Project MKULTRA, Subproject 135

Date Initiated: 15 September 1961

Date Expires: 1 October 1962

Funds-current year: $24,870.00

Purpose: To provide for investigations involving clinical testing of volunteers in programs of TSD interest. The project will provide a facility and a team of medical supervisors as well as a large stable reservoir of volunteers.

Status: Project is approved but has not been activated. Activation will be attempted by 1 September 1961.

MEMORANDUM FOR: COMPTROLLER

ATTENTION : Finance Division

SUBJECT : MKULTRA, Subproject 135

Under the authority granted in the memorandum dated 16 June 1961 from the DCI to the DD/A, and the extension of this authority in subsequent memoranda, Subproject 135 has been approved and $25,868.00 of the over-all MKULTRA project funds has been obligated to cover the subproject expenses. This obligation of funds should be charged to Allotment 2125-1390-3902.

11 June 1964

MEMORANDUM FOR : THE RECORD

SUBJECT : MKULTRA Subprojects 70, 91, 94 and 135

Since the completion of the audit of Project MKULTRA for the period 1 August 1960 through 31 January 1963, accountings have been received from [redacted] in the amount of $93,677.50. This amount [redacted] of the $193,117.93 balance to be accounted for by [redacted] grantees at the end of the audit period. B

Subproject 70 incurred direct costs of $2,518.34 and $27,872.16 transferred from Subproject 94, for a total of $30,390.50. Subproject 94 incurred expenses of $71,324.87, but transferred $4,165.71 to Subproject 91 and $27,872.16 to Subproject 70, leaving a net cost of $39,287.00. It was decided to divert the funds for Subproject 135 to Subproject 91, therefore these costs were included in the accounting from Subproject 91.

Inasmuch as: 1) all four of the subprojects had the same basic research goal in mind, 2) the great length of time that has elapsed since the grants were made, and 3) the difficulty in getting accountings of any sort from the grantee, it is recommended that we facilitate this matter by accounting for the balances as shown in the Confidential Funds Division 760 account for these subprojects.

The above has been concurred in by [redacted] the Audit Staff. A

[redacted]
Chief Scientist, TSD

Gentlemen:

We are pleased to be able to transmit to you the following funds:

E { [redacted] dated August 11, 1961, drawn [redacted] for $24,870.00.

[redacted] dated August 11, 1961, drawn [redacted] for $998.00.

These funds represent a contribution for the use of your directors in carrying out the very worthwhile research goals of your obligations.

Yours truly,

MEMORANDUM FOR: THE RECORD

SUBJECT : Project MKULTRA, Subproject No. 135,
Change of Facility in which Work is Performed

1. The original purpose of this subproject was to evaluate a number of candidate chemical agents in facilities and under the direction of individuals who, it later developed, became unavailable for this purpose due to unforeseen circumstances.

2. In the meantime, the funds for this subproject were transferred to the cutout in anticipation of the commencement of the work.

3. In view of the security difficulties involved in the actual return of funds from the cutout and also since another subproject (#91) was being served by the same cutout, and furthermore, since subproject #91 was capable of providing its services on these chemical agents of interest and during the same fiscal year, it has been decided to divert the work intended for subproject #135 to the facilities of subproject #91. No significant change in funding or variation in fiscal year is concerned in this matter.

DRAFT

16 June 1961

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 135

1. The purpose of this subproject is to provide funds to carry out a research program involving utilization of human volunteer subjects.

2. This program is designed to exploit clinical and laboratory facilities and professional knowledge in providing answers to specific questions of direct interest to the Agency. The nature of the investigations to be carried out encompasses pharmacological and clinical testing in human volunteers of chemicals, biochemicals, and biologically active materials under controlled conditions. For example, human patch testing or human blood group determinations will be mounted upon setting up a suitably designed experiment.

3. The investigations will be carried out under the general supervision of [redacted] This individual will serve as project leader and coordinate all phases of the research program, select and provide clinicians to conduct the experiments, assist in planning the experimental design and protocol, and supervise the preparation of data and reports. The attached proposal indicates the nature and extent of some of the investigations that will be carried out.

[redacted]

[redacted]

4. The funds for this project will be transferred using th[redacted] B

[redacted] a cut-out.

5. The cost of this program for a period of one year beginning 1 July 1961 will not exceed $24,870.00. To this sum must be added $998.00 representing a 4% service charge to th[redacted] B [redacted] who will act as a cut-out, making the total amount $25,868.00. Charges should be made against allotment #2125-1390-3902.

6. The [redacted] will require the principal investigator who administers the grant to submit to them a summary accounting upon an annual basis of all monies received from the [redacted] B Also they will require that any unexpended funds be returned as soon as possible upon the close of the grant year.

7. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

8. It is not anticipated that any permanent equipment will be required for this program.

9. It has been agreed that documentation and accounting for travel expenses which are reimbursable shall conform to accepted practices.

10. It is agreed that technical reports reflecting the progress of the research program will be accepted at mutually accepted intervals.

11 [redacted] as signed a memorandum of agreement and holds a C TOP SECRET Agency Security Agreement. The project will be unclassified after it reaches the [redacted] B

PROPOSAL

OBJECTIVE : To establish a professional organization for the primary purpose of servicing and conducting complete clinical evaluations and testings upon demand.

