DRAFT [redacted]
17 August 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : Supplement - MKULTRA, Subproject 68

1. Subproject Number 68 is being continued as a means to sustain a research program, the effects upon human behavior of the repetition of verbal signals. The program is under the direction of Dr [redacted], Chairman of the Department of Psychology, [redacted] B|C|F

2. The scope of the program will encompass the same studies outlined in the previous draft dated 27 March 1959 which is attached.

3. It is anticipated that long term support for this study will be provided by other organizations (one such organization is the U.S. [redacted] where negotiation assisted by th[redacted] has been underway for approximately 6 months), therefore, this project is being continued for a three month period only. In view of this short continuation, [redacted] will be authorized delay of the final reporting on expenditures and a terminal technical report. B

B|F

4. This project will be funded through th[redacted] The cost of the program for a period of three months will be $4,775.00. Charges should be made against Allotment 1525-1009-1902. B

5. In lieu of higher overhead rates, title to any permanent equipment purchased by funds granted the University shall remain with the University.

DRAFT [redacted]
27 March 1959

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKULTRA, Subproject 68

1. Subproject 68 is being continued as a means to support a research program, the effects upon human behavior of the repetition of verbal signals. The program will be under the direction of Dr. [redacted] Chairman of the Department of Psychiatry at [redacted] The program will be for a period of one year, starting 18 March 1959.

2. The scope of the project encompasses studies upon the effects of predetermined signals upon (a) physiological functions, (b) patterns of behavior. The immediate objectives of the program entail a study of methods to (a) improve the technique of heteropsychic driving (b) to investigate the range of physiological functions which can be changed by these procedures. More specifically, these studies include:

(1) A search for chemical agents which will breakdown the ongoing patterns of behavior:

more rapidly
more transitorily
with less damage to the perceptive and cognitive capacities of the individual than the present physiological agents.

(2) An attempt to develop better methods of inactivating the patient during the period of driving (exposure to repetition), and at the same time maintain him at a higher level of activity, by physiological and chemical agents, than by the present physical effects. Among the chemical agents which are being explored with respect to their capacity to produce inactivation are the following (used either singly or in combination):

Artane
Anectine
Bulbocapnine
Curare
LSD-25

3. The project will be funded through [redacted] C
[redacted]. The cost of the program for a period of one year will be $19,090.00. Charges should be made against Allotment 9-2502-75-902.

4. [redacted] will C
request [redacted] to submit to it an annual accounting summary of monies received from [redacted] will also request the return of any unexpended funds received under the grant from [redacted]

5. Requirements for a 6-month informal accounting on the part of the principal investigator have been waived.

6. In lieu of higher overhead rates, title to any permanent equipment purchased by funds granted the University shall remain with the University.

7. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the University will conform with the accepted practices of that institution.

8. It was also agreed that technical reports reflecting the progress of the research program will be submitted to the Society at mutually acceptable intervals.

9. In view of the fact that [redacted] the B/F
following security considerations should be noted:

1. Dr [redacted] the principal investigator, and his C/F
staff will remain completely unwitting of [redacted] Government interest.

2. The project will be monitored by the [redacted] C
[redacted]

3. No Agency staff personnel will contact, visit, or C/F
discuss this project with Dr [redacted] or his staff except under extreme circumstances.

MEMORANDUM FOR THE RECORD: C/F April 23, 1959

SUBJECT: Dr. [redacted] Project

In my meeting with Dr. [redacted] on April 17, I told him that it would be acceptable for him to utilize remaining funds for the forthcoming year of research to be taken into account in the final financial report. C

I made informal arrangements with Dr. [redacted] to provide a succinct summary of their observations for our purposes in the near future. I was informed that they have completed over 100 cases with some rather dramatic results, particularly with neurotics. C

[redacted] B/C

Dear Dr. [redacted] C

Dr. [redacted] was extremely impressed by his visit to your active and productive [redacted] C As usual, I enjoyed it very much and join him in thanking you for your time and your hospitality.

We received the accounting of expenditures for the two-year period which is satisfactory for our purposes. I should like to confirm my verbal instruction that the balance on hand of March 31 in the amount of $2,353.80 be utilized during the forthcoming year, and that it be taken into consideration in the final accounting of March 31, 1960.

