Too little knowledge
on these 5 sub-projects:

80, 93, 141, 144,
145,

80 = $25 K
93 = $15, K
141 = $40K
144 = $26 K
145 = $15.5 K

$ 121,500 Total

SUB-PROJECT NO. 1

PRINCIPAL RESEARCHER AND LOCATION: [redacted] Princeton University

OBJECTIVE AND DETAILS OF WORK: To isolate and characterize the alkaloids of impomea sidaplia choisy (rivea corymbosa); to identify and characterize the agents affecting the central nervous system of human beings. [redacted] was to perform a literature search, chemically examine the seeds and their extracts for alkaloidal materials, and to determine specific methods for the isolation and purification of those alkaloids.

APPROXIMATE TIME SPAN: 1953-1954

SIGNIFICANT ASPECTS: None noted

FUNDING:

COVER MECHANISM: Notional

APPROXIMATE TOTAL: $1,300 in Sterile Cashier Check

RESEARCH PARTICIPANT: [redacted] - Witting

OTHERS: [redacted] had a [redacted] Fellowship at Princeton during the time frame of this project. There is no indication in the file that [redacted] was associated with or aware of Agency participation.

NAMES OF CIA MONITORS: Robert V. Lashbrook

[redacted]

APPROVERS: Sidney Gottlieb

Willis A. Gibbons

Luis deFlorez

SUB-PROJECT NO. 2 (See also Nos. 124 and 140)

PRINCIPAL RESEARCHER AND LOCATION: [redacted]

OBJECTIVE AND DETAILS OF WORK: To do miscellaneous research and testing services in behavioral modification. Only two specific project proposals are contained in the file: The first is a proposal to study the possible synergistic action of drugs which may be appropriate for use in abolishing consciousness through animal experimentation, and, the second is a proposal for a survey of methods to enable the administration of drugs to patients without their knowledge. There is no record of project activity or results. Served as a contact and cut-out for projects in this field, primarily in the [redacted] Also monitored selected projects located in the [redacted] area and served as a general consultant and adviser. In addition, [redacted] acted as medical adviser and consultant to Mr. Morgan Hall.

APPROXIMATE TIME SPAN: 1953-1958

SIGNIFICANT ASPECTS: Animal testing is indicated in project proposals as a precondition to human testing. Human testing implied but money only requested for animal testing. File does not indicate whether human testing occurred or whether it was to be on volunteers or non-volunteers. As Morgan Hall believed

SIGNIFICANT ASPECTS: (Continued)

to have been doing testing on unwitting subjects, it is likely that [redacted] was on call for problems encountered by Hall.

FUNDING:

COVER MECHANISM: None

APPROXIMATE TOTAL: $20,000 paid by check, both Treasury and Cashiers.

RESEARCH PARTICIPANT: [redacted], cleared TOP SECRET, and on a contract basis - Witting.

OTHER SPONSORS: None indicated

MEMORANDUM FOR: THE RECORD

SUBJECT : Project MKULTRA, Subproject ~~A~~ 2

1. Subproject 2~~A~~ is being initiated to provide a secure and efficient means of exploiting [redacted] with regard to the MKULTRA program.

2. [redacted] is a practicing psychiatrist in [redacted], and a faculty member of Stanford Medical School. He has been of value in the general MKULTRA project, serving as an advisor and consultant, contacting individuals in the [redacted] area, and carrying out his own research program.

3. Subproject 2~~A~~ would include the following:

(a) Miscellaneous research and testing services in the general field of MKULTRA.

(b) Services as a contact and cutout for projects in the MKULTRA field, primarily those located in the [redacted] area.

(c) Monitoring of selected projects in the MKULTRA field, when located in the [redacted] area.

(d) Services as a general consultant and advisor in the MKULTRA field.

(e) He would act as medical advisor and consultant to Mr. Morgan Hall and his [redacted] establishment.

4. [redacted] will be reimbursed for his services and expenses upon receipt of an invoice at irregular intervals. When travel expenses are incurred through use of a common carrier, they will be documented and reimbursed in the usual manner; that is, consistant with standard Government allowances.

PROPOSAL.

Objective: To study the possible synergistic action of drugs which may be appropriate for use in abolishing consciousness.

Situation: There is reason to believe that two or more drugs, used in combination, are more effective than single drugs. The combined effect of some drugs, such as combinations of barbiturates, are known. With other combinations, the degree of synergism is not known. If considerable synergism is found to exist, two possibilities must be considered: (1) that a particularly useful combination may be found, and (2) that a particular combination may be hazardous because of its effect on respiration or some other vital function. To minimize hazards, animal experiments should precede human experiments.

Proposal: Allocation of $1000 for animal experiments, to be drawn on as needed. That experiments be conducted informally at Stanford without a specific grant, and with appropriate cover.

PROPOSAL

Objective: To study methods for the administration of drugs without the knowledge of the patient. Preparation of a manual.

Method: A survey of methods which have been used by criminals for surreptitious administration of drugs. Analysis of the psychodynamics of situations of this nature.

Proposal: That $1000 be allocated for this purpose, funds to be requested as needed.

10

SUB-PROJECT NO. 3 (See also Nos. 16, 42, 132 and 149)

PRINCIPAL RESEARCHER AND LOCATIONS: New York City and San Francisco

OBJECTIVE AND DETAILS OF WORK: Realistic field testing of R&D items of interest to TSS/CD.

APPROXIMATE TIME SPAN: 1953-1956

SIGNIFICANT ASPECTS: This is the project that started the unwitting testing in New York.

FUNDING: $8,875 approved May 1953. Total: $8,875 in Cashier's Checks.

RESEARCH PARTICIPANT: George White, aka Morgan Hall (alias) "a seaman."

OTHER SPONSORS: None indicated.

