Dr. Harris Isbell
Director, Addiction Research Center
National Institute of Mental Health
Lexington, Kentucky

Dear Doctor Isbell:

Yes, the 1,2-dimethyl homolog is the material studied by Loew except it is a mixture of isomers, that is, it may contain compounds with the methyl group in various positions and, because of the number of asymmetric carbon atoms there may be several stereo isomers present. The formula is as follows:

Because Dr. Deitschi has had to give a number of lectures and has to fulfill a number of other commitments, he may find it a little difficult to send you his data in advance. However, he will try his best.

Sincerely yours,

Glenn E. Ullyot
Associate Director of
Research and Development
