Office Memorandum • UNITED STATES GOVERNMENT

TO : FILE

DATE: 26 January 1953

FROM : [redacted] A

SUBJECT: [redacted] H-B/3

B/3 1. The [redacted]. The Company itself professionally has an excellent trade reputation. During recent research in connection with the project ARTICHOKE, [redacted] Medical A Division was informed by certain officials of the [redacted] that [redacted] is doing advanced work in connection with the hypospray devices.

A H-B/6 2. In this connection [redacted] was advised to see [redacted] who is an outstanding engineer and director of research of the [redacted] was reported to [redacted] as being [redacted].

B/6 3. In order to see [redacted] requested a special contact type of clearance through Security which was obtained immediately and during the week of 19 January 1953, [redacted] visited [redacted] A

A [redacted] reported that they were doing very advanced work in the field of hypospray but that because of their inability to resolve the pain factor and several other factors in connection with the hypospray, the Company was shelving work on the hypospray at the present time. [redacted] stated they had a great many different types of hypospray--some mechanically powered, some powered by gas; and some powered by hydraulic devices. [redacted] stated that at the present time, based on their work, he felt that immediate use of hypospray as far as ARTICHOKE is concerned did not appear feasible, but stated he thought some work would probably be done in connection with ultra-high pressure hypospray devices that might be successful. [redacted] is preparing a report for the Medical Division in this connection and copies will be given this Office upon completion.