Dr. [redacted] very kindly offered to provide a brief summary, of the number of subjects treated, in what categories, and with first appraisal of results, for our use here. I hope he will make explicit some of your feelings at the Center regarding the innovative aspects of the driving technique compared with other techniques in psychotherapy. C

Sincerely yours,

[redacted] C

MEMORANDUM FOR: CHIEF, FINANCE DIVISION

VIA : TSS/Budget Officer

SUBJECT : MKULTRA, Subproject 68, Invoice #2, Allotment 7-2502-10-001

1. Invoice #2 covering the above subproject is attached. It is requested that payment be made as follows:

Cashier's check in the amount of $19,100.00, drawn on [redacted] payable to [redacted]

2. The check should be forwarded to Chief, TSS/Chemical Division, through TSS/Budget Officer, no later than 30 April 1958.

3. This is a final invoice. A total of $38,180.00 was obligated under this subproject during FY 57. However, since it is anticipated that additional funds will be obligated for this project, the files should not be closed.

DRAFT/[redacted] A
26 February 1957

UNCLASSIFIED; CL MEMORANDUM FOR: THE RECORD

SUBJECT: MKULTRA Subproject 68

1. Subproject 68 is being initiated as a means to support a research program, the effects upon human behavior of the repetition of verbal signals. The program will be under the direction of Dr. [redacted] The program will be for a period of two years, starting 18 March 1957. B/C/F

2. The scope of the project will encompass studies upon the effects of predetermined signals upon (a) physiological functions, (b) patterns of behavior. The immediate objectives of the program will entail a study of methods to (a) improve the technique of heteropsychic driving, (b) to investigate the range of physiological functions which can be changed by these procedures. More specifically, these studies will include:

(1) A search for chemical agents which will breakdown the ongoing patterns of behavior:

more rapidly
more transitorily
with less damage to the perceptive and cognitive capacities of the individual than the present physiological agents.

(2) An attempt to develop better methods of inactivating the patient during the period of driving (exposure to repetition), and at the same time maintain him at a higher level of activity, by physiological and chemical agents, than by the present physical effects. Among the chemical agents which we propose to explore with respect to their capacity to produce inactivation are the following (used either singly or in combination):

Artane
Anectine
Bulbocapnine
Curare
LSD-25.

E2 IMPDET; CL BY 187475

For a more detailed discussion of the program see attached proposal. It should be added that the attached proposal has been submitted to all members of the [redacted] and has been unanimously approved by that body. The Board anticipates making this grant by 18 March 1957. C

3. This project will be financed through [redacted] will act in the capacity of a cover organization. The cost of the program for a period of two years will be $38,180.00. Charges should be made against Allotment 7-2502-10-001. C

4. [redacted] will request [redacted] to submit to it an annual accounting summary of monies received from [redacted] will also request the return of any unexpended funds received under the grant from the Society. B/F C

5. Requirements for a 6-month informal accounting on the part of the principal investigator is waived.

6. In lieu of higher overhead rates, title to any permanent equipment purchased by funds granted the University shall remain with the University.

7. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the University will conform with the accepted practices of that institution.

8. It was also agreed that technical reports reflecting the progress of the research program will be submitted to the Society at mutually acceptable intervals.

9. In view of the fact that [redacted] the following security consideration should be noted: B/F

1) Dr. [redacted] the principal investigator, and his staff will remain completely unwitting of [redacted] Government interest. C/F

2) The project will be monitored by [redacted] staff member of th[redacted] C B

Department of Psychiatry

[redacted] B/F

January 21, 1957

APPLICATION FOR GRANT

TO STUDY THE EFFECTS UPON HUMAN BEHAVIOR

OF THE REPETITION OF VERBAL SIGNALS

1. General Purposes

We are requesting a grant to support studies upon the effects upon human behavior of the repetition of verbal signals. Our present interest is directed towards both (a) the production of changes in behavior, and (b) changes in physiological function, the major emphasis to be upon the latter because of the greater ease of measurement.

2. Background

The effects upon human behavior of the repetition of verbal signals have been under study at the [redacted] since June 1953. B/F

A. The early investigations were based upon the observation that repeated playback of particularly significant statements made by the patient during psychotherapy elicited a number of phenomena:

(a) Increased productivity by the patient of material of dynamic significance.

