of psychoneurosis occurring among [redacted] students [redacted] in press).

(3) [redacted] H/F

[redacted] H/F in press.

OUTLINE AND PURPOSE OF THE STUDY

Today [redacted] H/F there are two general types of approach to the treatment of psychiatric illness:

(1) Government Medical Services: Psychiatric treatment using Western theories of illness and treatment procedures. Because of limited facilities, government services deal with only a small fraction of the total psychiatric disturbance in the country. There is only one contemporary type Western Hospital [redacted] B with 200 beds, and one Western trained psychiatrist. There are also ten "Lunatic Asylums" where handling of patients is largely custodial. The population of the country is about 30 million.

(2) Traditional [redacted] H/F Treatment: Most of the treatment then devolves upon the [redacted] H/F can be divided into two types, the [redacted] H/F and the [redacted] H/F

(a) [redacted] H/F relies heavily upon magical methods of diagnosis and treatment. He is a priest of the [redacted] and uses an elaborate method of divination for diagnostic purposes. These divination methods are described by [redacted] C Treatment is based on theory of cessation and may be directed, for example, (1) at appeasement of an offended witch, (2) at propitiating an angry ancestor, (3) providing a defense against some malevolently used word magic, such as curse or invocation etc.

(b) [redacted] H/F uses largely herbal methods of treatment. Some of these are used on a magical basis but others seem to have physiological activity. For example many observers have noted that the [redacted] H/F

[redacted] employs some potent sedative drugs in the treatment of psychoses [redacted]. The applicant obtained some specimens of one of the plants used for sedative purposes and discovered it to be a species of [redacted] have documented and discussed some of the herbs employed in [redacted]

There is a considerable degree of specialization in [redacted] traditional medicine, some doctors restricting their practice to eye diseases, others to Tubercular lymph nodes and many to the treatment of psychiatric disturbances. Treatment methods are largely family secrets and handed down from father to son.

Efficacy of Treatment by Traditional Means:

There has been very little attempt to appraise the results of Traditional [redacted] Psychiatric Treatment. The popularly held belief among the people is that Western Medicine is good for physical illnesses, but that Traditional medicine is much superior in dealing with psychiatric disturbances. This may be due to the fact that the [redacted] Doctor has been using [redacted] compounds (and perhaps other efficacious drugs) for many years, whereas they have been only recently introduced into Western medicine. [redacted] spent two months touring [redacted] to investigate the psychiatric services there; regarding one of the [redacted] native practitioners he visited, he comments:

"I am convinced that, within the framework of the rather highly developed indigenous culture of this area, this man is doing a necessary job of work as humanely and intelligently as possible, and it is even not improbable that some of the techniques that

are practised by him and others like him might be of general value."

[redacted] commented favourably upon his observations of successful treatment of some psychoneuroses by [redacted] doctors.

Procedures employed by native doctors in other cultures have been more fully investigated. [redacted] has described the psychotherapy of some of the native practitioners in [redacted] has described the treatment practices of the [redacted] man in the [redacted] and [redacted] the treatment of "magical fright", a kind of psychoneurosis in [redacted] These writers emphasize the efficacy of the psychotherapy of the native practitioner. The subject of primitive medicine generally has been reviewed by [redacted]

The Possibility of Integration:

From what has been said, it is clear that in [redacted] and in other underdeveloped countries, Western type psychiatric treatment facilities are very meagre and that traditional native treatment is characterized by its high prestige among the people.

Consequently, the question may be raised whether instead of embarking upon an extensive building program of Western type mental hospitals, it may not be advisable or even preferable, to absorb the native practitioners, their treatment centres and appropriate portions of their treatment practices into the overall Mental Health Program. Such a move would be in line with the contemporary Euro-American trend towards treating psychiatric patients outside the hospital, i.e. in day hospitals and out-patient clinics, thereby avoiding the undesirable concomitants of hospitilization such as dasocialization, "nestling" within the hospital, and rehabilitation difficulties. Native

practitioners could be selected, given some rudimentary Western type training, officially licensed, and their treatment centres supervised and expanded.

Kenny[1] (1958) who favours such a proposal states:

"....Another method of supplementing our medical strength is to make use of our traditional herbalists and physicians. Their system of training and licensing can be vigorously studied and modified..... If this implies that much secret knowledge will see the light of day it is welcome. Furthermore this must result in the separation of magicians and sorcerers from genuine herbalists with a deep knowledge of herbalism. It is unlikely that traditional physicians will add more to the analytical method of clinical investigation based on firm basic sciences like anatomy, physiology and pathology. They are however, a "high priesthood" to whom people will confide their complaints. This is still one of the basic functions of even the most scientific doctors for many human complaints are ill understood or incurable, and many have roleeis in organic disease. There can be little ground for professional jealousy. We should however, strive to see that many of the naive and often harmful therapeutic practices undertaken by them are stopped. The example of the [redacted] medical profession is worth noting, for traditional physicians are employed in their general hospitals and they are said to be a huge success."