NAMES OF CIA MONITORS: Sidney Gottlieb

Robert V. Lashbrook

APPROVERS: [redacted]

Willia A. Gibbons

C.V.S. Roosevelt

SUB-PROJECTS NUMBERS 4, 15, AND 19

PRINCIPAL RESEARCHER AND LOCATION: [redacted]

OBJECTIVE AND DETAILS OF WORK: All three of these projects are to fund the contractor, a magician, to write a manual on the various aspects of the magicians' art which could be useful in covert operations. One aspect of this project was to develop skills which could be used by the working field case officer to surreptitiously place a pill or other item in an item to be consumed by a target personality -- for example, a drinker.

A contractor was employed under Sub-Project No. 34 to prepare a paper on magicians techniques for the covert communication of information.

APPROXIMATE TIME SPAN: 1953-1954

SIGNIFICANT ASPECTS: One of the skills to be developed was the covert administration of drugs.

FUNDING:

COVER MECHANISM: None

APPROXIMATE TOTAL: $5,500, paid by sterile checks

RESEARCH PARTICIPANT: John Mulholland. Nowhere in the file does it specify that he is cleared and witting -- however, the deduction that he was completely witting is inescapable.

OTHER SPONSORS: None indicated

NAMES OF CIA MONITORS: Sidney Gottlieb

Robert V. Lashbrook

SECRET

SUB-PROJECT NO. 5

PRINCIPAL RESEARCHER AND LOCATION: [redacted]
University of Minnesota,
Later the University of Denver

OBJECTIVE AND DETAILS OF WORK: Work apparently began with a demonstration in a [redacted] hotel designed to "demonstrate potentialities of hypnosis as a tool of the clandestine services". Following the successful demonstration this eventually evolved into Sub-Project No. 5. Research in hypnosis was to determine if: hypnosis could be used as a memory enhancer, a learning aid, a polygraph deceiver, etc. Also, research into susceptibility of certain personality types to hypnosis.

APPROXIMATE TIME SPAN: 1953-1956

SIGNIFICANT ASPECTS: None

FUNDING:

COVER MECHANISM: Geschickter Fund

APPROXIMATE TOTAL: $12,000 per year

RESEARCH PARTICIPANT: None

OTHER SPONSORS: None

CL BY [redacted]

SUB-PROJECT NO. 6

PRINCIPAL RESEARCHERS AND LOCATIONS: Eli Lilly Company, Indianapolis, Indiana

OBJECTIVES AND DETAILS OF WORK:

1. To develop reliable source of LSD within the United States.

2. To assist in the search for additional natural hypnotic products.

APPROXIMATE TIME SPAN: 1953-1955

SIGNIFICANT ASPECTS: Probably none. Object was to develop a domestic source for LSD. No testing was done.

FUNDING:

COVER MECHANISM: None

APPROXIMATE TOTAL: $5,000 was approved but not expended as Eli Lilly Company did not charge for this work.

RESEARCH PARTICIPANT: [redacted] (Eli Lilly Company) - witting.

OTHER SPONSOR: None

CL BY [redacted]

SUB-PROJECTS NUMBERS 7, 27 and 40

PRINCIPAL RESEARCHER AND LOCATIONS: Dr. Harold A. Abramson, who sponsored work at two locations: [redacted]

OBJECTIVES AND DETAILS OF WORK: This work started prior to MKULTRA with RD-37 in 1952 and was carried forward with Sub-Projects 7, 1953-1954; 27, 1954-1955, and 40, 1956. These projects seem to be the nucleus of the LSD program and the three were done at both locations. Dr. Abramson, as well as doing work himself, subcontracted research to other specialists. The first years' work seemed aimed at characterizing the various effects of LSD with the aim of ultimately producing a manual for field use. During Sub-Project No. 7, money was provided to sub-contract "work in the fields of brain enzyme and nerve metabolism." As an indication of the scope: "Another psychiatrist will independently analyze the verbatim recordings in over 100 experiments in which LSD-25 has already been given." Sub-Projects No. 27 continued the earlier emphasis to understand the total effects of LSD by studying "tissue metabolism" and LSD influence on embryological development. In addition, work was undertaken to look for LSD antidotes and blocking agents. Sub-Project No. 40 continued the previous work and added aerosol delivery studies. Basic documents on each of the three projects are attached.

20

E2 IMPDET

L BY [redacted]

APPROXIMATE TIME SPAN: 1952-1956

SIGNIFICANT ASPECTS: The work appears to be the necessary basic research on a drug whose impact on society was just beginning. The studies included the use of LSD in therapy. As far as is known, subjects in this experimentation were witting. Funds are included for the payment of subjects. Sub-Project No. 7's proposal contains the following quotation:

> "One of the difficulties of determining explicitly the effect of the drug itself is that the subject and the observer are both conscious of the fact that an experiment is being performed. It is hoped that, in the next year, subjects on the [redacted] who are essentially normal from a psychiatric point of view, will be given unwitting doses of the drug for psychotherapeutic purposes. In this way more valuable experiments will probably be carried out in spite of hospital conditions."

It is not known whether unwitting, in this case, meant fully unwitting or unwitting as to timing. It is also unknown whether unwitting doses were actually given.

Second Proposal

HAROLD A. ABRAMSON, M.D.
[redacted]

(40)

June 12, 1956

[redacted]

Dear [redacted]

May I thank you for the interest shown by your Company in the project at [redacted] I should like to enlist your aid, if I may, for continuation of the project along the following lines.

1. Aerosol Studies. The therapy of individuals by means of aerosols is of great significance in medicine. A hitherto unexplored area of aerosols is the delivery of nebulizers using nonaqueous solvents. It is proposed that studies be made of organic materials in non-aqueous solvents and their mixtures with water to determine nebulizer delivery over prolonged periods of therapy. (60 per cent of budget).

