MEMORANDUM FOR: CHIEF, FINANCE DIVISION

VIA : TSD/Budget Officer

SUBJECT : MKULTRA, Subproject 66, Invoice #6
Allotment 1525-1009-1952

1. Invoice No. 6 covering the above subproject is attached. It is requested that payment be made as follows:

Cashier's check in the amount of $2,600.87, payable to the [redacted] drawn on a [redacted] bank.

2. The check should be forwarded to Chief, TSD/Research Branch, through TSD/Budget Officer, no later than Wednesday, 24 August 1960.

3. This is a final invoice. However, since it is anticipated that additional funds will be obligated for this project, the files should not be closed.

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKULTRA, Subproject 66

1. The purpose of Project MKULTRA, Subproject No. 66 is to support the research program on the determinants of alcohol intoxication undertaken at [redacted] and associates. The program will continue for one year starting 16 September 1958 through 16 September 1959.

2. The scope of the project will include:

(a) Continuation of double-blind experimental studies of drug effects, employing various "alcohol placebos" and chemical extenders developed by TSS/CD;

(b) Comparing alcohol effects on a small sample of subjects on whom repeated observations can be made during periods of naturally induced stress, mood depression and fatigue;

(c) Observation and prediction of the behavioral changes accompanying alcohol consumed in such "natural" social settings as bars and clubs.

(d) Special advisory services and consultations by [redacted] (formerly reimbursed under MKULTRA, Subproject No. 63, which has been discontinued).

3. The project will continue to be financed through [redacted] The [redacted] acts in the capacity of a cover organization. The cost of the program for this year will be

2 IMPDET; CL BY

$30,475.00. Charges should be made against Allotment 9-2502-15-902.

4. [redacted] will request [redacted] submit to them a summary accounting of monies received from the [redacted] They will request return of any unexpended funds received under [redacted] from the [redacted] at the conclusion of the program.

5. Requirement for a six month informal accounting on the part of the principal investigator is waived.

6. Title to any permanent equipment purchased by fund [redacted] will be retained by the [redacted] in lieu of higher overhead rates.

7. It was agreed that technical reports reflecting the progress of the research program will be submitted at mutually acceptable intervals.

8. [redacted] is cleared through TOP SECRET and is aware of the true nature of the project.

Memorandum to [redacted] C

Subject: Termination of [redacted] B

After careful consideration and negotiation with hospital authorities and the principal investigator, it was agreed that the project at [redacted] B should not be renewed. It was officially closed September 30, 1959, the end of the [redacted] B year. In view of reporting costs, it was agreed that expenses for closing out the project would be reimbursed by [redacted] B

Attached is the final accounting on this [redacted] B. This has been examined by me and to the best of my knowledge, is a true statement of expenses accrued. [redacted] B has forwarded the sum of $2,680.87 to [redacted] B and is consequently due for reimbursement.

Not included in the attached accounting is the preparation for an Alcohol Conference which was planned for October 1960. As agreed, the conference has been cancelled. Costs for travel, correspondence, telephone etc. accrued during the planning have been borne by [redacted] B Payments to [redacted] C and [redacted] C are accounted for in the [redacted] B Consultants' account.

The final technical report is being finished now and should be in the hands of [redacted] B within two weeks. After possible editorial changes have been made it will be forwarded to you.

The items of equipment purchased from funds of this [redacted] B are listed on the attached sheets and are being conveyed to the project according to verbal agreement previously made.

PROPOSAL - ALCOHOL STUDY - 1958-59

Introduction

After 1½ years of experimental work with alcohol consumed in a setting of social drinking we find that we are far less acquainted with the nature and conditions of alcohol reactions than we have been with L.S.D. reactions. There could be a number of reasons for this. One is that the [redacted] blind study of alcohol with L.S.D. was a pilot study and that this past year was an experimental study, and we haven't spent enough time with alcohol to sort out the determining factors. The other possibility is that alcohol is less specific in its action, more dependent on the immediate emotional mood and recent set of the subject as well as the situational tone and setting. As of the moment we tend to favor the latter interpretation. Nevertheless both suppositions lead to a somewhat different approach or emphasis in the future study of alcohol than we used with L.S.D. Three approaches are proposed.

