RELEASED 28 OCT 1980

47-2

Project MKULTRA, Subproject 47 PFEIFFER

Date Initiated: 24 March 1955

Date Expires: 1 June 1962

Funds-current year: $30,740

Purpose: Pharmacological and clinical testing in animals and volunteers of chemicals and biochemicals which alter behavior. Provides consultation on special problems of TSD interest.

Status: Study completed on threshold doses of LSD-25, a method for exploring antagonism of this drug by other agents. Work has been initiated to evaluate compound producing amnesia and having an alcohol like effect on behavior will be started. Evaluation of effects of combination of drugs of interest to TSD is 1/4 complete.

Dr. [redacted]

Dear [redacted]

Attached is our 1963-64 report and proposal for continued research support by the [redacted] for the coming year beginning June 1, 1964. We hope that the report and the proposal meet with the Board's approval so that you can advise us positively when you visit us in the near future.

I shall be in [redacted] on Saturday and Sunday, May 2nd and 3rd. I can report in on Friday, May 1st in regard to a possible conference if this is necessary.

Our financial report for the present grant year will be sent shortly after June 1, 1964.

Yours sincerely,

Carl C. Pfeiffer, Ph.D., M.D.
Head, Section on Pharmacology

INSTRUCTIONS

1. If funds, in the form of other than U.S. Dollars were on hand, received, or disbursed during the accounting period, all pertinent data, i.e., rate, method of acquisition, etc., must be shown. If advances have been made to third parties, enter the total of such advances outstanding at the beginning of the accounting period on line 1a.

2. If more space is required to explain receipts, prepare receipt form, number and attach hereto. In every case, completely identify the source of receipts.

3. Attach a voucher for each expenditure and assign a number thereto in numerical sequence. The voucher may be the receipt obtained from the payee. When a receipt is not obtained, prepare a certificate and attach as a voucher. When space on form is not sufficient to list all vouchers, prepare a listing on a separate sheet and enter the total under item 3. If advances to third parties are outstanding at the close of the accounting period, attach an itemized list and enter the total on line 3a.

4. Final credit will not be given for disbursements which are advances to be accounted for. When accounting for advances are obtained, list as expenditures or refund of cash, as appropriate.

5. Total receipts entered on the line "Total to Account For" must agree with the total disbursements entered on the line following "Total Accounted For."

Dr. [redacted]

Dear Dr. [redacted]

I have been informed that your granting committee has again agreed to support our research for a one year period beginning June 1, 1963 and extending until May 31, 1964. On behalf of the New Jersey Mental Health Research & Development Fund, Inc. and my co-workers we wish to thank you for this expressed confidence in our originality and productivity.

Attached you will find a succinct summary of our expenditures on the 1962-63 grant. Exact detailed expenditures are available in the office of the Fund.

Best regards.

Yours sincerely,

Carl C. Pfeiffer, M.D.
Head, Section on Neuropharmacology

DRAFT
12 April 1962

MEMORANDUM FOR: THE RECORD

SUBJECT: MKULTRA Subproject 47

1. The purpose of this subproject 47 is to provide funds to continue a research program being carried out by Carl C. Pfeiffer, MD.

2. The nature of the investigations to be carried out under the direction of Dr. Pfeiffer encompasses pharmacological and clinical testing in animals and human volunteers of chemicals and biochemicals which alter behavior. Certain phases of other problems of interest to TSD will be investigated.

3. Dr. Pfeiffer is located at the New Jersey Neuro-Psychiatric Institute in the Bureau of Research in Neurology and Psychiatry, Princeton, New Jersey.

4. The funds for this project will be transferred using the B [redacted] as a cut-out.

5. The cost of this program for a period of one year beginning 1 June 1962 will not exceed $25,000.00. To this sum must be added $1,000.00 representing a 4% service charge to the B [redacted], making the total amount $26,000.00. Charges should be made against Allotment No. 2125-1390-3902.

6. The New Jersey Mental Health Research and Development Fund Inc., who administer the grant have agreed to provide the B [redacted]

with a summary accounting on an annual basis of all monies received from the [redacted] B They have also agreed to return any unexpended funds to the [redacted] B as soon as possible upon the close of the grant year.

7. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

8. Title to any permanent equipment purchased by funds granted the New Jersey Neuro-Psychiatric Institute shall be retained by the Institute in lieu of high overhead rates.

9. In connection with travel under this project, it is agreed that the Agency will accept the travel documentation and accounting which conform with the practices of the New Jersey Mental Health Research and Development Fund, Inc.

10. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

11. Dr. Pfeiffer has signed the Memorandum of Agreement and holds a TOP SECRET Agency Security Approval.

RESEARCH PROJECT APPLICATION

Grant Period June 1, 1962 through May 31, 1963

PROPOSAL: The testing in animals and humans of chemicals and biochemicals which alter behavior.

PLACE: Section on Pharmacology
Bureau of Research in Neurology and Psychiatry
New Jersey Neuro Psychiatric Institute
Box 1000
Princeton, New Jersey

PRINCIPAL INVESTIGATOR: Carl C. Pfeiffer, Ph.D., M.D.

CO-PRINCIPAL INVESTIGATOR: C [redacted] M.D.

GRANT ADMINISTRATOR: New Jersey Mental Health Research and Development Fund, Inc.
1 Jill Lane, Trenton 8, New Jersey
Henry P. David, Ph.D., Secretary-Treasurer

INTRODUCTION:

Our research efforts have received local attention and approbation during the past year so that we now have excellent rapport with the staffs of both the Institute and the Bordentown Reformatory. We now have 10 volunteers per week from the latter, and we have a Clinical Investigative Unit which will house 80 schizophrenics (present census 45 patients).

Current Status of the Pharmacology Unit

The laboratory is still undergoing minor construction, but material progress has been made in the past year. The section for animal screening and conditioning is complete. The sections for animal neuropharmacology and clinical pharmacology have been constructed and put into operation, andan electronic workshop has been set up. All these units are actively at work in human and animal experiments as outlined below. The facilities

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

of the clinical unit---experimental ward---are nearing completion, and are already in partial use. Still in varying stages of construction are the biochemical pharmacology and medicinal chemistry units.

Personnel: Since the last report, the section has been joined by Drs. [redacted] and [redacted], as planned. It is anticipated that two to three more investigators at the doctoral level will be needed, probably one more clinical pharmacologist, a medicinal chemist, and a biochemical pharmacologist. Two engineers have been employed for design and construction of new equipment and six lab assistants are now fully trained to their various jobs.

Human subjects: Liaison with New Jersey State Reformatory -- Bordentown has been excellent, and a full complement of volunteers from that institution has been freely available. This group may be a better group for this kind of research, since they may be closer to the normal population than were the Atlanta prisoners, the latter being recidivists and older than the Bordentown group. In addition, other human volunteers have been recruited, including female subjects, so that the population of "normal" subjects available is now much more nearly representative of the population at large. In addition, it has been possible already to begin explorations with the psychotic patients from the experimental ward, and some interesting results are already forthcoming (see below).

