NOTE: [redacted]

Influencing Human Behavior

a. Capabilities

[redacted]

[redacted]

H

TSS has developed, and has under continuing study, a number of procedures for influencing and predicting human behavior by chemical and psychological means. These techniques have both defensive applications (such as defense against interrogation and effects of isolation) and offensive applications (use of psycholochemicals to control or discredit an individual). They also may be useful in agent evaluation and in other ways.

b. Limitations

Much of this work involves pioneering in little-understood aspects of psychology. Testing of certain techniques on humans is difficult and, in some cases, impossible.

c. Objectives

Continue study in the field and make the findings available on a strictly-controlled, need-to-know basis.
