Dr. Harris Isbell
Director of Research
U.S. Public Health Service Hospital
Addiction Research Center
Box 2000
Lexington, Kentucky

Dear Dr. Isbell:

Your letter of 28 October 1958 was most informative and is greatly appreciated.

The observations on the sedative effect of compound No. 23194 as well as your comments on Dr. Janssen's compound are most interesting. Both materials may well prove to be of considerable value in our research endeavors.

The thermofax copy of Dr. Hoffman's presentation on Psilocybin is greatfully received and provides us with much needed background information. I have read with a great deal of interest your annual progress report on the addiction liabilities of synthetic substitutes for codine. With reference to the previous mentioned compound of Dr. Janssen I would appreciate being kept informed should the compound or reports on its experimental use become available.

I am planning to visit you in January at a time acceptable to you. If you have any suggestions as to dates acceptable to you please advise me.

With kindest personal regards,

B-86