2. As you know, the blocking of LSD reactions has been claimed by many pharmaceutical houses, although none of these claims have really been substantiated. It is proposed that recent investigations by me on tissue extracts be further explored with a view toward discovering what it is in these extracts that blocks the LSD reaction, keeping in mind possible application of these compounds to experimental and clinical psychoses in man. It is understood that this part of the project will be discontinued December 31, 1956. (20 per cent of budget).

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

C-487

23

3. Continuation of studies on non-psychotic humans with a view toward maintaining a test group, as well as to provide experimental work in a frame of reference different from that frame of reference incorporated by items 1. and 2. of the foregoing. However, it shall be the primary purpose of the nonpsychotic test group to test the results obtained by items 1. and 2. (20 per cent of budget).

It is anticipated that the foregoing budget may be amplified by supplementary funds to be received from foundations.

The following is the proposed budget. Owing to the uncertainty of plans for the fiscal year 1956-1957, I should like, if possible, to have the privilege of utilizing the proposed budget to September 30, 1957 rather than to June 30, 1957.

WARNING NOTICE

DRAFT [redacted]
9 June 1953

MEMORANDUM FOR THE RECORD

SUBJECT: Project MKULTRA, Subproject 7

1. The scope of subproject 7 is intended to include the work to be done with LSD and related materials by Dr. Harold A. Abramson at his two facilities for the period ending July 4, 1954. The project will continue to be handled through the Geschickter Foundation for cut-out and cover purposes. The proposal from Dr. Abramson to the Geschickter Foundation is attached to this memorandum.

2. Emphasis will be placed in this coming year on translating the basic data obtained to date into operationally pertinent material along the following lines:

a. Disturbance of Memory
b. Discrediting by Aberrant Behavior
c. Alteration of Sex Patterns
d. Eliciting of Information
e. Suggestibility
f. Creation of Dependence

It is planned to have the second year's work culminate in a compendium of information on this subject that will resemble an operational field manual as much as possible. All other CD/TSS project data that has a bearing on this subject will be used in the preparation of the manual.

3. The sum of money listed under Dr. Abramson's budget includes work in the fields of brain enzyme work and nerve metabolism to be subcontracted to other organizations.

4. The funds include $45,650 for the project at [redacted], $39,500 for Dr. Abramson's own project, and a 2% service charge for the Geschickter Foundation amounting to $1703.00. Therefore, the total cost of this investigation will not exceed $86,853.00 for the period from July 5, 1953 to July 4, 1954.

Charles F. Geschickter, M. D.
Geschickter Fund for Medical Research, Inc.
1834 Connecticut Avenue, N. W.
Washington 9, D. C.

Dear Dr. Geschickter:

May I acknowledge with thanks the support of your Foundation for the previous year's research on LSD25. I should like to take this opportunity to apply for support for the fiscal year July 5, 1953 to July 4, 1954 to continue the research project on the effect of LSD25 on normal adults. The program for the following year is planned as follows:

Content analysis of the present data will be attempted by two psychiatrists. One of these psychiatrists will be the psychiatrist assigned to the project itself. This psychiatrist has observed the phenomana. Another psychiatrist will independently analyze the verbatim recordings in over 100 experiments in which LSD25 has already been given. A comparison of the two surveys will be made to evaluate not only the effects of the drug but the technique of the experimental procedures. The analysis of the data will first concern itself with the raw material and the significance of individual and group responses based on the raw material as presented by

Downgraded to ~~CONFIDENTIAL~~ [redacted]
by authority of [redacted]

~~SECRET~~

[redacted]

28

Downgraded CONFIDENTIAL
by authority [redacted]
date JUN 1977

the verbatim recordings. ~~SECRET~~ SECURITY INFORMATION

Simultaneous with the scrutiny of the raw material, further experiments on individual subjects will be carried out by the ~~psychiatrist~~ psychologist who, using both projective and non-projective media, forces externalization of the attitudes and conflicts of the personality ~~, it is rapidly cutting through the various defenses~~. The quantitative and qualitative analysis of the test data will be correlated with the psychiatrist's study of the raw data to ascertain if the simple interview technique outlined to you in my report ~~of~~ of May 28, 1953 are supplemented or contradicted by our battery of tests:

(1) The Wechsler-Bellevue Intelligence Scale

(2) The Bender-Gestalt

(3) The House-Tree-Person Test

(4) The Rorschach

(5) Word Association Test

(6) Cards 1, 2, 3BF of the Thematic Apperception Test

Integrating the work of the psychiatrist who, as I have mentioned, is concerned with the raw data and the work of the psychologist who is concerned with the projective and non-projective testing will be the coordinating activities of the neurophysiologist. He will be studying the effect of the drug on perception and on motor activities. The steadiness test heretofore described, eye-hand coordination, reaction time to light and sound will be studied together with the variables described on the attached questionnaire as a function of time. Plans are being made to amplify the IBM card

~~SECRET~~ SECURITY INFORMATION

data so that the significance of the attached questionnaire may be more closely delineated. These experiments are very promising and I believe that the utilization of the questionnaire will ~~as~~ much more than a theoretical structure to our program. It has, I believe, provided us with the best type of guide for the study of the effect of the drug as a function of time after ingestion that could have been devised under our experimental conditions.

One of the difficulties of determining explicitly the effect of the drug itself is that the subject and the observer are both conscious of the fact that an experiment is being performed. It is hoped in the next year that subjects on the [redacted] who are essentially normal from a psychiatric point of view will be given unwitting doses of the drug for psychotherapeutic purposes. In this way more valuable experiments will probably be carried out in spite of ~~under~~ hospital conditions.

Attempts are being made at present to set up projects with collaborating organizations on the effect of LSD25 on brain metabolism, on the metabolic activities of nerves and on enzyme reactions.