Part I. Continuation of double-blind "laboratory" studies in our specifically designed observation room.

The first approach proposed is to take maximum advantage of opportunities to observe interaction effects of alcohol and specific emotional moods and sets. During the past year we have emphasized

66-17

broad personality and situational determinants by interviewing and testing selected subjects and then observing and predicting behavior while drinking and socializing in a series of cocktail parties conducted in our specifically designed barroom. A certain degree of predictability was achieved considering just these variables, but one of the main findings was that the mood and current set of the subjects - up to now an essentially uncontrolled variable - has as much or more to do with alcohol effects as the more general personality characteristics and situational setting which we did control. Our first proposal, therefore, is to continue the cocktail party experiments with a group of the same subjects observed last year, but scheduling the experimental sessions at times when the subjects are naturally and spontaneously experiencing unusual stress, identifiable mood changes, and/or a special need to drink (or not to drink). The subjects would be staff members available for spur of the moment sessions. In addition to observing these persons under the special circumstances in which effects of alcohol can be expected to vary maximally, careful case histories would be worked up for each subject, detailing cultural and family conditioning to alcohol and current attitudes toward its use. Emphasis would be on such things as the religious, the food and refreshment, the drug, the recreational, the therapeutic, and the self-defeating implications of the use of alcohol by individuals.

Results of our prediction efforts for the past year's work, while disappointing on the face, nevertheless suggest these and other areas in

which prediction can be sharpened. In other words, by continuing and repeating the "laboratory" experiments including the new data described above, it may be possible for us to specify the absolute minimum information required in addition to the basic personality variables indicated by the [redacted]heory to achieve significant predictability.

Part 2. Observation and prediction in natural drinking situations.

Anticipating that a more careful consideration of mood, current attitudes, and set for drinking will yield higher predictability of effects, we believe we will be ready to move our observation and prediction efforts into truly natural settings. The notion here is that several of the experimenters would frequent a bar often enough to be able to describe the general attitudes of the place, its cultural status, and the reactions over time and on repeated occasions of a selected sample of regular habituees who regard the bar as a kind of local "club". The procedure would be to observe the mood, behavior, condition, and apparent intent of the target individual during the first half-hour after his arrival, and then to predict changes in mood, behavior, or intent during, say, the third or fourth half-hour. After several repeated observations and prediction efforts on a given individual, an effort would be made to approach the individual, gain rapport, and enlist his cooperation in obtaining the same kind of detailed case history as obtained in Part 1 above. This part of the study would thus function as a kind of cross-validation for the hypotheses which would be investigated with greater precision but with

66-17

less face validity in Part I of the study.

Part III. Study of Alcohol as an Institution.

We see a need to bring together the results of the proposed research and much of what is already accomplished into some overall frame of reference. It is our notion that alcohol can be looked upon as a social institution and should be studied in the same manner as the sociologist studies, religion for example. The institution should be investigated in all its aspects - in terms of production, distribution, propaganda concerned with alcohol, the cultural sanctions and prohibitions relative to its use, and those variations imbedded in specific groups within our culture. For some groups of people one could conceive of alcohol as a religion, another as a drug, another as a lubricant or adjunct to sociability, and another as an excuse for sociability -- these latter being the everyday therapeutics of alcohol.

Part III is an important pre-condition, we believe, to producing a useful, meaningful, and reliable protocol for observing and predicting overt changes in behavior under a specific set of circumstances. We understand that such a protocol, applicable to a wide variety of investigations, is one of the major interests of the sponsoring [redacted] and it is one of the ultimate goals of this project.

[redacted]B

[redacted]C

Attached is our check in the amount of Six Thousand Dollars ($6,000) in payment on [redacted]B

You have had six months of eventful operation up to this point and it seems reasonable to make the following request. Would you please tell us how your expenditures are comparing with the budget which you submitted initially. Are there adjustments that should be made in the last payment of the grant which will be sent on or about June 1st.

Our computation of the overhead charge beginning about January 1st indicates that the final amount should be $4,975.00 which provides for the adjustsnt in overhead.

Looking forward to seeing you soon.