Equipment: Since the last report, the section has obtained a stereotaxic apparatus, a Grass Model III EEG, and a Sanborn 2000 magnetic tape Data Recorder. In addition, we have constructed two new integrators for quantitative EEG; these are modeled after the Drohocki Integrator; but due to some circuit changes are more linear, and have the advantage of using all USA-made parts, so that maintenance is simplified. Two more integrators are under construction which will allow simultaneous

WARNING
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

integration of four leads, one from each lobe of a hemicranium. Also under construction is a quantitative spectral analyzer for use with the tape recorder in analyzing scalp EEG of humans as well as electrical measurements from implanted electrodes in cortex and deeper structures in brains of animals. Data will be entered on punch cards and processed by a digital computer. Target date for beginning calibration and standardization is June 1, 1962. These new approaches allow determination with great accuracy of effects of various classes of compounds and the interactions of such agents.

A Barber Colman gas chromatograph has been installed and a technician is being trained to operate it. This makes possible correlative studies of changes in brain constituents, changes in behavioral state, and electrophysiological data. This method is far more sensitive than previous techniques, and allows accurate measurements to be made from much smaller brain fractions. A Beckman pH meter and microburette have also been obtained for study of cholinesterase activity, since it appears that psychotomimetic effects frequently if not always involve atropine-like drug action (Pfeiffer, C.C., et al. Neurology, 9: 249-250, 1959)

Recent and current projects: These new techniques, together with the unique availability of human subjects both normal and abnormal, make possible a wide range of investigations on any class of compounds with action on the central nervous system. These can begin at the most basic level and move progressively to a level of sophistication beyond that of almost any other setting. Some idea of the directions currently being taken are indicated in recent and current work. Enclosed are reprints of publications during the past year. The following are also accepted for publication and will appear in the next few months: [redacted],

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

[redacted] and Pfeiffer, C.C. Use of normal subjects for testing drugs (Upjohn Conference), Clin. Pharmacol & Therap.

At the Federation meetings in [redacted] this month, [redacted] will report on, [redacted] and [redacted] and Pfeiffer will report on, Quantitative electroencephalographic analysis of the effects of lysergic acid diethylamide (LSD-25 and d-amphetamine in man. At [redacted] and in Munich Dr. Pfeiffer is giving a paper on, Further Quantitative electroencephalographic studies of the stimulant effects of deanol and d-amphetamine in man. Abstracts of these four papers are enclosed.

In addition to the above, which are ready for formal presentation, the following are under way: A number of tryptamine derivatives are being explored for psychotomimetic and other effects; 4-hydroxy-α-methyl tryptamine, 4-methyl-α-methyl tryptamine, 6-hydroxy-N,N-dimethyltryptamine (The di-methyl analogue of Szara's compound), prolyltryptamine, psylocin, and acetyl tryptamine. Results will be reported as they accrue. The central actions of γ-aminobutyric acid are being indirectly explored by investigating γ-butyrolactone and γ-hydroxybutyric acid. Unlike GABA, these compounds readily cross the blood-brain barrier, and the latter is a potent hypnotic agent and about as active and positive as is chloral hydrate.

[redacted]) has reported an abnormal EEG response to intravenous thiobarbiturate in schizophrenics. Our quantitative method shows no difference as yet in response between normals and schizophrenics. to the intravenous injection of thiopental.

WARNING
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

Research Proposals

In the light of the above, the following are planned for the coming year:

1. Screening of tryptamine compounds in animals and man for hallucinogenic action.
2. Completion of the study of the use of riboflavin as a trace chemical to prove the ingestion of medication in a clinical setting.
3. Further studies on the use of phenoxybenzamine and other adrenergic blocking compounds as antidotes to LSD-25.
4. Further refinement of the use of quantitative brain wave studies to diagnose schizophrenia and to determine the action of hallucinogens.
5. Selection of one or more of a series of stimulant diamines for chronic toxicity studies in animals so that they can be tested in normal human volunteers for possible stimulant action.
6. A search in brain extracts of rabbits treated with Tofranil (imipramine) to determine if any stimulant amine accumulates as a result of degradation of the drug molecule in the body.
7. Determination of the anti-cholinesterase and aminoxidase inhibitory effect of the stimulant diamines.
8. Assay of acetylcholine content of various portions of the brain after prolonged administration of deanol.
9. The assay in man of an intravenous analgesic solution composed of morphine and choline or morphine and carnitine wherein the pharmacologically neutral quaternary compound prevents the engagement of peripheral receptors by the morphine.

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

10. The use of stimulants to prevent the blocking of conditioned behavior.

11. The use of parasympathetic stimulants and methylatropine to interrupt trained behavior.

12. A study of practical drug antidotes to atropine-like compounds.

13. Careful study in normal man of
    A. [redacted] synthesized compounds . . . B
    B. Compounds supplied by the [redacted]
    C. Biochemicals purchased

Note: For elaboration of methods see the 1961-1962 proposal.

PROPOSAL

SUBJECT: The Testing in Animals and Human Volunteers of Chemicals and Biochemicals Which Alter Behavior.

PLACE: The New Jersey Neuro-Psychiatric Institute
The Bureau of Research in Neurology and Psychiatry
Princeton, New Jersey (P.O. Box 1,000)

PRINCIPAL INVESTIGATOR: Carl C. Pfeiffer, Ph.D., M.D.

GRANT ADMINISTRATORS: New Jersey Mental Health Research and Development Fund, Inc.
1 Jill Lane, Trenton 8, New Jersey
Henry P. David, Ph.D., Secretary-Treasurer

It is proposed to conduct screening and range finding tests on volunteers with chemical compounds of known behavioral activity. Studies will be conducted on derivatives of selected biologically active compounds to determine their action on the central nervous system of man.

In addition to these investigations, the following work will be undertaken:

1. Pharmacological testing will be conducted on animals utilizing candidate hallucinogenic chemicals.

2. Studies will be conducted on compounds of relativly simple configuration to assess their ability to inhibit trained behavior in animals utilizing the condition avoidance responses.

3. Studies will be conducted of compounds in normal human volunteers for possible behavioral changes utilizing compounds provided by the sponsor.

4. Quantitative studies of the EEG in animals and man to determine stimulant or depressant effects of candidate materials.

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA Subproject 47

1. The purpose of this subproject 47 is to provide funds to continue a research program being carried out by Carl C. Pfeiffer, MD.

2. The nature of the investigations to be carried out under the direction of Dr. Pfeiffer encompasses pharmacological and clinical testing in animals and human volunteers of chemicals and biochemicals which alter behavior. Certain phases of other problems of interest to TSD will be investigated.

3. Dr. Pfeiffer is located at the New Jersey Neuro-Psychiatric Institute in the Bureau of Research in Neurology and Psychiatry, Princeton, New Jersey.