Following are two budgets both to be administrated by me but under separate accounts for ease of administration. Budgets labelled [redacted] represents the anticipated costs of the project at [redacted] Budget labelled [redacted] is the bedget which will take care of a second coordinating psychiatrist, an enzyme project, and a neurophysiological project directly under the principle investigator and unaffected

SECRET

February 22, 1954

Geschickter Fund for
Medical Research, Inc.
1834 Connecticut Avenue N. W.
Washington, D. C.

Dear Sirs:

May I acknowledge with thanks the support you have given the LSD project at [redacted] for the past two years and take this opportunity to discuss with you the possibility of obtaining a terminal grant for the project at [redacted] from July 4, 1954 to July 3, 1955. The program for 1953 previously submitted is well under way. It has been a pleasure to work directly with your representatives who have aided in implementing the many aspects of the program. Our data, however, have been accumulating very rapidly. So rapid is the accumulation of data that the personnel of the project are confronted with the serious problem of carrying out the program for 1953-1954 and simultaneously writing up the program covering experiments suitable for statistical analysis performed during the first fiscal year of the program.

I should like to propose that the Geschickter Fund make a terminal grant for [redacted] for the following purposes:

1. To complete the papers that were begun during the period 1953-1954.
2. To calculate and to compile the data screened during 1954.
3. To make content analysis of the verbatim recordings not screened during 1953-1954.
4. To be prepared to assay unknown materials.
5. To continue the search for a suitable antidote.
6. To quantitatively determine psychologically and physiologically what happens during rapid desensitization following repeated high doses of LSD25.

The following budget is to be utilized only at [redacted]

MEMORANDUM FOR THE RECORD

SUBJECT: Project MKULTRA, Subproject 27

1. Subproject 27 of Project MKULTRA is being established as a means of providing funds for a terminal grant to Dr. Harold A. Abramson and the [redacted] to complete their program of research on lysergic acid diethylamide. The money is to be used during the period July 4, 1954 to July 4, 1955. The funds will continue to be disbursed by the Geschickter Fund for Medical Research, for cover purposes.

2. A considerable volume of data has accumulated during the past two years from the actual experimental drug administration. During the third year of the project, all of this data will be compiled and analyzed. Also, experimental work will be continued along several lines, including work on potential antidotes, the desensitization reaction to LSD, the testing of materials structurally related to LSD, and several basic investigations on the mode of action of LSD.

3. The budget covers work to be done in two places, [redacted] The attached proposal indicates the cost breakdown of the estimated expenditures.

4. The funds include $42,460.00 for work at [redacted] and $30,200.00 for [redacted] and a 4% service charge for the Geschickter Fund for Medical Research, amounting to $2,506.40. Therefore the total cost of this investigation will not exceed $75,166.40 for the period from July 5, 1954 to July 4, 1955.

SIDNEY GOTTLIEB
Chief
Chemical Division, TSS

PROGRAM APPROVED AND RECOMMENDED:

[redacted]
Exec. Secty., Res. Ed.
Date: 3/3/54

APPROVED FOR OBLIGATION OF FUNDS:

[redacted]
Research Director
Date: Mar. 3-14-54

Attachment: Proposal

Original Only

Declassified to CONFIDENTIAL by authority of: [illegible] Date: June 1977

STATEMENT OF COST (OR EXPENDITURES)

[redacted]

LSD25 PROJECT
JULY 4, 1954 TO JULY 3, 1955

I. Salaries			$32,500
A. Technical		$8,000	
1. Secretarial	$3,500		
2. Secretarial	3,500		
3. Casual Labor	1,500		
B. Professional		22,000	
1. Principle Investigator	8,000		
2. Neurophysiologist	8,000		
3. Psychologist	4,000		
4. Psychologist, one-third time	2,000		
C. Experimental Subjects		2,000	
II. Expendable Supplies			2,600
A. Glassware		250	
B. Chemicals		350	
C. Records and Photography		350	
D. Office Supplies		400	
E. Maintenance		750	
F. Reprints		500	
III. Permanent Equipment			1,500
IV. Travel			2,000
V. Overhead			3,360
			$42,460

May I propose that the work at [redacted] be continued for the following purposes:

1. To continue the work of [redacted] and [redacted] on the metabolism of nerve and brain tissue using conventional methods of studying tissue metabolism in the Warburg apparatus in an effort to isolate enzyme systems responsible for the special effects of LSD25.

2. To investigate the action of LSD25 on the development of the nervous system by studying both the embryological development of the developing embryo as a whole and the effect of LSD25 on the organizer itself. A preliminary survey of the subject indicates that the oligodynamic action of LSD25 may conceivably be involved in the process both of differentiation and development following differentiation.

WARNING NOTICE
SENSITIVE INTELLIGENCE

The following budget is to be utilized only at [redacted]

STATEMENT OF COST (OR EXPENDITURES)

[redacted]

LSD25 PROJECT
JULY 4, 1954 TO JULY 3, 1955

I. Salaries			$21,500
A. Professional		$11,000	
1. Biochemist	$6,000		
2. Biologist	5,000		
B. Technical		10,500	
1. Secretary	3,500		
2. Technical Assistants (two)	5,000		
3. Casual Labor	2,000		
II. Expendable Supplies			3,200
A. Glassware		200	
B. Chemicals		500	
C. Animals		1,000	
D. Records and Photography		500	
E. Office Supplies		500	
F. Maintenance		500	
III. Permanent Equipment			2,000
IV. Travel			1,000
V. Overhead to [redacted]			2,500
			$30,200

The foregoing plans are, of course, subject to modification depending upon a special phase of the work now in progress and the ability to obtain highly qualified personnel needed. I should be indebted to you if you could let me know as soon as possible what part of the foregoing program will meet with your support.

With many thanks, I am,

Yours sincerely,

Harold A. Abramson, M. D.