(b) The material was related to the statement repeated (or driven).

(c) Increased identification of significant components in the repeated material.

(d) This increased identification, or recognition, of significant components was particularly marked in the patient. It was also evoked in the therapist.

[redacted]

These observations were reported in an article entitled Psychic Driving, published in the American Journal of Psychiatry. The significance of the findings in connection with psychotherapy was also reported.

Working hypotheses concerning these effects of repetition were set up, among them being:

(a) hypothesis of the work of listening;

(b) hypothesis of the work of talking;

(c) hypothesis concerning the shielding of the meaning of the verbal signals, particularly from the talker but also from the listener.

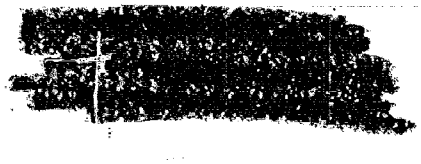

B. Further studies brought to light the existence of the dynamic implant, this being the designation given to the fact that exposure to repetition of verbal signals leaves the patient sensitized to the community of action tendencies from which the driving statement was taken. This also has been reported in an article entitled Psychic Driving: Dynamic Implant, now awaiting publication in the Psychiatric Quarterly. The following observations were made concerning the dynamic implant:

i. By continued replaying of a cue communication, a persistent tendency to act in a way which can be predetermined with respect to its general characteristics can be established. In other words, by driving a cue communication one can, without exception, set up in the patient a persisting tendency for that cue statement, and other components of the community of action tendencies from which it was drawn, to return to his awareness.

ii. The dynamic implant thus established, and especially if reinforced by repeated driving, tends to activate more and more of the components of the relevant community of action tendencies. These components tend to appear in the patient's awareness.

iii. This materially contributes to problem identification by the patient and the therapist and, hence, facilitates the processes of therapeutic reorganization.

iv. The dynamic qualities of the implant are a function of: (a) the amount and repetition of driving; (b) the intensity of the response; (c) the defenses; (d) stress tolerance; (e) capacity for desensitization.

v. The major continuing effects of the dynamic implant are: (a) progressive problem identification; (b) resulting reorganization of behavioral patterns; (c) negative evaluation of neurotic patterns present in the cue communication used in driving.

C. Continued study of the effects of repetition on the patient of his own verbal signals opened up an additional line of inquiry. This was based upon the finding that a given verbal signal conveys considerably more than its verbal content. Special apparatus was built to explore this new field of ultra-conceptual communication. The following findings were reported at the 1956 meeting of the American Psychopathological Association:

i. That signals are made which are not conceived as such by the signaler, at least at the time he makes them.

ii. That signals are received which are not conceived as such by the listener, at least at the time that he first listens.

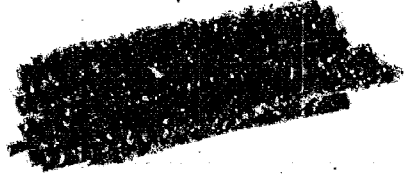

iii. That a range of signals may be made which will only at times be conceived by the signaler and the listener as such.

iv. The ability of both the signaler and the listener to recognize signals may be increased and also decreased.

v. It is probable that there is a range of signals which cannot be understood by either, but which may, nonetheless, evoke an appropriate response in the listener.

D. Our studies now turned to attempts to establish lasting changes in the patient's behavior, using verbal signals of a predetermined nature and of our own devising. After considerable experimentation, we have developed a procedure which in the most successful case has produced behavioral changes lasting up to two months. The procedure requires:

i. The breaking down of ongoing patterns of the patient's behavior by means of particularly intensive electroshocks (depatterning).

ii. The intensive repetition (16 hours a day for 6 or 7 days) of the prearranged verbal signal.

iii. During this period of intensive repetition the patient is kept in partial sensory isolation.

iv. Repression of the driving period is carried out by putting the patient, after the conclusion of the period, into continuous sleep for 7-10 days.

E. Finally, in association with Dr. [redacted] we have sought to bring about physiological change by the repetition of appropriate verbal signals. We have used the same technique as is outlined above for the production of behavioral change. We have been successful in achieving change in physiological function with respect to:

(a) the balance of flexor and extensor muscles in the arm;

(b) the relationship of the blood pressure levels in the right and left arms.