The situation now existing in [redacted] parallels that in many other parts of the world (elsewhere in [redacted] in many parts of [redacted] the [redacted] etc.) It is probable that investigations and solutions to these problems in [redacted] would be of value in these other areas.

METHOD OF STUDY

The first step in such a program would be to investigate what the [redacted] believes about the causation of mental illness, what he does to prevent and treat it, and to study the efficacy of his treatment and preventions. To this end, it is proposed to proceed along the following four lines:

(1) Interview 25 [redacted] Doctors who specialize in the treatment of mental illnesses.

(2) Visit and study their treatment centres.

(3) Live in the homes of two of the more important practitioners for periods of two months each.

(4) Interview 100 patients suffering from psychiatric disturbances who have been treated by native methods.

(1) INTERVIEWS WITH [redacted] DOCTORS

From these interviews information would be obtained about the [redacted] practitioners concept of causation, and about his diagnostic and treatment methods. An attempt would be made to obtain answers to the following questions:

(a) In your opinion, what are the principal causes of mental illnesses?

(b) How do you go about diagnosing the cause of the mental illness of the particular patient?

(c) Describe in detail the methods you use to treat the different types of mental illness.

(d) Do you classify and treat diseases according to cause or according to some other principle?

(e) In your opinion, are all illnesses equally amenable to treatment, and if not, how do they differ?

(f) What aspects of your treatment do you consider to be most important (i.e., drugs, magic, etc.)?

(g) Do you think the incidence of mental illness is increasing, decreasing or constant in [redacted]

(2) STUDY OF TREATMENT CENTRES

Visits to treatment centres would yield information as to number and diagnosis of patients and effectiveness of therapy. Note could also be made of undesirable treatment methods according to Western thinking, e.g. shackling, use of dangerous drugs and disfiguring practices.

(3) LIVING WITH [redacted] PRACTITIONERS

In addition to these shorter interviews and visits, it would be

desirable to spend a few weeks living in the homes of two or three of the more successful practitioners. I know this to be a practicable plan because on my former acquaintance with the [redacted] I found them most hospitable and eager to discuss their ideas and practices. I lived with one doctor for two weeks and found the arrangement much more productive of information than the more casual contact. Concrete information about treatment practices and their efficacy would best be obtained in this way.

(4) INTERVIEWS WITH PATIENTS

It is proposed to interview 50 patients who are actually undergoing treatment at the various [redacted] treatment centres, and 50 patients attending the [redacted] (most of the patients receiving treatment at [redacted] have had former treatment under [redacted] Therapists.) The areas to be covered in these interviews are indicated by the following questions.

(a) What do you think caused your illness?

(b) How did you arrive at this opinion?

(c) Describe the treatment you received at the [redacted]

(d) Do you think your treatment was of value?

(e) Did you find any aspects of your treatment harmful or particularly uncomfortable?

FURTHER COMMENTS

One of the major difficulties with this type of study is that of language. [redacted] is a difficult tonal language, and most of the [redacted] do not speak English. I have made some headway in learning the language, but my present knowledge is far from adequate. I propose to spend three months studying [redacted] at the [redacted] languages before going to [redacted]

121-14

[redacted] of the [redacted] has indicated that he would be interested in allowing me to work with the [redacted], and that the [redacted] would be able to help defray some of the expenses of travel etc. (see letter enclosed).

121-14

[redacted]

12th November, 1959.

[redacted]

It was very nice to hear from you in your letter of November 6th.

You already know from our conversations that I should welcome very much the possibility of your returning to [redacted] to study [redacted] in association with this [redacted] (I think that the best arrangement would be with the [redacted] rather than with the [redacted]). We here would do all we possibly could to help and there would be the advantage that we now have on the staff [redacted] but it makes no difference for this purpose) [redacted] who is an anthropologist, who would be likely to be of considerable assistance to your work.

Living accommodation is a difficult question here at present but we should certainly bend every effort to get accommodation for you and the prospect after the next couple of months would be reasonably bright. In this connection, it would be helpful if you could let me have an idea of when you would be likely to come and whether you will be bringing your family; also for how long you would be likely to come.

Regarding research monies to bolster what might be available from [redacted] would unfortunately not be able to run to a salary, but could certainly help with research expenses, travelling and so forth and it might also be possible to make available some amount of other assistance. We should do the utmost in this connection.

/This

P.S. How will I talk to you about a personal letter to me only.

