Proposal for a Project in the Field of Stimulants (Psychological)

Introduction: Same

Project: A Project for the evaluation of the psychological phenomena observed in human beings under stimulantion.

Materials: Common stimulants in their pure and available forms- Specific materials to be aggreed upon with the contractor.

Phases:

1) Effect of stimulation progressively upon
   a) Coordination
   b) Dexterity
   c) Reasoning Power
   d) Memory
   e) Inhibitions
   f) Perception
   g) Initiative

2) Determination of the character of hallucinations, if any, which result. e.g.- Vision of colors

3) Relation of these hallucinations, if possible, to past experience of the subject.

4) Determination of the psychological phenomena observable which would be valid warnings of an approaching condition of coma or death.

Variables on humans suggested for Project above:
Rested and fatigued
Hungry and Fed
Normal
Neirotic
Young and Old
Moody
Cheerful
Smokers and non-smokers. (Chewing tobacco) Both
Both Sexes
{Used to Stimulants e.g.
{Not used to
Stout & Skinny. ([illegible])