4. The funds for this project will be transferred using the [redacted] B as a cut-out.

5. The cost of this program for a period of one year beginning 1 June 1961 will not exceed $30,740.00. To this sum must be added $1,229.60 representing a 4% service charge to the [redacted] B making the total amount $31,969.60. Charges should be made against Allotment #2125-1390-3902.

6. The New Jersey Mental Health Research and Development Fund Inc., who administer the grant have agreed to provide the [redacted] B with a summary accounting on an annual basis of all monies received

[redacted] making the total amount $51,477.92. Charges should be made against Allotment 0525-1009-4902.

6. The [redacted] has requested The New Jersey Mental Health Research and Development Fund, Inc., who administer the grant, to submit to them a summary accounting on an annual basis of all monies received from the Fund. Also, it has been requested that any unexpended funds be returned as soon as possible upon the close of the grant year.

7. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

8. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of high overhead rates.

9. In connection with travel under this project, it is agreed that the Agency will accept the travel documentation and accounting which conform with the practices of the University.

10. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

RESEARCH PROJECT APPLICATION

PROPOSAL: The testing in animals and human volunteers of chemicals and biochemicals which alter behavior.

PLACE: The New Jersey Neuro-Psychiatric Institute
The Bureau of Research in Neurology and Psychiatry
Princeton, New Jersey (P. O. Box 1,000)

PRINCIPAL INVESTIGATOR: Carl C. Pfeiffer, Ph.D., M.D.

GRANT ADMINISTRATORS: New Jersey Mental Health Research and Development Fund, Inc.
1 Jill Lane, Trenton 8, New Jersey
Henry P. David, Ph.D., Secretary-Treasurer

INTRODUCTION: The [redacted] has aided the research studies of the principal investigator for more than ten years, during which time many notable advances have been accomplished.

At present the [redacted] supports the search for new hallucinogens (chemically simpler than LSD-25). These are synthesized by [redacted] tested in animals and in vitro systems and then cautiously tested in man. [redacted] is taking a leave of absence next year and will work in 1961 as head of medicinal chemistry in the [redacted]. His synthetic work will continue in 1961, and in 1960-1961 we will test the backlog of compounds already synthesized. The grant to Emory will terminate as of May 31, 1960, which is the close of the present grant year. Other funds are available at Emory to continue the testing of the [redacted] compounds at the Atlanta Federal Penitentiary under the direction of [redacted], M.D. from the period June 1, to December 31, 1960. By this time the human testing will be organized and progressing in New Jersey under the direction of the principal investigator. On July 1, 1961 [redacted] will have completed his last six months of a split internship and will join the research team in the New Jersey location.

RESEARCH PROPOSALS:

A. Pharmacological testing in animals of candidate hallucinogenic chemicals.

B. Study of simple compounds which may inhibit trained behavior such as the conditioned avoidance response.

C. Careful study of compounds in normal human volunteers for possible behavioral changes:

1) [redacted] synthesized compounds
2) Compounds supplied by [redacted]
3) Biochemicals purchased

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

D. Quantitative studies of the EEG in animals and man to determine stimulant or depressant effects.

E. Annual conference on the neuro-biology of psychoses.

Proposals A, B, and C are a continuation of the work now in progress which is familiar to the officers of The [redacted] from our annual and semi-annual reports. Under C the source of human volunteers will be the 100 reformatory inmates (ages 18 to 28) who are stationed on the grounds of the Institute. If 16 volunteers, aged 21 to 28, are not obtained from this group for a weekly session of drug testing, we will have one session of eight subjects at the Institute and one session at the New Jersey State Prison in Trenton. Commissioner Bramberg has given his permission.

Under D we now have perfected and plan to use at the New Jersey Laboratory a quantitative integrator for drug studies in both man and animals.

Adult unanesthetized, trained animals are used. Under anesthesia small gold-plated wood screws are used as dural electrodes. These are lightly engaged in the calvarium and held firmly in place with methacrylate with the permanent lead attached. The recording leads are bi-polar from the left and right frontoparietal lobes of the brain. The animals are in a sound attenuating box and sit quietly for the entire 1 to 2 hour session after a few training periods.

A Grohocki integrator is attached to one lead. This device rectifies the brain waves and by a chopping process, counts the area under the rectified curve. A signal is made at a pre-set degree of sensitivity. The number of signals per unit time is a measure of the degree of electrical activity or "electrogenesis." The number of pulses or signals is directly correlatable with the area under the curve. The constancy of the electrogenesis with elapsed time can be calculated and treated by the usual statistical methods. In this type of analysis, periods as long as five minutes can be used as a baseline or control and thus transient artefacts are eliminated. The action of drugs is usually measured at 1-5 minute intervals after intravenous injection and the drug action is expressed as change in percentage electrogenesis from the control preinjection period. Arousal or stimulant drug effects are recorded as a decrease while sleep (sine waves) produce an increase in electrogenesis.

E. Annual conference on neurobiology of psychoses. Most previous conferences of this type have been poorly planned, and the group has been too large and unwieldy. Money spent on verbatim recording and publishing is wasted, and this process further inhibits the participants.

The participants will be limited to 12 or 15. The record will be in the form of the individual's own notes and the notes of a scientifically trained secretary. The summarizing secretary will change with each three-hour session. In a two-day conference we would have five sessions of three hours each.

The conference would be held in [redacted] just before or after the [redacted] Only scientists with a biological approach to mental disease would be invited. The various basic disciplines would be represented. Some of the participants might be

WARNING NOTICE

SOURCES AND METHODS INVOLVED

Prior to the meeting a questionnaire on possible biological factors in mental disease would be circulated to the participants, and their response to these possible etiological factors listed would determine the agenda and the priority of the factors discussed.

Possible biological factors which will be included in the questionnaire are for:

A. The Schizophrenias (assuming a heterogeneous clinical entity)
1) Defective keto-acid utilization
2) Defective carbohydrate utilization
3) Decreased level of blood glutathione
4) Therapeutic effect of intravenous glutathione
5) Increased ascorbic acid requirement
6) Increased ceruloplasmin in acute schizophrenia
7) Therapeutic effect of ceruloplasmin
8) The effect and role of Taraxein
9) Increased adrenal cortical and medullary activity
10) Increased urinary catechol amine excretion
11) Increased urinary indole excretion
12) Epinephrine metabolism
13) Serotonin
14) Thyroid function
15) Estrogen-androgen function (more common in female?)
16) Liver function tests
17) Co-enzyme activity (hippuric acid synthesis) Co-enzyme A
18) Effect of growth hormone
    a) Occurs when somatic growth stops
    b) Post-partum psychosis
    c) ACTH psychoses
19) Childhood autism and the adult schizophrenics
20) Pineal gland extracts
21) The schizophrenias in the blind
22) Sensory deprivations and psychosis
23) EEG abnormalities
    a) Heath's septal spikes
    b) 14 and 6 disorder
    c) Goldman's fast activity after pentothal
24) Biology of electroconvulsive therapy (change in cholesterol esters)
25) Biology of insulin coma therapy
26) Specific effects of nicotinic acid therapy
27) Specific effects of phenothiazines
28) Specific effects of reserpine
29) Specific effects of deanol
30) Porphyrin metabolism
31) Thioctic acid
32) Funkenstein tests
33) Response to histamine and allergies
34) Overdosage of amine oxidase inhibitors
35) Influence of tuberculosis, influenza, etc.
36) Somatotypes