121-14

- 2 -

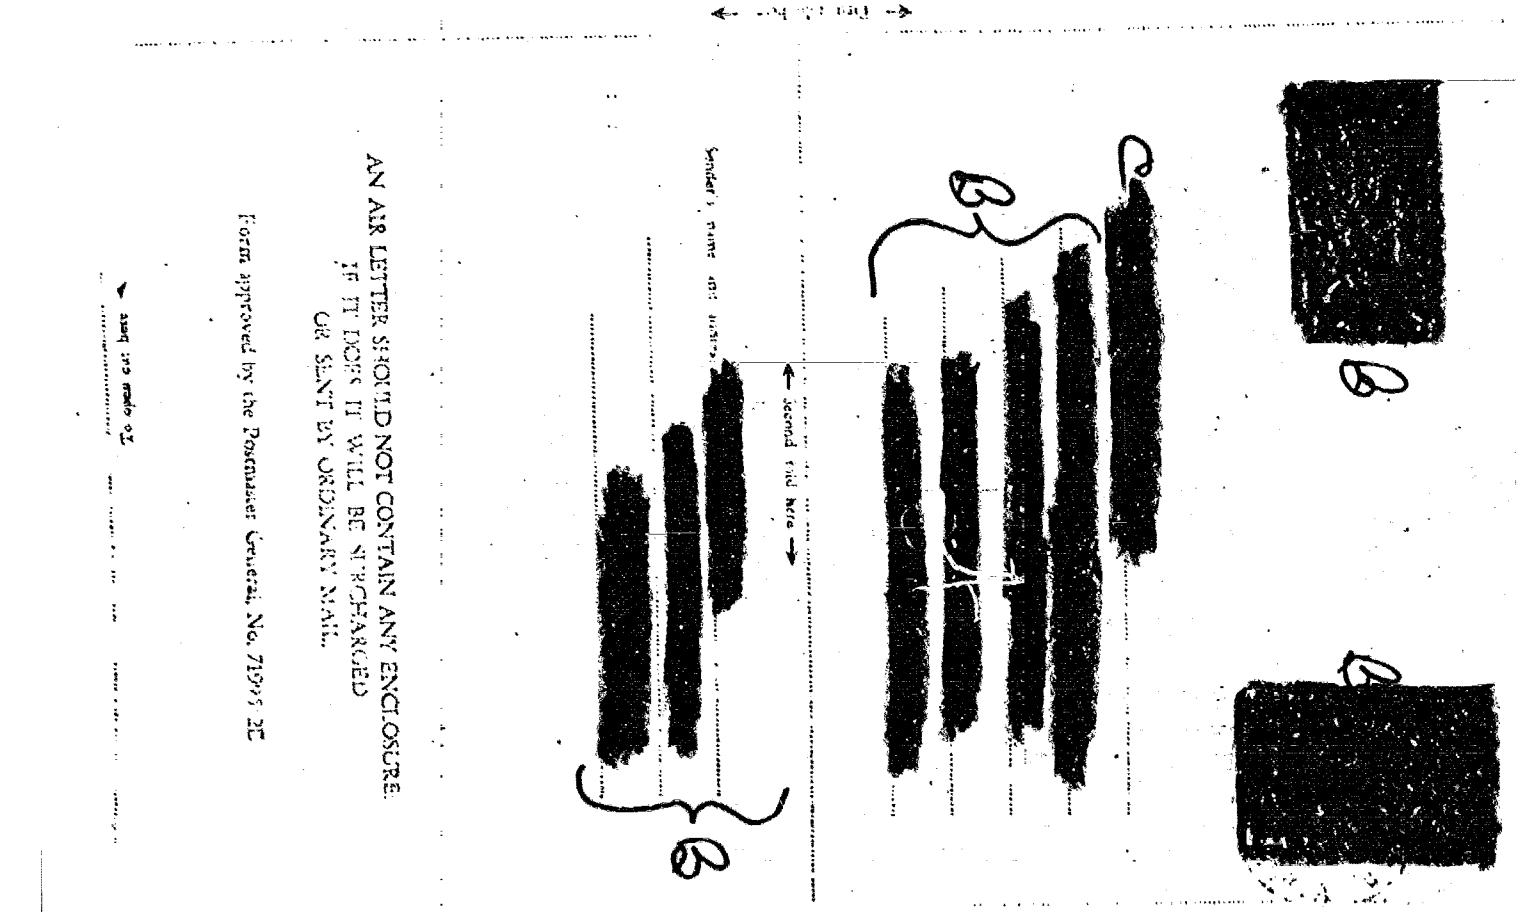

This [redacted] is very interested in your proposal for work in the field you have mentioned and I hope that you will pursue it. We should welcome the further details which you mention and should be happy to have [redacted] take the matter up with the [redacted] officially.