SUB-PROJECT NO. 8 (Also see Nos. 10, 63 and 66)

PRINCIPAL RESEARCHER AND LOCATION: [redacted]

OBJECTIVE AND DETAILS OF WORK: This was a study of the biochemical, neurophysiological, sociological, and clinical psychiatric aspects of LSD, and also a study of LSD antagonists and drugs related to LSD, such as L.A.E. (Lysergic Acid Ethylamide). Twelve volunteers at the [redacted] were tested to determine the clinical effects of LSD on the adrenal cortex. In another experiment, it was observed that there were autonomic (involuntary nervous system) disturbances following the administration of LSD. Other experiments were conducted to make clinical psychiatric evaluations of the reactions of all subjects who received LSD and of the effect other drugs had when administered in combination with LSD. The psychological experiments administered tests to individuals while under the influence of LSD; the results showed lowered abilities. The files indicate that the testing was done on volunteers.

APPROXIMATE TIME SPAN: 1953-1955

MEMORANDUM FOR THE RECORD

SUBJECT: Project MKULTRA, Subproject 8

1. Subproject 8 is being set up as a means to continue the present work in the general field of L.S.D. at [redacted] until 11 September 1954.

2. This project will include a continuation of a study of the biochemical, neurophysiological, sociological, and clinical psychiatric aspects of L.S.D., and also a study of L.S.D. antagonists and drugs related to L.S.D., such as L.A.E. A detailed proposal is attached. The principle investigators will continue to be [redacted]

3. The estimated budget of the project at [redacted] is $39,500.00. The Geschickter Foundation will serve as a cut-out and cover for this project and will furnish the above funds to the [redacted] as a philanthropic grant for medical research. A service charge of $790.00 (2% of the estimated budget) is to be paid to the Geschickter Foundation for this service.

4. Thus the total charges for this project will not exceed $40,290.00 for a period ending September 11, 1954.

5. [redacted] are cleared through TOP SECRET and are aware of the true purpose of the project.

MEMORANDUM FOR: THE RECORD

SUBJECT : Additional Funds for MKULTRA Subproject 10

1. [redacted], located at the [redacted], was requested by TSS/CD to enlarge the scope of his current research program. This request was made by the Chemical Division to enable [redacted] to pursue areas of research of interest to TSS/CD.

2. The areas of research that [redacted] will investigate will cover the evaluation of certain known techniques for predicting the type and magnitude of the effects of drugs, particularly LSD and alcohol. In addition to the above, there will be an increased effort to exploit certain techniques developed by [redacted] group in the course of their LSD studies for predicting LSD effects, and adapt these techniques to alcohol studies.

3. The cost of this program for a period of one year will be $5,500.00. To this must be added a four percent service charge of $220.00 to the Geschickter Fund for its services. Charges should be made against allotment 6-2502-10-001.

4. The same Memorandum of Agreement applies to this extension as was agreed upon in the original project. However, this additional money will not be accounted for separately, but will be accounted for in the overall project accounting.

5. [redacted] is cleared through TOP SECRET, and is aware of the true nature of the program.

P R O S P E C T U S

In the past three years of research with the drug LSD-25, we have developed reliable methods of analyzing social situations and interactions. Our progress in assessing personality types is useful in diagnosis and prediction. These methods are based on a multi-discipline assessment of personality in dynamic social adjustment under normal circumstances and under stress, i.e., drug effect, irrespective of the attributes of any specific drug.

The briefest phrase to characterize our main area of study is "social personality". A laboratory of experimental social psychiatry has been established in such a way that various types of personality and many situations may be subjected to critical study. For example, its methods can be applied to any specific problem such as the effects of LSD or other drugs like alcohol, on the improvement of interpersonal relations.

There are two important steps to be taken: (1) Completing the work in progress of personality types so we can define more clearly our social personality types and relate them to (a) the more standard, objective tests such as the Wechsler-Bellevue on which [redacted] theory of types is based, and (b) the conventional clinical projective tests such as the Rorschach and Thematic Apperception Tests; (2) Trying out the utility of these tests and special interview and questionnaire methods developed in the course of our studies for predicting specifiable change in social behavior following the ingestion of various drugs, particularly LSD and alcohol.

[redacted]

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

Conclusion of LSD Study:

In the past four years of research with LSD-25 we have developed reliable methods of (a) analyzing social situations and interactions; (b) describing personality in terms of social adjustment, and (c) relating social situations and social personality types to the specific effects of LSD. Through this methodology it has been possible to identify some important determinants of drug effects which have not been previously considered in studies of LSD-25.

While we have made considerable progress in systematically studying these determinants, a certain amount of data analysis still remains to be completed before the determinants of the LSD-25 effect on individual cases can be reliably stated.

Therefore, the primary objective of this final phase of the project is to complete the analysis of data on all our subjects in order to define the extent that differences in certain effects can be accounted for by the above-mentioned determinants.

A second objective is to complete reports on some peripheral studies conducted with Serpisil and certain other psychochemicals.

WARNING NOTICE
SENSITIVE INTELLIGENCE
SOURCES AND METHODS INVOLVED

A third objective is to reduce and summarize the many progress reports submitted during the course of the project into a final report.

E2 [redacted]
DECL BY [redacted]

71 West 12th st., NYC
May 26, 1953

Dear Sidney:

After our telephone conversation this morning I went to the National City Bank of N Y (Wash. Sq. Branch) 72 Fifty sve., and opened an account - - regular checking - - in the amount of $100.00 using the name MORGAN HALL.

It occured to me that for sake of safety - - in case, for example, anything stupid happen to me - - it would simplify matters if I made this a joint account between Hall and [redacted]. Then, in case of my absence, illness or death you could recover the joint funds without any legal difficulties or bother business.

The bank was a little sticky about opening an account in the absence of "references" from another bank, and also found it hard to understand how Mr. Hall got by all these years without a bank account. However, I offered to provide an excellent reference in a government official, a Mr. Geo. White, who is the District Supervisor of the Bureau of Narcotics at Boston, and that seemed to placate the money-lenders. Thereafter, I communicated with White and he immediately wrote a reference for Hall on official stationery. Mr. White also kindly said he was well acquainted with Mr. Gifford and was pleased to offer for him a similar recommendation.