WARNING NOTICE

47-34

B. Depressive psychoses
1) Amine oxidase inhibition
2) Action of electroconvulsive therapy or insulin
3) Deanol therapy
4) Blood butane-2, 3-diol levels
5) Somatotypes

C. Manic psychoses
1) Effect of lithium
2) Metabolism of uric acid
3) Hyperthyroid mania
4) Neuraminic acid
5) Catechol amine excretion
6) Indole excretion
7) Bloodacetoin levels
8) Effect of phenothiazines
9) Somatotypes

OFFICE OF THE DIRECTOR

A [redacted]
B [redacted]

A Dear [redacted]

Attached you will find our research proposal for the year 1960-1961. We hope your reviewing board will look favorably on this application.

If the grant can be activated as of June 1, 1960, we shall be able to order certain items of equipment and thus decrease the delay which may result in changing our laboratories. I shall begin work in New Jersey as of July 1, 1960. If you or the officers of the [redacted] B have any questions, I shall be glad to appear before your group to explain or justify any of the budgetary items or expand on the details of the proposed research.

We are proceeding with the testing of the compounds which A has submitted.

Yours sincerely,

Carl C. Pfeiffer, M.D.

A Dear [redacted]

Attached you will find a copy of our budget report prepared on November 18, 1959 with encumbrances projected for the grant until June 1, 1960. From the report you will note that that the grant from the [redacted] B is being spent according to schedule and will be used up as of June 1, 1960.

Payments are complete as of the present date, but a quarterly payment will be due Emory University on December 1, 1959.

Enclosed you will find [redacted] C report for the first six months. Our report of drug testing at the Atlanta Penitentiary will be sent to you early in December.

Yours sincerely,

Carl C. Pfeiffer, M.D.

DRAFT A
25 June 1959

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 47

1. The purpose of this subproject is to provide funds for the continuation of the program being carried out at Emory University under Carl C. Pfeiffer, M.D. The scope of this work basically covers the development and testing of new chemical compounds which are hallucinogenic or otherwise affect the central nervous system of humans. Certain phases of other problems of interest to TSS/CD will be investigated.

2. The nature of the investigations to be carried out under the direction of Dr. Pfeiffer encompasses the synthesis, pharmacology and pertinent biochemistry of potential hallucinogenic chemical compounds. Testing and evaluation will be conducted in normal human volunteers.

3. The funds for this project will be transferred using the [redacted] as a cut-out.

4. The cost of this program for a period of one year beginning 1 June 1959 will not exceed $4[illegible],378.00. To this sum must be added

Downgraded to: CONFIDENTIAL

$1,935.12 representing a 4% service charge to the [redacted] B [redacted] making the total amount $50,313.12. Charges should be made against Allotment 9-2502-75-902.

B 5. [redacted] has requested Emory University to submit to them a summary accounting on an annual basis of all monies received from the [redacted]. Also, it has been requested that any unexpended funds be returned as soon as possible upon the close of the grant year.

6. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

7. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of high overhead rates.

8. In connection with travel under this project, it is agreed that the Agency will accept the travel documentation and accounting which conform with the practices of the University.

9. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

DRAFT
19 June 1958

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 47

1. The purpose of this subproject is to provide funds for the continuation of the program being carried out at Emory University under Dr. Carl C. Pfeiffer. The scope of this work is outlined in the attached proposal submitted to Drs. Pfeiffer and [redacted] and basically covers the development and testing of new hallucinogenic compounds as well as certain phases of other problems of interest to TSS/CD.

2. It should be noted that as in past years, a considerable portion of the total cost of the indicated program will be borne by agencies other than TSS/CD. These include the U.S. Public Health Service, Emory University, [redacted] and others.

3. The funds for this project will be transferred using the [redacted], as cutout in the usual manner.

4. The cost of this program for a period of one year, beginning 1 June 1958 will not exceed $48,202.00, to which must be added the four percent (4%) fee to the [redacted], making the total amount $50,130.08. Charges should be made against Allotment 8-2502-10-001.

5. The [redacted] has requested Emory University to

47-56

submit to them a summary accounting on an annual basis of all monies received from the Fund. Also, it has been requested that any unexpended funds be returned as soon as possible upon the close of the grant year.

6. The requirement for a six months' informal accounting on the part of the principal investigator is waived.

7. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of higher overhead rates.

8. In connection with travel under this project, it is agreed that the Agency will accept the travel documentation and accounting which conform with the practices of the University.

9. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

10. Dr. Pfeiffer has signed the Memorandum of Agreement and holds a TOP SECRET Agency Security Approval.

PROPOSED RESEARCH FOR 1958-59 C 47-54

1. Continued testing program in animals and man of the potential hallucinatory chemicals which have been synthesized by [redacted] or which become available from commercial laboratories. [redacted] now has 30 chemicals awaiting testing in man. C C
2. 2-dimethylaminoethanol in preliminary trials modifies the LSD-25 model psychosis in that the onset of symptoms is delayed but in the individual subjects the visual hallucinations are more frequent. A double blind test of rigid design will be set up to quantify this effect.
3. The possible occurrence of 2-dimethylaminoethanol in natural foods will be determined by steam distillation and paper chromatography.
4. Tests will be made on Carnitine and its tertiary amine derivative to ascertain its possible role as a neurohumor in the central nervous system.
5. The D and L forms of lactylcholine have been synthesized and will be extensively tested in animals to ascertain the possible similarity to acetylcholine. Other natural occurring alpha hydroxy acids will be esterified to choline to determine their potency.
6. Continued testing in man and animals of those compounds which may be submitted by the [redacted] B
7. Determination of the effect of candidate hallucinogens on d-aminoxidase activity *in vitro*.

MEMORANDUM FOR: CHIEF, FINANCE DIVISION

VIA : [redacted] TSS/Budget Officer

SUBJECT : MKULTRA, Subproject 47, Invoice #6
Allotment 7-2502-10-001

1. Invoice #6 covering the above subproject is attached. Other invoices will follow. It is requested that payment be made as follows:

Cashier's check in the amount of $16,140.33, drawn on a [redacted] bank.

Cashier's check in the amount of $645.61, drawn on a [redacted] bank.

Each check should be made payable to the [redacted]

2. The checks should be forwarded to Chief, TSS/Chemical Division, through TSS/Budget Officer, no later than Tuesday, 20 August 1957.

