B

Dear Dr. [redacted] C

Enclosed you will find a report of expenditures of monies received from the [redacted] for the period July 1, 1955, to June 30, 1956. This report has been signed by both Dr. [redacted] and myself. B

The grant received from your organization was overexpended in the amount of $442.79 due to fulfillment of committments of a twelve-month salary agreement with technicians working on this project. Please advise me if it will be at all possible for this amount of overexpenditure to be approved. Your favorable consideration in this matter will be greatly appreciated.

Once again I wish to apologize for the delay in submitting this information and I sincerely hope that it has not inconvenienced you too much.

Sincerely yours,

[redacted] C

Business Administrator

[redacted] H

Enclosure 1

STANDARD FORM NO. 64 Back to Chief 4/3-3

Office Memorandum ~~UNITED STATES GOVERNMENT~~

TO : [redacted] C Feel this should be handled by drugs in section 7 hypnosis - and scale down accordingly [redacted]

FROM : [redacted] H DATE: 4 March 53 H.

SUBJECT: Ref pt I - We have no reports to date. As far as I know - there has been very little expt'l to date (as implied in B)

Ref pt II - Here is a proposal ala [redacted] C

Ref pt III - meaningless —

B ix [redacted] The "special laboratory" is to be the build of research under the auspices of the [redacted] C (Provided he gets the grant from the [redacted]) C

(over)

To me – The budget is out of line for what we have in mind, namely, testing effects and influence of certain drugs on hypnotizability:

Dr Jaimes to [redacted], C all this should be gone over thoroughly with him – in detail. Will do within next 2-3 wks.

[redacted] C.

B

H

29 February, 56 FILE SUB #3

[redacted] C
B

Dear [redacted] S.G.

Enclosed is the research proposal for the [redacted] that we discussed. I'd appreciate it if you will forward it to the appropriate individuals at the [redacted] when you are through with it, if such be necessary. B

There are some indications in the proposal of our findings from the present year. The formal report for the year's work will be submitted later in the spring. Under the circumstances I realize the importance of getting the proposal for the next fiscal year into the works.

Up to today I have been working very hard on my assigned investigation of POW problems for the Air Force. Some most interesting things have turned up in the process of this study, bearing upon potential research issues of mutual interest to all concerned.

It is possible that I may be in Washington again in the very near future. [redacted] will know about it before I will; if you want to see me, get in touch with him and find out whether the Surgeon General is g oing to be calling me up there next week. C

Best personal regards.

Sincerely yours,

[redacted] C

[redacted], M.D.

[redacted], M.D.
Professor of Psychiatry
Principal Investigator

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

I. CONTINUATION OF STUDIES ON HYPNOSIS AND SUGGESTIBILITY

A. Preliminary clinical research during 1955-56 has yielded promising leads in terms of knowledge of how hypnotizability can be influenced by pharmacological means. Several drugs have been identified that apparently are effective in speeding the induction of the hypnotic state, and in deepening the trance that can be produced in given subjects. These observations remain to be confirmed through studies of larger numbers of normal subjects, and insofar as possible, quantified. Observations have also been made of drugs that provide some degree of immunity to hypnotic influence. These investigations also require considerable elaboration.

B. It is proposed that the experiments begun during 1955-56 involving hypnotizability, suggestibility, and the roles of certain drugs in altering these attributes, be continued and extended during 1956-67.

II. NEW STUDIES ON THE NATURE OF HYPNOSIS, SUGGESTIBILITY, AND TRANCE-LIKE STATES

A. Experiments involving altered personality function as a result of environmental manipulation (chiefly sensory isolation) have yielded promising leads in terms of suggestibility and the production of trance-like states. There is reason to believe that environmental manipulations can affect the tendencies for dissociative phenomena to occur. Isolation, in particular, can markedly change the individual's response to suggestion in the form of verbal communication.

B. It is proposed that new experiments utilizing special environmental manipulations, including sensory isolation, be begun with a view to-

WARNING NOTICE
SENSITIVE INTELLIGENCE

ward determining the ways in which the resultant psychophysiological alterations can be quantified, and the ways in which these altered states can be utilized in the production of increased influenceability in normal subjects.

III. NEW STUDIES OF PSYCHOPHYSIOLOGICAL RELATIONSHIPS AND REACTIONS TO STRESS, EMPLOYING HYPNOTIC TECHNIQUES

A. Current experiments have definitely established a number of ways in which hypnotic suggestions can bring about states of marked psychological stress in suitable subjects, with resultant changes in neurophysiological and neuro-endocrinological function. It has also been shown in preliminary studies that hypnotic methods can successfully be employed to protect individuals from the psychophysiological reactions to noxious stimulation. These observations constitute an indication that more control can be exerted over the autonomic nervous system than has been previously supposed. Coupled with the recent development of autonomic drugs of highly specific activity it is now possible to isolate more precisely than ever before the exact means by which and the precise degree to which psychophysiological reactions occur to specific types of stress.

B. It is proposed that the combined use of hypnotic techniques and autonomic drugs be exercised in initiating some original studies on the nature of psychophysiological reactions to stress.