If you think this is a good idea, I suggest you sign the Joint Account Agreement and the three signature cards enclosed and return them to me.

And now that the account is opened I suggest you have funds deposited via Cashier's check - - or any other way that seems easiest - - directly to Mr. Hall's account.

I ordered checks printed with Mr. Hall's name thereon and have also ordered stationery bearing Mr. Hall's name. I considered this might facilitate payment of bills, etc., by mail.

What with suspicious banks, landlords, utility companies., etc., you will understand that creating the Jekyll - Hyde personality in the form of Morgan Hall is taking a little "doing".

See you Monday, the 8th.

Best,

EW

SUB-PROJECT NO. 23 (See also No. 45)

PRINCIPAL RESEARCHER AND LOCATION: Dr. Charles Geschickter

OBJECTIVE AND DETAILS OF WORK: Search for new drugs -- (1) To synthesize new drugs and modify old ones to determine their effectiveness in modifying behavior and the function of the central nervous system. Animal tests were to be done to determine toxicity; (2) To develop new sources of biologically active compounds (derivatives of tryptramine); and (3) Tests were conducted on terminally ill cancer patients.

APPROXIMATE TIME SPAN: 1954

SIGNIFICANT ASPECTS: (2) Memorandum for the Record of 4 February 1955, lists about $440,000 in projects to be administered by Geschickter Foundation in February 1955-February 1956 period; (2) Memorandum for the Record of 29 June 1954 concerns $1,500 payment to Dr. Geschickter for services in 1952-1953, with instructions on how he should list it for income tax purposes while preserving security; (3) Memorandum for the Record of 25 August 1955 states it was necessary to test effects of certain chemical substances on human beings; that certain anticipated effects involved mental functions which precluded the use of mental defectives. The project engineer authorized contractor to pay the hospital expenses (sic) of certain persons suffering from incurable cancer for the privilege of studying the effects of these chemicals

SIGNIFICANT ASPECTS: (Continued)

during the terminal illnesses. Total funds expended in this fashion amounted to $658.05 and full value was received; (4) [redacted] received grants totaling $31,600 as part of Sub-Project No. 23.

MEMORANDUM FOR THE RECORD

SUBJECT : Accountability for Certain Expenditures under Subproject 42 of MKULTRA

1. Subproject 42 was established in part to provide the Agency with a facility for conducting experiments involving the covert administration of physiologically active materials to unwitting subjects.

2. The facility was set up by providing Mr. Morgan Hall with a safehouse in San Francisco and furnishing him with the necessary materials and funds to carry out the approved program. Mr. Hall in turn carried out part of the program with the assistance of certain individuals who covertly administer this material to other people in accordance with his instructions. For their assistance in this program these individuals are paid small sums in cash at irregular intervals.

3. Due to the highly unorthodox nature of these activities and the considerable risk incurred by these individuals, it is impossible to require that they provide a receipt for these payments or that they indicate the precise manner in which the funds were spent.

4. These small expenditures by Mr. Hall will, therefore, appear as cash withdrawals from his account for which no receipt from the ultimate recipient will be required. Each of these operations will be reported upon in detail to the Chief, TSS/Chemical Division and individually will bear his approval when Mr. Hall submits his monthly accounting.

SIDNEY GOTTLIEB
Chief, TSS/CD

APPROVED:

TOP SECRET

DRAFT [redacted]

6 March 1962

MEMORANDUM FOR: THE RECORD

SUBJECT : Project MKULTRA, Subproject 42

1. Subproject 42 is to be continued for the same purposes as when originally established: to support Mr. Morgan Hall's covert and realistic field trials of certain research and development items of interest to TSD, and to maintain the physical facilities required for these trials.

2. In the past year a number of covert and realistic field trials have been successfully carried out. The results of these experiments have provided factual data essential to establishing protocols for a number of contemplated operations. A continuation of covert and realistic field trials are necessitated by the production of new materials in TSD programs, particularly in areas requiring detailed knowledge of the effectiveness and efficiency of delivery systems. Additional trials are also necessitated by the need for better controlled "field-type" experiments.

3. The estimated cost of the project is $10,000 for a period of one year. Charges should be made against Allotment 2125-1390-3902.

4. Accounting for funds and equipment under this subproject has been established on a detailed basis with the auditor and will continue as in the past.

TOP SECRET

~~SECRET~~

1 August 1955

MEMORANDUM FOR: THE RECORD

SUBJECT : Discussion with Morgan Hall Concerning Past and Future Accounting for Funds.

1. The points raised in the recent audit of the Morgan Hall accounts (MKULTRA, Subprojects 13, 16 and 42) were discussed with Mr. Hall in order to obtain more complete accountings where possible and to give instructions for future accountings.

2. The following points mentioned in the auditor's report are discussed in the order they are in that report, starting with paragraph 30.

3. All available receipts are now on hand in TSS/CD.

4. Bank statements and checks for the bank in New York are missing for the months of October and December 1954, January and March 1955, and for the San Francisco bank they are missing for the month 24 February to 24 March 1955. Mr. Hall states these are not in his files and he is certain they were forwarded to TSS/CD. It is not known where these records were lost. Mr. Hall will request duplicate statements from the banks. If feasible, photostats of the checks indicated in the statements will be obtained from the bank. However, Mr. Hall pointed out it is generally a major task to obtain photostats of checks from a bank.

5. A declaration of trust for the bank account in San Francisco has been signed by Mr. Hall and is on file in TSS/CD.

6. The attached written instructions were given to Mr. Hall on the submission of future accountings. He was given a number of small account books and instructed to send in one each month, together with all receipts, etc.