[redacted]

MEMORANDUM FOR: COMPTROLLER

ATTENTION: Finance Division

SUBJECT: MKULTRA, Subproject 47, Additional Authorization No. 5

Under the authority granted in the memorandum dated 13 April 1953, from the DCI to the DD/A and the extension of this authority in subsequent memoranda, Subproject 47 was previously approved. Under the same authority an additional sum of $50,357.84 has been authorized to cover the subproject's expenses (thereby bringing to a total of $50,357.84 funds obligated during FY 57), to be charged to Allotment 7-2502-10-001.

47-61

MEMORANDUM FOR: THE RECORD

SUBJECT: MKULTRA, Subproject 47

1. The purpose of this subproject is to provide funds for the continuation of the program being carried out at Emory University under Dr. Carl C. Pfeiffer. The scope of this work is outlined in the attached proposal submitted by Drs. Pfeiffer and [redacted] and basically covers the development and testing of new hallucinogenic compounds as well as certain phases of other problems of interest to TSS/CD.

2. It should be noted that as in past years, a considerable portion of the total cost of the indicated program will be borne by agencies other than TSS/CD. These include the U.S. Public Health Service, Emory University, the [redacted] and others.

3. The funds for this project will be transferred using the [redacted], as cutout in the usual manner.

4. The cost of this program for a period of one year, beginning 1 June 1957 will not exceed $48,421.00 to which must be added the four percent (4%) fee to the [redacted], making the total amount $50,357.84. $50,130.08

$5,202.00

5. The [redacted] has requested Emory University to submit to them a summary accounting on an annual basis of all monies received from the Fund. Also, it has been requested that any unexpended funds be returned as soon as possible upon the close of the grant year.

6. The requirement for a six months informal accounting on the part of the principal investigator is waived.

7. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of higher overhead rates.

8. In connection with travel under this project, it is agreed

[redacted]

47-67

that the Agency will accept the travel documentation and accounting which conform with the practices of the University.

9. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

10. Dr. Pfeiffer has signed the Memorandum of Agreement and holds a Top Secret Agency Security Approval.

PROPOSED RESEARCH PROJECTS FOR 1957-58

47 - 67

A. Human volunteers - Atlanta Federal Penitentiary

1. Potentiation of LSD-25 psychosis with cortisone
2. Trials of new hallucinogenic agents
3. Dibenamine and Dibenzyline as antagonists to LSD-25
4. Search for new antagonists to LSD-25
5. Trials of the so-called inactive isomer l-LSD-25 as a hallucinogen
6. Trials of other CNS active drugs

B. Pharmacological and biochemical studies

1. In vitro studies of candidate hallucinogens on enzyme systems
   a. Cholinesterases, b. Mono- and diamine oxidases, c. Glucose metabolism of S. cerevisiae, d. d-amino acid oxidase
2. Effect of candidate compounds on rabbit body temperature
3. Effect on activity of mice
4. Gaddum rat uterus - inhibition of 5-HT
5. Pharmacodynamic studies in the anesthetized dog
6. Chronic toxicity and safety studies on promising compounds before trial in man
7. Pharmacodynamic studies on optically active esters of choline

C. Chemical synthetic program

1. Synthesis of substituted piperidine carboxamides
2. Synthesis of aryl alkyl amine derivatives
3. Synthesis of indolyl alkyl amine
4. Synthesis of optically active esters of choline
5. Synthesis of a few additional salts of 2-dimethylaminoethanol

D. Clinical studies in schizophrenia

1. Continued trials of 2-dimethylaminoethanol in patients
2. Trial of naturally occurring sulph hydryl compounds in schizophrenia

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

The experimental subjects are a group of sixteen volunteers, inmates of the U. S. Federal Penitentiary at Atlanta, Georgia. Healthy and emotionally stable (as determined by psychometric tests) individuals are chosen. Their mean age at present is 34 years, their mean weight is 160 pounds. Their I.Qs. range from 90 to 123. The doses of drugs are administered at random at weekly intervals. All subjects have experienced the effects of central nervous system stimulants and depressants. They are able to identify and to communicate the subjective responses to these drugs and have proven that their responses are somewhat reproducible.

Tests are carried out in a hospital room. The subjects are encouraged to stay in bed during the trials. Drugs are administered orally, two hours after a light morning breakfast. Testing is usually done single or double blind. The drugs are handed to each subject in a small labeled bottle. The label bears only the name of the subject. The subjects place the tablets or capsules in their mouth under supervision of the physician and wash them down with a cup of quinine flavored water. The evaluation of the drug effects is based on three types of responses.

A. Observations are made by the attending doctor during a three-hour test period following administration of the drug. These include measurements of blood pressure, pulse rate, body temperature and hand steadiness at 60 or 90 minutes intervals. It also includes observations on the neurological and mental status of the subjects, such as alertness, sleep and arousal from sleep.

B. A personal interview is made at the end of the three-hour period. In this interview the subject is encouraged to tell his feelings under the influence of the drug and compares them with similar or dissimilar effects which he may have experienced with the other drugs on previous trials.

C. Twenty-four hour statement. The subjects prepare a written statement of the effects experienced in the twenty-four hour period after the administration of the drug. The criteria for the effects were established by the subjects themselves. Subjects were told either after the interview or after they had prepared their written statement which drug and dose had been administered. This increases their degree of drug sophistication and allows them to evaluate new drug effects.

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

47-67

A careful study of SAR of acetylcholine Ach and atropine-like compounds indicates that the naturally occurring Ach-like compound should have an asymmetric carbon atom in the acid moiety. The evidence for the existence of Ach in body fluids is tenuous since identification has been made only by Reineche precipitation which method only tests for quaternary nitrogen containing compounds. A few of the optically active acids which might be esterified with choline are lactic, pantothenic and ascorbic acids. These analogues of Ach are therefore in process of being synthesized to determine their pharmacodynamic effect.