WARNING NOTICE
SENSITIVE INTELLIGENCE

IV. TECHNICAL CONSIDERATIONS

All of the above-recommended experimental procedures will require special equipment, special methodologies, and special skills. In order to make possible a continuing research program in this area, a psycho-

physiological research team is being developed at the [redacted]. Facilities of the [redacted], and the [redacted] are available. However, within the overall framework of these facilities, a unique laboratory must be organized and constructed. This laboratory will include a special chamber, in which all psychologically significant aspects of the environment can be controlled. This chamber will contain, among other things, a broad-spectrum polygraph for simultaneous recordings of a variety of psychophysiological reactions of the individual being studied. In this setting the various hypnotic, pharmacolcgic, and sansory-environmental variables will be manipulated in a controlled fashion and quantitative continuous recordings of the reactions of the experimental subjects will be made. Under these conditions, and with the utilization of the special skills of the research team, it is expected that some significant original and valuable observations will be obtained.

MEMORANDUM FOR: THE RECORD

SUBJECT : Addendum to Subproject 43

1. The purpose of this addendum is to set forth the mutual administrative responsibilities of the contractor and sponsor.

2. The above subproject represents the research program of Dr. [redacted] located at the [redacted] B financed under MKULTRA, covering the period 31 March 1955 through 31 March 1956.

3. The [redacted] has requested the Foundation to submit to them a summary accounting of monies received from the Fund. Also, they requested the return of any unexpended funds received under a grant from the Fund.

4. Title to any permanent equipment purchased by funds granted the Foundation shall be retained by the Foundation in lieu of higher overhead rates.

5. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the Foundation shall conform with the accepted practices of that Foundation.

6. It was agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

MEMORANDUM OF AGREEMENT

The purpose of this Memorandum of Agreement is to set forth the mutual administrative responsibilities of the principal research investigator and the sponsor. Therefore, it is mutually agreed that,

A. The principal investigator shall submit to the sponsor, at six month intervals, an informal statement of expenditures of monies advanced for research activities. It is requested that the statement be submitted in essentially the following form:

Personal compensation
Salaries
Fees, Subject

Equipment

Supplies and Services

Contingencies

Overhead

B. It is understood that any travel expenses incurred in the furtherance of the research program will be accounted to the University in a manner consistent with its established practices and policies.

C. The principal investigator shall submit to the sponsor semi-annual reports on the technical progress of the research covered by these funds.

SUBJECT : Project MKULTRA, Subproject 43
Invoice 2, Allotment 5-2502-10-001.

1. Invoice No. 2 for Subproject 43 of Project MKULTRA is attached. This invoice is the final one to be submitted under Subproject 43, and when paid constitutes complete payment of this project.

2. It is requested that payment be made by two cashier's checks drawn on a [redacted] bank, one in the amount of $13,333.34, and the second check for $333.34. Both checks should be payable to the [redacted] The checks should be sent to Chief, TSS/CD, through TSS/Budget Officer no later than 11 July 1955.

3. The two invoices covering this subproject aggregate $20,300.00 and represent the total expenditure to be made under this subproject. It is requested, therefore, that the files on Subproject 43 be closed.

SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

STUDIES OF DISSOCIATED STATES

An examination of current descriptions of dissociative reactions reveals a rather stereotyped concept, differing little from [redacted] original one, and offering a limited definition of the dissociative mechanisms and their role in normal and abnormal psychological functions. The literature concerning clinical entities ordinarily considered to constitute the dissociative reactions is fairly well limited to case-studies of patients with fugues, amnesias, somnambulisms, and multiple personalities.

Unpublished studies by the writer have led him to a greatly expanded concept of dissociation. Dissociative phenomena are found in everyday life. Such manifestations include "highway hypnosis", states of "fascination" in flyers, hypnagogic and phantasy hallucinations, transient anesthesias, and many other examples. These reactions have many features in common with a variety of clinical disorders including "sleep paralysis", trance states, Gilles de la Tourette's disease, latah, "Arctic hysteria", and a number of other disturbances in addition to the well-known dissociative reactions of the text-books.

There is considerable experimental evidence pointing to the significant role played by dissociative mechanisms in the production of the various phenomena of hypnosis. In fact, hypnosis may be considered to be a pure-culture, laboratory-controlled dissociative reaction. Of the entire phenomenology of the various states described above, there is not one single manifestation which cannot be produced experimentally in the hypnotic subject. Thus, through the use of hypnosis as a laboratory device, the dissociative mechanisms can be studied with a high degree of objectivity.

Of increasing interest at the present time are the actions of a variety of new drugs which alter the state of psychological functioning. Some of these agents produce disturbances of perception and integration (mescaline, lysergic acid, etc.). Others produce alterations of autonomic reactivity through inhibition of central (hypothalamic?) functions, so that "emotional responsiveness" is diminished (reserpine, chlorpromazine, etc.). The effects of these agents upon the production, maintenance, and manifestations of dissociated states have never been studied.