Sincerely,

[redacted]C
Executive Secretary

September 20, 1957

[redacted]B

[redacted]C

Enclosed is our check for $2550, which, I believe, terminates our fin[redacted]B There is a question in my mind, however, about the computation of overhead charges (see my letter of April 17). I hope you will check your files, and see if we are in accord on the amount.

The renewal of your [redacted]B has passed the critical phase of a staff sign off, but the statement of projected expenses which was worked out in August has been pared down in some categories. The changes are:

	Projected	Accepted
Equipment & supplies (including one-way mirror)	$2653.76	$1553.76
Conference expenses	1500.00	1000.00
Travel	1000.00	500.00

A copy of the amended budget is enclosed.

While this budget cuts down some of the supporting activities we had envisioned, you will note that the budget for staff, consultant services, and increased clerical assistance remains as you requested.

The final step is to submit to [redacted]B Board of Directors a prospectus for this year's research. This prospectus should be somewhat more detailed than the one which you provided [redacted] during his visit last month. It should specify the seven main areas proposed for attention this year:

1. Specification of individual differences in eye utilization. (Further development of pre-experimental observation techniques useful for prediction of experimental behavior).

[redacted] NOTICE

66-32

II. Prediction of subjects' reaction to drug in various situations (both structured and "natural" social situations).

III. Use of total blind drug studies as a means for testing evaluation and prediction techniques.

IV. Development of formal prediction scales on the basis of work outlined in I, II, and III.

V. Observation of previously unknown individuals during intoxication (alcohol or other drugs) as a basis for predicting normal personality.

VI. Alcohol literature review - emphasizing social and personality determinants of intoxication.

VII. Conference on alcohol

The prospectus should also summarize briefly the procedure and results of last year's alcohol-LSD experiment. The purpose of submitting the prospectus to the Board is a formality intended to keep the Board members advised on the progress of the project and to inquire any assistance or advice they can individually render.

I hope you can get this prospectus to [redacted] within a couple of weeks. In the meantime [redacted] is planning a visit to [redacted] sometime early in October. I would appreciate your advising me what dates would be most convenient. I hope that during this visit you will be able to go over each of the seven activities, but probably emphasis should be placed on design of the experiment.

[redacted] would like to have another conference on his personality theory with [redacted] (and anyone else interested). He, too, would plan to come up sometime in October.

Best wishes to all of you.

Sincerely,

[redacted]
Executive Secretary

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKULTRA, Subproject No. 66

1. It is requested that MKULTRA Subproject No. 66 be continued to support the research program on the determinants of alcohol intoxication undertaken at [redacted] by [redacted] and associates. The program will be continued for one year starting 16 September 1957 through 16 September 1958.

2. The scope of the project will include (a) continuation of blind experimental studies of drug effects, employing various "alcohol placebos" and chemical extenders developed by TSS/CD; (b) continuation of studies or predictors of intoxication; (c) exploration of the feasibility of obtaining significant observations in natural social-drinking situations as a basis for assessing "normal" personality; (d) development of checklists and other types of formal prediction scales. A detailed proposal is attached.

3 The project will continue to be financed through [redacted] acts in the capacity of a cover organization. The cost of the program for this year will be $29,052.88. Charges should be made against allotment 8-2502-10-001.

[redacted] will request [redacted] to submit to them a summary accounting of monies received from [redacted] They will request return of any unexpended funds received under [redacted] from [redacted]

5. Requirement for a six month informal accounting on the part of the principal investigator is waived.

6. Title to any permanent equipment purchased by [redacted] fund [redacted] will be retained by [redacted] in lieu of higher overhead rates.

7. It was agreed that technical reports reflecting the progress of the research program will be submitted at mutually acceptable intervals.

"Predictors

The past years' studies have indicated to us the relative importance of dosage, demographic, personality, and situational determinants of the reaction to L. S. D. Our most recent findings have indicated to us that in the problem of prediction certain important variables are crucial. First, we found that different observers use different media of assessment upon which they base their predictions. These media are closely related to the observer's values and his methods of evaluation which he uses in his every day functioning. Second, the personality of the subject whose reaction is being predicted figures importantly in the success of the prediction. That is, some subjects have clearly discernible patterns of behavior, traits, or characteristic about which consensus is easily reached by several observers. These characteristics have not been clearly delineated but that they do exist as distinguishing characteristics. Third, some observers are able to predict severity of reaction more accurately while others are able to predict the quality of the reaction more accurately. Others are able to predict both severity and quality of reaction equally as well or as poorly, whatever the viewpoint taken.