SOURCES AND METHODS INVOLVED

47-68

COMPOUNDS HAVING A POTENTIAL EFFECT UPON THE CENTRAL NERVOUS SYSTEM WITH EMPHASIS UPON MOIETIES ORIGINATING HALLUCINATORY EFFECTS

by

[redacted]

OUTLINE of Fourth Report (January 1, - May 30, 1957)

I. The work was continued in accordance with the outline of the Third Report, submitted in December 1956.

A. Substituted Piperidinecarboxamides:
(1) compounds synthesized and postulated structure confirmed:
a. 1-methyl-3-(N-methylcarboxamido)-1,2,5,6-tetrahydropyridine hydrochloride (G-36)
b. 1-methyl-3-(N-ethylcarboxamido)-1,2,5,6-tetrahydropyridine hydrochloride (G-37)
c. 1,1-bis/3-(N,N-diethylcarboxamido)piperidino/methane (G-109)
(2) work in progress:
a. synthesis of 1-methyl-4-phenyl-4-(N,N-diethylcarboxamido)piperidine hydrochloride (G-38)

B. Arylalkylamine Derivatives:
(1) compounds synthesized and postulated structure confirmed:
a. N,N-diethyl-β-bromopropionamide (GI-103, X), intermediate
b. N-phenethyl-N-methyl-β-alanine diethylamide hydrochloride (GI-104, XI)

C. Indolylalkylamine Derivatives:
(1) compounds synthesized and postulated structure confirmed:
a. 4-(N,N-diethylamino)butyl 3,4,5-trimethoxybenzoate (GI-503,XXIX), aliphatic analogue of reserpine
b. 4-(N,N-diethylamino)butyronitrile (GI-551, XXXIII), intermediate
c. 4-(N,N-diethylamino)butylamine (GI-552, XXXIV), intermediate
(2) work in progress:
a. synthesis of N-/4-(N,N-diethylamino)butyl/-3,4,5-trimethoxybenzamide (GI-553, XXX), aliphatic analogue of reserpine
b. synthesis of N-formyltryptamine (GI-201, XIV), intermediate

II. In addition to the work already in progress, new projects have been undertaken.

A. Utilizing the products of our synthetic program, we are planning to study the effect of gradual changes in molecular constitution upon enzymes as-

WARNING NOTICE
SENSITIVE INTELLIGENCE SOURCES AND METHODS INVOLVED

4746

sociated with brain metabolism and, possibly, upon other pertinent biochemical systems, in vitro. Based on the information available at the present time, the systems listed below are being considered for the first series of evaluative experiments. While we realize that their causal connection with hallucinatory disturbances has not been conclusively established, we feel that they constitute a suitable starting point. In each instance, known psychotomimetic agents will be evaluated along with our compounds.

(1) cholinesterases:

a. acetylcholinesterase (substrate: acetyl-β-methylcholine; compounds studied: pyridine- and piperidinecarboxylic acid, arylalkylamine and indolylalkylamine derivatives; effects studied: inhibition and/or potentiation; method: Warburg manometric technique)

b. pseudocholinesterase (substrate: butyrylcholine and/or benzoylcholine; compounds studied: pyridine- and piperidinecarboxylic acid, arylalkylamine and indolylalkylamine derivatives; effects studied: inhibition and/or potentiation; method: Warburg manometric technique)

LSD was found to be a powerful inhibitor of pseudocholinesterase in human serum and brain. Pseudocholinesterase activity of rat, guinea-pig, rabbit, chicken and monkey brain is much less sensitive to inhibition by LSD than is the corresponding enzyme in human brain. Pseudocholinesterase was inhibited more powerfully by LSD than by other ergot alkaloids. (R. H. S. Thompson, A. Tickner and G. R. Webster, Brit. J. Pharmacol., 10: 61, 1955.) LSD was found to inhibit (50%) pseudocholinesterase activity at a 1×10^{-6} M. concentration and was found to augment (50%) the activity of the enzyme at 6×10^{-9} M. concentration. Similar observations were reported for serotonin (5-hydroxytryptamine). (G. H. Fried and W. Antopol, Fed. Proc., 16: 357, 1957.) Meperidine (1-methyl-4-phenyl-4-carbethoxypiperidine) and other narcotic analgesics capable of producing hallucinations were reported to potentiate (42-139%) the hydrolysis of benzoylcholine by pseudocholinesterase at concentrations ranging from 10^{-3} to 10^{-4} M. (E. G. Erdos and S. P. Shanor, Fed. Proc., 16: 297, 1957.) Tryptamine and benzylamine (phenylmethylamine) were found to activate (43-93%) the hydrolytic action of pseudocholinesterase upon benzoylcholine. (E. G. Erdos, F. F. Foldes, N. Baart and S. P. Shanor, Fed. Proc., 16: 294, 1957.)

(2) amine oxidases:

a. monoamine oxidase and b. diamine oxidase (substrate: arylalkylamine and indolylalkylamine derivatives; compounds studied: known and potential inhibitors, our pyridine- and piperidinecarboxylic acid derivatives; effects studied: inhibition and/or potentiation, evaluation of relationships in the substrate affinities of the two enzymes; method: Warburg manometric technique)

Monoamine oxidase is considered to be a major catalyst of serotonin metabolism in tissues. Iproniazid is reported to inhibit monoamine oxidase in the brain, but unable to penetrate to the site of monoamine oxidase in intact cells of other tissues. (H. Weissbach, D. F. Bogdanski, B. Redfield and S. Udenfriend, Fed. Proc., 16: 345, 1957.) Relationships between monoamine oxidase and diamine oxidase were reported. There is indication that the affinities of the two enzymes are overlaping; however, some of their characteristics have been found to retain their specificities. Mescaline (3,4,5-trimethoxyphenethylamine) and tyramine were reported to be among the substrates of diamine oxidase, while some β-aminoethylimidazoles were found to be substrates for monoamine oxidase. (E. A. Zeller, J. Barsky, L. A. Blenkema, and J. C. Lazarus, Fed. Proc., 16: 276, 1957.)

(3) Saccharomyces cerevisiae:

S. cerevisiae (substrate: glucose; compounds studied: pyridine- and pipe-

WARNING NOTICE
SENSITIVE INTELLIGENCE SOURCES AND METHODS INVOLVED

47-68

ridinecarboxylic acid, arylalkylamine and indolylalkylamine derivatives; effects studied: inhibition and/or potentiation of carbohydrate metabolism as determined by manometric estimation of oxygen consumption; method: Warburg manometric technique; an exploratory study of the effect of our compounds upon the glycogen metabolism of S. cerivisiae is also contemplated)
LSD and mescaline (3,4,5-trimethoxyphenethylamine) were reported to inhibit respiration of S. cerevisiae (substrate: glucose) at 10^{-3} to 10^{-4} and 10^{-2} M. concentrations, respectively. (H. P. Rieder, Confinia Neurologica, 14: 65, 1954.)- Clinical investigations suggested that LSD induced hallucinations may be due to interference with normal carbohydrate metabolism. (W. Mayer-Gross, W. McAdam and J. W. Walker, Nervenarzt, 23: 30, 1952.; cf. Nature, 168: 827, 1951 and J. Mental Sci., 99: 804, 1953.)-

B. In connection with the investigation designed to develop means for an improved supply of muscarinic agents to brain tissue, Dr. Pfeiffer suggested the preparation of the following compounds:
(1) the dl, l and d isomers of lactylcholine
(2) the l and d isomers of pantothenylcholine
(3) the choline ethers of d- and l-ascorbic acid
The dl-lactylcholine iodide has been already prepared, the postulated structure was confirmed, and a synthetic procedure was developed which may be of value in industrial processing, should the compound or any of its isomers possess chemotherapeutic potentialities.