7. Check #053, cashed 15 April 1954, which bears the notation "Atlantic City trip", was questioned by the auditor. An approximate breakdown of the funds involved has been signed by Mr. Hall. This is the best that can be reconstructed at this date. Current instructions call for more detailed accounting for future trips.

~~SECRET~~

130

8. Check No. 081, cashed 6 July 1954, for cab fares, household supplies, maid service, air conditioner repairs, food, liquor, was questioned by the auditor. This check was cashed to obtain cash funds for the routine maintenance of the apartment. The air conditioner repairs were made by a local repairman who was paid in cash and gave no receipt. The other miscellaneous expenses were for small amounts for which receipts were not customary or not obtained. The purposes and amount appears reasonable; however, Mr. Hall has been instructed to provide itemized breakdowns of miscellaneous expenses in the future.

9. Check 095, cashed 31 January 1955, and check 100, cashed 18 February 1955, were both questioned by the Auditor. The Auditor's report says check 095 states "cleaning (not readable); landlord; household supplies", and that check 100 states "cleaning (not readable); landlord; household supplies; cab fares". The "not readable" portion of each check was identified by Mr. Hall as "tips to" (making the complete phrase, "tips to landlord"). Both of these checks were cashed at the time the apartment in New York was being closed. In setting up the apartment in New York, the installation of special equipment involved extensive removal and replacement of woodwork and wall plaster. A "doorway" was constructed in the wall between the operational and monitoring apartments to allow visual surveillance and the testing of experimental photographic surveillance equipment, and a "window" was constructed in a bedroom wall to permit visual surveillance techniques. In addition, other "furnishings" and "decorations" further altered the apartment. When the apartment was given up, the equipment was removed by TSS/CD and TSS/AFD personnel and the damage was repaired to the extent necessary to hide the nature of the operations. It was felt the remaining alterations, etc., such as the opening between the two apartments, could be explained by Mr. Hall's original cover story to the landlord. However, it was obvious that more than reasonable reconditioning would be needed by the landlord to prepare the apartment for a new tenant and that it would be best that the landlord accept some changes as permanent. Negotiations between the landlord and Mr. Hall were conducted on an informal basis, and the "tips to landlord" were to clear up any difficulties about the alterations and damages, to facilitate release from the lease, and for extra efforts on the part of the landlord to obtain a new tenant to take over the unexpired lease. No receipts were involved. The "cleaning" portion was related to preparing the apartment for transfer back to the landlord. Mr. Hall has been instructed that expenses are to be itemized in the future, rather than grouped together.

b. Check #081 for $100 states "Cab fares, household supplies, maid services, air cond. repairs." Memo dated 15 Dec 54 states that checks also included food and liquor.

c. Check #095 for $100 states "cleaning - (not readable) - landlord - household supplies."

d. Check #100 for $150 states "cleaning - (not readable) - landlord - household supplies - cab fares."

Rent

34. Lease for the East Coast apartment was effective 1 Jun 53 at a rental of $235 per month for a period of 28 months ending 30 Sep 55. The status of the lease, the amount paid, and the amount still due, if any, could not be verified because of missing paid checks, lack of receipts and lack of knowledge when the apartment was vacated. It is understood that the lease was cancelled with the loss of only one month's rent represented by an advance deposit made at the time of executing the lease. The records show 18 additional payments have been made of $235 each. Three other checks may have been issued for Oct and Dec 54 and Jan 55, if so, this would indicate the apt was vacated as of 31 Jan 55. Facts regarding the financial status of the lease should be ascertained.

35. Check issued to [redacted] for $20.58 is not explained or otherwise supported.

36. Three adding machine tapes totalling $62.80 were submitted, presumably for expenditures, but there is no explanation or identification as to date or purpose.

37. An insurance certificate showing $25 premium on shipment of household effects was submitted but no evidence is available that it has been paid.

38. Recommendation - In addition to explaining and rectifying the above deficiencies, it is recommended that quarterly accountings be obtained; the starting balance should be $2,901.62, all cash received and paid out, and the balance on hand should be shown; each check issued or cash paid out should be dated, itemized and supported by a receipt or sales invoice or explanation of why such support cannot be submitted; bank statements and paid checks should be submitted quarterly and a periodic report should be rendered on the use of liquor, i.e., whether given away or consumed. More than a thousand dollars has been spent to date on liquor with no record as to its necessity or use. The accountings and reports should be signed by the chief of the division indicating his approval of all appropriate expenditures.

SUB-PROJECT NO. 43

PRINCIPAL RESEARCHER AND LOCATION: [redacted]
University of Oklahoma

OBJECTIVE AND DETAILS OF WORK: This study was to perform research in the field of psychology of the dissociated** states and of hypnosis. Research yielded promising leads in terms of knowledge of how hypnotizability can be influenced by pharmacological means. Several drugs (unspecified) were identified that were apparently effective in speeding the induction of hypnotic states and in deepening the trance that is produced in given subjects. Observations were also made of drugs (unspecified) that provide some degree of immunity to hypnotic influence.

APPROXIMATE TIME SPAN: 1955 - 1956

SIGNIFICANT ASPECTS: Testing on human subjects. It is not stated in the file whether the subjects were volunteers or non-volunteers.

APPROVERS: Willis A. Gibbons

Proj. 44

137

SUB-PROJECT NO. 44

PRINCIPAL RESEARCHER AND LOCATION: [redacted]
University of Illinois
College of Medicine, Chicago

OBJECTIVE AND DETAILS OF WORK: The objective of this research was to develop screening and bio-assay techniques for psychomimetic (capable of proudcing a psychotic-like state) agents which do not involve human testing. The work was not classified.