3. Specific Proposals

We now propose to carry on further studies upon the effects of predetermined signals upon: (a) physiological functions; (b) patterns of behavior. To further this, we have two major, immediate objectives:

i. To improve the technique of heteropsychic driving (the repetition of predetermined verbal signals of our own devising).

ii. To investigate the range of physiological functions which can be changed by these procedures.

First Objective: Among the studies which we propose to carry out in pursuit of our first objective are:-

(a) Can we find chemical agents which will serve to break down the ongoing patterns of behavior:

more rapidly
more transitorily
with less damage to the perceptive and cognitive capacities of the individual than the present physiological agents.

[redacted]

(b) Can we improve our methods of signal production, possibly by using a multiplicity of voices, with the purpose of capitalizing upon the force of group decision and suggestion.

(c) Can we develop better methods of inactivating the patient during the period of driving (exposure to repetition), and at the same time maintain him at a higher level of activity, by physiological and chemical agents, than by the present physical effects. Among the chemical agents which we propose to explore with respect to their capacity to produce inactivation are the following (used either singly or in combination):-

Artane
Anectine
Bulbocapnine
Curare

We propose to use LSD 25 and other similar agents as a means of breaking down the ongoing patterns of behavior.

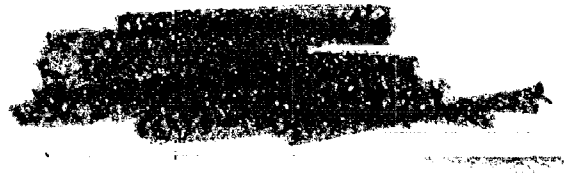

Second Objective: Among the other physiological functions which we intend to explore with regard to their amenability to change in consequence of the repetition of verbal signals are:

palmar skin conductance
skin temperature
healing of wounds

Procedure to be followed:

The initial procedure which we propose to employ is that already outlined under section D. From the context, however, it will be clear that we hope to be able to modify and improve the procedure as we proceed.

The patients selected are almost entirely those suffering from extremely long-term and intractable psychoneurotic conditions. In the case of results of physiological driving, the validity of the findings can be assessed by statistical analysis. Repeated estimations of the particular physiological function are made prior to driving and at various periods subsequent to driving (exposure to repetition). In the case of the studies upon the effects upon behavior of exposure to repetition of verbal signals,

the patients are studied exhaustively in psychotherapeutic interviews and by psychological test procedures prior to exposure to repetition, and by the same means at various intervals subsequent to exposure. In addition, follow-up studies are carried on through our Social Service section subsequent to the discharge of the patient.

In the case of physiological studies, results can be based on relatively small groups of from four to six cases in each category, where the results are as consistent as those which we obtained with muscle potentials. In regard to shifts in behavioral pattern, considerably larger numbers are required--up to twenty patients.

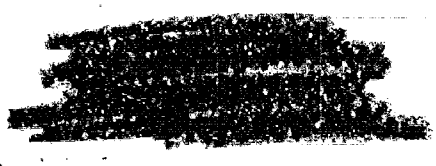

The other aspects of our procedures have already been indicated under the heading of "Specific Proposals."

4. Budget

Full time research psychiatrist	$7,000.	
Part time electronics technician	2,500.	
Assistance with measurement of records and computations	2,000.	
Consultants	1,000.	
Travel	500.	
2 - Concert Master continuous tape players..	1,810.	
2 - Message-repeating mechanisms	320.	
2 - Rotary switch mechanisms	400.	
32 - Speaker units	320.	
Miscellaneous materials & supplies (recording paper, electronics supplies, pharmaceuticals)	750.	
	$16,600.	
Plus: 15% Overhead	2,490.	$19,090.

We are requesting the foregoing budget for a period of two years, with the anticipation that at the end of that time we shall have made sufficient headway to draw up further proposals to open up this field.

The names and qualifications of the personnel working on this project are as follows:-

	Proposed Salary
[redacted]	None
	C/F
[redacted]	None
Electronics technician (part-time)	$2,500.
Full time research psychiatrist(preferably a graduated member of our own 4-year postgraduate training program)	$7,000.
Additional technical assistance (to be selected)	$2,000.
Consultants (to be selected), proposed total honoraria	$1,000.