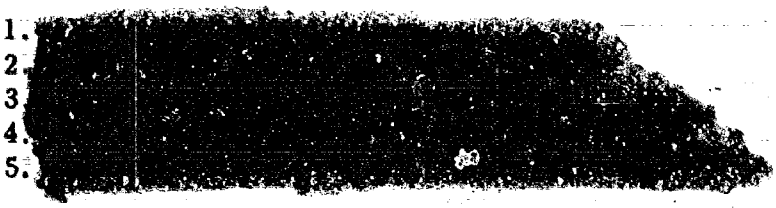

In addition to prescribed activities, to maintain itself on a standby basis and to be able to mount clinical projects on an ad hoc basis.

PROCEDURE : see attached sample protocol for patch testing.

CLINICAL FACILITIES :

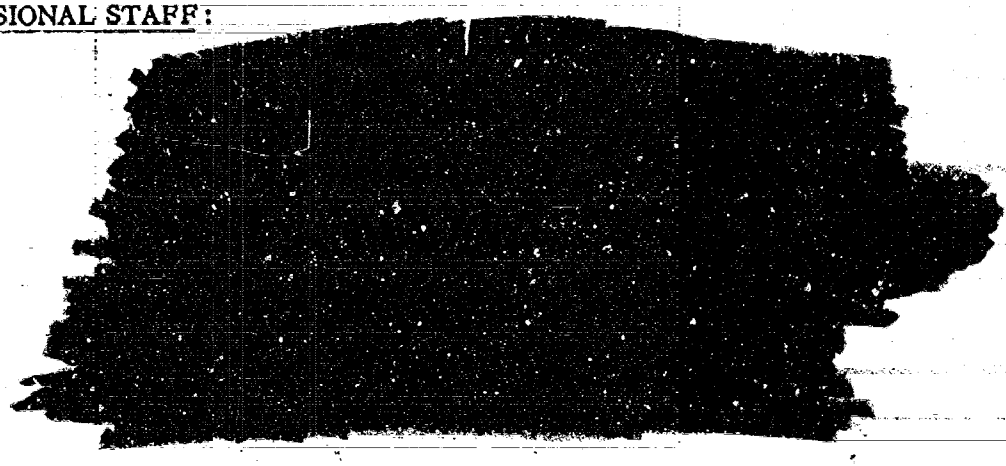

LABORATORY FACILITIES :

135-16

PROFESSIONAL STAFF:

BUDGET : (12 months period)

Principal investigator	10,000.00
Professional staff	6,200.00
Secretarial	1,800.00
Expendables, chemicals, supplies	1,600.00
Clinical subjects, fees	2,500.00
Travel, maintenance	2,300.00
Insurance, malpractice & liability	470.00
Total	24,870.00

no overhead or fee

135-16

PROTOCOL

OBJECTIVE:

To determine whether an unknown compound, either chemical or biological, is capable of eliciting a reaction when applied topically to the skin, either locally or systemically, or both.

BACKGROUND:

If the skin is able to deal with the irritant compound, the reaction is physiological or normal. However, if the action of the irritant is excessive, the reaction is pathological or abnormal and irritation results. Irritation is an extreme reaction of tissues to an insult or injury and is best characterized as incipient inflammation. The inflammatory process may vary from a barely perceptible hyperemia, to edema formation and vesiculation and finally to a suppurative process.

A primary irritant may be defined as a substance producing an injury on first contact. The resultant injury will depend on the nature of the irritant, concentration of the irritant, and the total elapsed time of exposure. Primary irritation of the skin is usually measured experimentally by the patch test technique on abraded or intact skin of the experimental animal, for example, rabbits, guinea pigs or man.

Exposure of man is predicated on small animal studies used to screen all compounds to be tested to obviate exposing man to severely sensitizing substances. Granted, in the case of compounds which may be only mildly sensitizing or in which small animal studies are unable to furnish unequivocal results, man may appear to be the only feasible final test subject.

Animal experimentation data should include acute, subacute and chronic dermal toxicity experimentation that will allow some logical assessment of the local and systemic toxicity of substances to be applied topically to man in the proper amounts, concentration and frequency of application that may be tolerated.

PROCEDURE:

For pilot studies, human testing should employ 20 test subjects per compound tested. Prior to experimental testing, maximum efforts must be made to minimize the risk of incurring unforseeable sensitivities and untoward responses by establishing a base line profile that will encompass the following:

1. Complete medical histories with emphasis on known sensitivities and drug idiosyncracies.
2. Preliminary physicial examination
3. Hematological evaluation (complete blood count)
4. Urinalysis (microscopic)
5. Radiological screening (chest and long bone)

Acute dermal toxicity. (Single exposure or primary irritation)

This will utilize the patch test technique on intact skin on a minimum of five subjects per test compound.

Methodology will consist of introducing under a one inch patch 0.5 ml (liquid) or 0.5 gm (solid or semi-solid) of test substance and securing the patch in place with non-sensitizing adhesive.

After 24 hours, the patch is removed and readings made on the resultant reactions evaluated on the basis of the following scores:

Evaluation of Skin Reactions

1. Erythema and Eschar Formation

No erythema	0
Very slight erythema (barely perceptible)	1
Well defined erythema	2
Moderate to severe erythema	3
Severe erythema (beet redness) to	4
Slight eschar formation (injuries in depth)	4
Total possible erythema score	4

2. Edema Formation

No edema	0
Very slight edema (barely perceptible)	1
Slight edema (edges of wall well defined, raised)	2
Moderate edema (raised approx 1 mm)	3
Severe edema (raised more than 1 mm and extending beyond area of exposure)	4
Total possible edema score	4

Readings are again made after 72 hours of exposure. The final score represents the average of 24-72 hour readings.