Fourth, some subjects' severity of reaction are more successfully predicted than others by all observers while other subjects' quality of reaction is more successfully predicted.

All the above four points are closely interrelated and like the specification of the major L. S. D. determinants, their relative importance and the way in which they interlock to result in successful prediction need specification and clarification. This is to be the major focus of the research for the coming year.

MEMORANDUM FOR: CHIEF, FINANCE DIVISION

VIA: TSS/Budget Officer

SUBJECT: MKULTRA Subproject 66, Invoice No. 2, Allotment T-2502-10-001

1. Invoice No. 2 for the above subproject is attached. Payment should be made as follows:

Cashier's check in the amount of $10,333.34, drawn on a [redacted] Bank, payable to [redacted]

2. Please forward the check to Chief, TSS/Chemical Division through TSS/Budget Officer by Friday, 1 February 1957.

3. This is a final invoice. A total of $24,000.00 was obligated under this subproject during FY 57. However, since it is anticipated that additional funds will be obligated for this project, the files should not be closed.

DRAFT [redacted] A
29 August 1956

MEMORANDUM FOR THE RECORD

SUBJECT: MKULTRA Subproject 66

1. Subproject 66 is being initiated as a means to support a research program in the general field of predicting drug efforts to be undertaken at the [redacted] under the direction of [redacted] Program will be for a period of one year starting 15 September 1956 through 16 September 1957.

2. The scope of the project will be (a) to systematically test a number of techniques for predicting a given individual's reaction to LSD 25, other psychochemicals and alcohol, (b) to determine the extent that these techniques can be employed to predict reactions to stress situations other than those produced by psychochemicals, (c) to test out the feasibility of training non-professional observers in the use of these evaluation and prediction techniques and (d) to study the intoxication produced by alcohol consumption in a "social drinking situation" and relating this to LSD intoxication. A detailed proposal is attached.

3. This project will be financed through the [redacted] will act in the capacity of a cover organization. The cost of the program for a period of one year will be $24,500.00. Charges should be made against Allotment 7-2502-10-001.

4. [redacted] will request [redacted] to submit to them a summary of accounting of monies received from [redacted] They will request the return of any unexpended funds received under [redacted] from [redacted]

5. Requirement for a six month informal accounting on the part of the principle investigator is waived.

6. Title to any permanent equipment purchased by funds [redacted] will be retained by [redacted] in lieu of higher overhead rates.

7. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by [redacted] will conform with the accepted practices of that institution.

PROSPECTUS

Prediction Studies:

In our three years of research with LSD-25 this research group has been concerned with describing the effects of LSD-25, accounting for the rather wide individual differences observed, and identifying the determinants of the drug effects. Sufficient progress has been made to give promise to the development of methods for predicting the reaction to LSD-25 of a given individual in a given social situation. If, upon further analysis of our data, our tentative prediction method proves reliable, it may be generalized to predicting reactions to (a) other drugs and (b) other specific environmental events or agents. Our particular interest is in refining and generalizing the method to predict an individual's reaction to specified social situations in his environment.

Our immediate objectives for the initial phases of this study will be:

(a) To systematically determine the extent to which the observations made prior to administration of LSD to approximately 100 subjects studied in the past can be employed to predict the individual's reaction to LSD-25.

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

66-44

(b) To determine what additional observations would be required to make reliable predictions. That is, to determine what data is essential and what data is redundant.

(c) To determine the extent that these observations can be employed to predict reactions to situations other than the administration of LSD-25. Such "other situations" might include: reaction to alcohol, especially where consumed in a "social drinking" situation; rehabilitation of hospitalized patients; reaction to various situations of "natural" social stress.

Budget:

Personal compensation (salaries)	22,000
Equipment	--
Supplies and services	1,500
Contingencies, travel	1,000
TOTAL	$24,500.00