With very best wishes,

Yours sincerely,

[redacted]

[redacted]

BUDGET

It is proposed to spend 15 months in [redacted] and 3 months in [redacted]

(1)	Salary	$7,000.00 per annum Total for 18 months		$10,500.00
(2)	Automobile	Volkswagen $1,700.00 which could be sold at the completion of the study for about $850.00	Balance	850.00
(3)	Transportation	Self, wife and two children to and from [redacted]		2,000.00
(4)	Extra expenses	(Interpreter, gifts for chiefs etc.)		500.00
			Total:	$13,850.00

[redacted]

9 August 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : Discussion with [redacted], Chief, [redacted] Division, and [redacted], Chief of [redacted] on Utilization of [redacted] Assets

1. On Monday, 8 August, the writer discussed this problem with [redacted] and [redacted] after a meeting between [redacted] and these two gentelmen which had been held last week.

2. The writer ascertained that both the gentelmen feel that [redacted] ideas and activities in connection with [redacted] affairs are very sound and they think very highly of [redacted] abilities. However, they feel that most of [redacted] interests are in areas (economics, rehabilitation, public health, etc.) which are completely outside of the Agency's mission in [redacted] at least in terms of giving [redacted] encouragement, guidance and support in these areas. They did indicate, however, that the several possibilities for placing an Agency controlled asset [redacted] with the [redacted] had potential for [redacted] Division and that they were being seriously considered. They feel that it would be helpful to again explain to [redacted] the difference between the DD/P goals and needs in this area and the overall program of the [redacted]

3. The writer then explained our present feelings about the potential for [redacted] in accomplishing [redacted] research goals in [redacted], along with the concomitant by product possibilities of assessing and ultimately recruiting the occasional attractive operational asset that might turn up in such an activity. It was pointed out that the [redacted] Division did not need to feel any greater responsibility for these developing activities beyond helping us to the extent of a general indication of geographical areas of interest and substantive problems on which research is needed. In this context, the following remarks were made:

a. [redacted] pointed out that he felt that any research projects which placed a [redacted] person in any of the following areas on a valid research mission would have potential for some of the [redacted] Division's current problems: [redacted] Aside from substantive questions in these areas any information developed about personalities emerging as leaders is badly needed.

[redacted]

[redacted]

b. A second point that was made was that no further demographic studies in [redacted] are needed. In this connection it was indicated that both the [redacted] and [redacted] proposals are good and moved in the right direction.

c. [redacted] indicated that he felt the best attitude for both them and us to take at present would be to look upon a small group of [redacted] projects undertaken this year as pilot studies, later to be reviewed for their substantive and operational attractiveness as the basis for future [redacted] activities.

d. [redacted] said that whenever we see an individual slated to go to [redacted] that we size up as an attractive operational asset, we should so indicate to the [redacted] Division who will contact him completely independently of any of his [redacted] contacts. This is preferably done in this country but can also validly be done when he gets to [redacted].

4. The writer requested a general guide for our benefit in soliciting and screening research proposals for [redacted] which would reflect the [redacted] Division's feelings about their substantive research needs in [redacted]. [redacted] agreed to furnish us with such a paper.

MEMORANDUM FOR: THE RECORD

SUBJECT : Discussion with [redacted] of [redacted] Division the [redacted] and [redacted] Proposals

1. At 1130 I met with [redacted] of the [redacted] Division to inform him of our intention to support the proposals of [redacted] and [redacted]. I told [redacted] that in the course of developing our "new look" we were making every effort to keep interested Agency components and DDP area divisions informed of research projects being sponsored. This would give them an opportunity to "piggy back" such projects operationally if there was a need to do so.

2. [redacted] reaction was relatively non-committal. He commented initially that as long as it was not his money he was not going to offer any critique. He noted names of principals, geographical areas, tentative dates for starting research, etc. He thanked me and said that he would appreciate being kept informed periodically.

MEMORANDUM FOR: THE RECORD

SUBJECT : Approval of [redacted]

ATTENDANCE : [redacted], Gottlieb, [redacted] and [redacted]

SUMMARY : Request for $13,850 to initiate [redacted] study through the [redacted] funding mechanism was was approved. This research offers a potential for studying the use of certain drugs as well as the nature of psychiatric syndrome within a primitive [redacted] setting. In addition, the research is related to some aspects of work being done by [redacted] on Cross-Cultural Meaning Systems. [redacted] who will learn the [redacted] language could provide a field setting for expanding [redacted] research into this highly important area of the world.

Other advantages to this research project include expansion of the [redacted] world activities, potential direct intelligence take and useful contacts in what may become an area of intelligence activity.

There were no suggestions for change in the research proposal.