C. In connection with the Doaner Project, Dr. Pfeiffer suggested:
(1) exploratory work to determine whether 2-dimethylaminoethanol is present in detectable quantities in food materials,
(2) the preparation of salts of 2-dimethylaminoethanol with the following acids:
a. d-pantothenic acid
b. d-pantoic acid
c. p-acetylaminobenzoic acid
d. dl-mandelic acid
The d-pantothenic acid and d-pantoic acid salts have been prepared. Additional quantities of already known salts have also been prepared.

Emory University, May 17, 1957.

DRAFT

7 June 1956

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 47

1. The purpose of this project is to provide funds to continue the research program conducted by Dr. Carl Pfeiffer at Emory University. This program is designed to exploit all the knowledge and facilities available to its director in providing answers to specific questions of direct interest to the Agency. In addition, those areas of basic knowledge required to provide these practical answers will be developed. It should be noted that although the attached proposal describes the facilities which will be used in the study, the program itself was deliberately described in general overt terms in order to comply with its unclassified status.

2. In view of the above it is desired to describe more specifically the various phases of the general program here.

(a) A relatively small part of the program will be in the fundamental field of the relationship of structure to activity. This basic study will be of an overt nature and will serve the purpose of maintaining cover for the [redacted] support of the program.

47 - 77

(b) A second phase will be represented by an extensive effort on behalf of Dr. Pfeiffer to find a solution to the requirement for an anti-interrogation drug. This requirement was laid on TSS/Chemical Division by another Agency component.

(c) A third phase of the program will provide screening and evaluation of compounds submitted by TSS/CD, including the phases involving tests in human volunteers.

3. The funds for this project will be transferred using the [redacted], as cutout in the usual manner. B

4. Costs for this program for a period of one year beginning 1 June 1956 are estimated to be $47,403.00, to B which must be added a four percent (4%) fee to the [redacted], making the total amount $49,299.12.

5. The [redacted] B has requested Emory University to submit to them a summary accounting on an annual basis of all monies received from the Fund. Also, it has been requested that any unexpended funds be returned as soon as possible upon the close of the grant year.

6. The requirement for a six months informal accounting on the part of the principal investigator is waived.

7. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of higher overhead rates.

8. In connection with travel under this project, it is agreed that the Agency will accept the travel documentation and accounting which conform with the practices of the University.

9. It is agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

PROPOSAL

It is proposed to continue the work at Emory University which has been conducted during the last two years by Dr. Carl C. Pfeiffer under the nominal title, "The Pharmacological Screening and Evaluation of Chemical Compounds Having Central Nervous System Activities."

The program at Emory is necessarily divided into several parts, some of which are supported by grants other than that of the [redacted] but which are operated as integral parts of the program. Other agencies who contribute are Emory University and the U. S. Public Health Service.

Facilities which contribute a major portion of their capacity toward the program are as follows:

1. [redacted]traction Laboratories at Emory University under the direction of [redacted]

2. Neuropharmacology and Electrophysiology Laboratories at Emory University under the direction of [redacted]

Downgraded to: CONFIDENTIAL
by authority of: 187475

E2 IMPDET; CL

Downgraded to: CONFIDENTIAL
by authority of: 187475
date: June 1977
E2 IMPDET; CL BY 187475

47-77

3. General Animal Pharmacology Laboratories at Emory University under the direction of Professor Carl C. Pfeiffer.

4. Behavioral Psychology Laboratories (Animal) under the direction of the Department of Psychology at Emory University with auxilliary animal testing laboratories under the direction of [redacted] in the Department of Pharmacology.

5. Facilities for preliminary human pharmacological testing at [redacted]

6. Facilities for testing in normal human volunteers at Atlanta Federal Penitentiary directed by Professor Pfeiffer.

The general program to be continued by these various facilities is the discovery and complete screening and testing of a number of materials capable of producing alterations in the human central nervous system which are reflected as alterations

in human behavior. Such fundamental research on mechanisms of action and structure-activity relationships as is necessary to the consistent production of such materials will be undertaken as required in addition to the practical evaluation of them. Compounds from many sources will be evaluated in addition to those of special interest to the [redacted] B

Several particular projects for the coming year have been discussed with the [redacted] B representative and plans are being made to carry these out in addition to any others which may arise during the year. These particular projects are as follows:

1. To evaluate the effects of large doses of LSD-25 in normal human volunteers.
2. To evaluate the threshold dose levels in humans of a particular natural product to be supplied by the [redacted] B This evaluation presents difficulties of a nature which makes it a unique problem.
3. To evaluate in human beings a substance which we now believe has the ability to counteract the inebriating effects of ethyl alcohol.

MEMORANDUM OF AGREEMENT

The purpose of this memorandum of agreement is to set forth the mutual administrative responsibilities of the principal research investigator and the sponsor. Therefore, it is mutually agreed that,

A. The principal investigator shall submit to the sponsor, at six month intervals, an informal statement of expenditures of monies advanced for research activities. It is requested that the statement be submitted in essentially the following form:

Personal Compensation
(Salaries, Subject Fees)
Equipment
Supplies and Services
Contingencies
Overhead

B. It is understood that any travel expenses incurred in the furtherance of the research program will be accounted to the University in a manner consistent with its established practices and policies.

C. The principal investigator shall submit to the sponsor semi-annual reports on the technical progress of the research covered by these funds.

D. Title to any permanent equipment shall be retained by the University in lieu of higher overhead rates.

Dr. [redacted] C
Director
[redacted] B

Dear [redacted] C B

As one of the favored recipients of grants from the [redacted], I wish to thank you for the support of our basic chemical and pharmacological research program for the past four years. It is our hope that our close relationship with the [redacted] will continue since we ourselves are continuing to expand our interests in this field.

Since my last letter I have obtained an accurate quotation on the Model DK-2 Beckman recording spectrophotometer and the items can be listed as follows:

1 Model DK-2 Beckman recording spectrophotometer	$7,475.00
1 "Time-drive" attachment for above	290.00
3% Georgia sales tax	233.00
TOTAL	$7,998.00

This equipment will be of extreme value to us in our present research and is, I believe, a basic instrument for our present research program and will continue to be utilized in the interest of the [redacted] B for many years to come in our research at Emory University.

Yours sincerely,

Carl C. Pfeiffer, M.D.
Professor and Chairman

47-86

5 October 1955

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA Subproject 47, Additional Authorization

1. Dr. Carl Pfeiffer, Professor of Pharmacology, Emory University Medical School, is currently engaged in the study of drugs affecting the central nervous system. In addition, Dr. Pfeiffer also conducts a screening and evaluation program of materials of pharmacological interest to TSS/CD.

2. As a result of exhaustive conversations between TSS/CD and Dr. Pfeiffer, it was felt that the addition of a Beckman DK-2 Ratio Recording Spectrophotometer to his present facilities would expedite the program and contribute materially to the obtainment of much needed data. For a more detailed application of the instrument, see the attached proposal.

3. The estimated cost of this instrument is $8,000.00. The [redacted], service charge of four percent ($320.00) must be added, making the total figure $8,320.00. Charges should be made against Allotment [redacted]

4. In accordance with the Memorandum of Understanding with Dr. Pfeiffer, the University shall retain title to any permanent equipment. This is felt to be fully justified in view of the importance of the program in which Dr. Pfeiffer is engaged on our behalf. Purchase of this instrument will materially increase the production of the program. Additionally, in view of the manner in which these grants-in-aid are handled, security considerations make it undesirable to attempt to provide the equipment on a loan basis or otherwise retain title to it.

5. The [redacted] has made arrangements for the return of unexpended monies to the Agency upon completion of the program. This agreement is maintained in the records of the Fund.

Downgraded to: CONFIDENTIAL

E2 IMPDET: CL BY 187475

6. The present program with Dr. Pfeiffer extends to 30 June 1956. It is anticipated that TSS/CD will desire to continue utilizing the services of Dr. Pfeiffer for an indefinite period beyond that date, by giving further grants for research activities. Prior to actually turning the funds for the spectrophotometer over to Dr. Pfeiffer, TSS/CD (through the [redacted] will obtain a statement from him to the effect that he is favorable to a continuing relationship with the [redacted]

7. Dr. Pfeiffer holds a TOP SECRET approval for work under Project MKULTRA.

[redacted]

[redacted]

Dear [redacted]

I was advised by your representative, [redacted] that one of our special research needs might be considered by the [redacted] Specifically we need for research purposes in mental disease a Beckman DK-2 ratio recording Spectrophotometer. This would be used for the following purposes:

1) Routine assay for purity in those compounds synthesized by [redacted] or those compounds which he isolates from natural sources.

2) Use for monitoring rapid chemical reactions in biological systems.

a) The combination of convulsant acridone with deoxyribonucleic acid or ribonucleic acid.

b) The combination of pyridoxal phosphate with thiocarbohydrazide.

c) The modification of epinephrine by schizophrenic serum and cerebrospinal fluid. Heath reports a marked difference in light absorption with time that is characteristic of schizophrenic serum.

The cost of this basic unit is $7,475.00, but with the wavelength hold attachment and sales tax the total cost would be about $8,000.00.

Yours sincerely,

Carl C. Pfeiffer, M.D.
Professor and Chairman

MEMORANDUM FOR: THE RECORD

SUBJECT: Addendum to Subproject 47

1. The purpose of this addendum is to set forth the mutual administrative responsibilities of the contractor and sponsor.

2. The above subproject represent the research program of Dr. Carl Pfeiffer located at Emory University covering the period of 1 July 1955 through 30 June 1956.

3. The principal investigator shall submit to the sponsor, at six month intervals, an informal statement of expenditures of monies advanced for research activities. It is requested that the statement be submitted in essentially the following form:

a. Personal Compensation (Salaries, Subject Fees),
b. Equipment,
c. Supplies and Services,
d. Travel,
e. Overhead,
f. Contingencies.

Also, the [redacted] has requested Emory University to submit to them a summary accounting of monies received from the Fund. They also requested the return of any unexpended funds received under a grant from the Fund.

4. Title to any permanent equipment purchased by funds granted the University shall be retained by the University in lieu of higher overhead rates.

5. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the University shall conform with the accepted practices of that Institution.

6. It was agreed that technical reports reflecting the progress of the research program shall be submitted at mutually acceptable intervals.

SCOPE OF PROJECT

You will find enclosed a proposed budget for 1955-56 beginning with July 1, 1955. With this proposed budget, we would be able to do all of the pharmacological testing required by the [redacted] including the testing of new compounds made at this University and other compounds which would be submitted by you, [redacted] and [redacted] This would also include screening compounds of medicinal origin supplied by the Australian scientists and by [redacted]. When the pharmacological technician was not busy we would plan to have her continue a careful study in mice and rats of CNS stimulants which might antidote the acute effects of alcohol.

The travel budget may appear rather large but this is necessary in order to continue our testing program in man at the [redacted]

DRAFT [redacted] 47-98
23 March 1955

MEMORANDUM FOR: THE RECORD

SUBJECT : Project MKULTRA, Subproject 47

1. The purpose of this project is to provide funds for the study of drugs affecting the central nervous system, and to screen and evaluate pharmacologically any other compounds which may be of interest to TSS/Chemical Division.

2. The attached proposal indicates the extent of the investigations that will be carried out in these facilities available at Emory University and provides for close cooperation with the work at [redacted] B

3. The funds for this project will be transferred using the B [redacted], as cut-out in the usual manner.

4. The cost of this program for a period of one year beginning 1 July 1955 will be $43,803.10 to which must be added four percent (4%) fee to the [redacted] making the total amount $45,555.22. At the present time $15,000.00 is being committed, $14,400 for the project and $600.00 fee to the [redacted] B The balance of the total will be committed at a later date.

5. Both [redacted] C and Dr. Pfeiffer are cleared TOP SECRET by the Agency and are aware of the sensitive nature of this work.

CIA FILE # 47-99

EMORY UNIVERSITY
EMORY UNIVERSITY, GEORGIA

DIVISION OF BASIC SCIENCES
IN THE HEALTH SERVICES
Department of Pharmacology

March 4, 1955

Dr. Sidney Gottlieb
Scientific Representative
[redacted] B

Dear Dr. Gottlieb:

Enclosed you will find two copies of our report on the [redacted] C compound which includes a request for more of Compound No. ERB 4-99II. We are sending this report at this time so that you can have more of this compound made to continue our pharmacological testing.

In addition, you will find enclosed a proposed budget for 1955-56 beginning with July 1, 1955. With this proposed budget, we would be able to do all of the pharmacological testing required by the [redacted] B, including the testing of new compounds made at this University and other compounds which would be submitted by you [redacted] C and [redacted]. This would also include screening compounds of medicinal origin supplied by the [redacted] C scientists and by [redacted] C. When the pharmacological technician was not busy we would plan to have her continue a careful study in mice and rats of CNS stimulants which might antidote the acute effects of alcohol.

You will note that we also have attached a bare minimum budget which would provide for the expenditures now made by the department for the [redacted] B. In order to get the laboratory work started we have had [redacted] C engaged full-time at departmental expense on [redacted] problems as well as a secretary part-time and an animal man half-time. If the full expanded program is not required by the [redacted] B, then we would drop back to the bare minimum budget as outlined on the attached sheet.

During [redacted] A visit we outlined our progress in several portions of our research program and if a formal report is required immediately by the [redacted] B this can be provided. We will of course have a detailed report at the end of June covering progress during the first year of support of this research program.

The travel budget may appear rather large but this is necessary in order to continue our testing program in man at the [redacted] B.

Yours sincerely,

Carl C. Pfeiffer

Carl C. Pfeiffer, M.D.