APPROXIMATE TIME SPAN: 1956 - 1958

SIGNIFICANT ASPECTS: Although this research was confined to the use of small animals, the last paragraph of the proposal states: "In the course of the work this year we have tested a number of compounds of a completely different chemical nature from the known psychomimetic agents. The animal tests indicate that these compounds may be psychomimetic in man. During the coming year we propose to complete the work on the screening techniques so far developed and put them on a basis that will make them useful as routine laboratory test procedures. Also, we shall continue work with the new agents, carrying them to human test to verify their psychomimetic activity." There is no indication that testing on human beings occurred.

FUNDING:

COVER MECHANISM: Geschickter Foundation for Medical Research

APPROXIMATE TOTAL: $48,000 - Sterile checks made to the University

RESEARCH PARTICIPANTS: The principal investigator, [redacted], were both cleared and witting. [redacted], unknown if witting.

The contract with the University has a paragraph reading: "(2) The conduct of the investigation will be under the full control of the University which will supervise and direct all experimental work".

OTHER SPONSORS: None indicated

NAME OF CIA MONITOR: [redacted]

APPROVERS: Robert V. Lashbrook

Col. James Drum

Willis A. Gibbons

Proj. 45

SUB-PROJECT NO. 45

PRINCIPAL RESEARCHER AND LOCATION: Dr. Charles Geschickter [redacted]

OBJECTIVE AND DETAILS OF WORK: This project involved the search for, and preliminary testing of, materials (not mentioned) which might alter consciousness and have other physiologic effects (alteration of blood pressure, cardiovascular responses, body temperature or anti-cancer properties). The purpose was to identify and evaluate substances which might have application in the psychochemical and "K" (knockout drops) fields. No comments indicating the results of the project were found.

APPROXIMATE TIME SPAN: 1955 - 1963

SIGNIFICANT ASPECTS: Body fluid of seriously ill medical patients were screened for toxic substances and animal experiments on the effect of these toxic substances were conducted. After pharmacological and toxicity studies in animals, those active substances which were determined to be within a suitable toxicity range were to have been tested on appropriate patients after initial testing had been done on advance cancer patients. No further information regarding this suggested human experimentation was found.

As this project progressed, it evolved into a study of stress which may have had medical benefits for patients.

OBJECTIVE AND DETAILS OF WORK: To study drugs affecting the central nervous system, looking towards an anti-interrogation drug. Also, to screen and evaluate hallucinogenic materials of interest to Technical Services Division.

APPROXIMATE TIME SPAN: 1955-1962

SIGNIFICANT ASPECTS: Testing on human volunteers at Atlanta Federal Penitentiary and [redacted]. (Volunteers at Atlanta Federal Penitentiary received $2900 during 1 June 1957 - 31 May 1958 period.)

In 1960 100 inmate/volunteers, aged 21-28, from the New Jersey State Prison at Trenton were used.

In 1962 the Bordentown (N.J.) Reformatory averaged 10 volunteers a week for tests of drugs which alter human behavior.

In 1962 work was initiated to evaluate a compound producing temporary amnesia and an alcohol-like effect on behavior.

SUB-PROJECT NO. 60

PRINCIPAL RESEARCHER AND LOCATION: Society for the Investigation of Human Ecology, Inc., New York City.

OBJECTIVE AND DETAILS OF WORK: This project established a covert funding mechanism, the Society for the Investigation of Human Ecology, Inc., (SIHE), for the support of sociological and psychological studies. Prior to SIHE, this activity was part of the Human Ecology Study Program of Cornell University, which sponsored, with Agency financial assistance, studies primarily at Cornell.

APPROXIMATE TIME SPAN: 1956-1962

SIGNIFICANT ASPECTS: Many projects of little or no direct value to CIA were funded, primarily to develop the cover of SIHE as a legitimate Foundation. These "throw away" projects were carefully screened prior to funding by a review panel which included persons who originally controlled the Cornell Program. Thus, even though projects of little value to the Agency were funded, a panel had reviewed the cover projects for their possible contribution to society.

FUNDING:

COVER MECHANISM: Society for the Investigation of Human Ecology, Inc.

MEMORANDUM FOR: THE RECORD

SUBJECT: MKULTRA, Subproject 63 (Continuation)

1. The purpose of this subproject is to maintain the professional services of [redacted] to TSD/RB. These services include special consultations in [redacted], special projects which have required his travel [redacted] briefings, participation in planning sessions, and ongoing observation and research.

2. [redacted] has developed since 1954 under Agency sponsorship considerable experience with psychopharmacological materials of immediate relevance to the Agency operational capability in this field. In addition to some of the more esoteric hallucinogenic drugs, [redacted] has done a number of studies involving the use of alcohol. He has recognized that the variations in behavior demonstrated by non-alcoholic individuals in a natural setting suggest that studies of alcohol as a drug have been too superficial. It is planned to have [redacted] continue to explore the use of alcohol as a social phenomenon with particular emphasis upon those variables that would prove predictive in the assessment and possible manipulation of human behavior. In addition, [redacted] would be expected to consult on any additional work that may be done with hallucinogenic drugs of immediate operational interest.

3. The cost of the program for one year is estimated to be $5500. Charges should be made against Allotment 1125-1390-3902.

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 63 (Continuation)

1. The purpose of this subproject is to continue the mechanism for reimbursing [redacted] for personal services rendered TSD/CB. These services include special consultations in [redacted] lectures, briefings, participation in planning sessions, and participation in and reporting of certain professional meetings and conferences. The specific areas of study which [redacted] will give special attention are the following:

(a) Developing a classification of natural drinking situations (bars and cafes) in [redacted] and vicinity which has wide applicability.

(This is a development from pilot studies started in 1956 with more organized studies in 1958 and 1959.)

(b) Continuation of bartender interviews previously reported, with the goal of obtaining a more representative sample and obtaining the additional information available from interviewing techniques that have improved with experience.

(c) Developing methods for study of bar and tavern clients with the aim of using this field station as a natural focus for personality and situational appraisal and prediction. This work has been in progress since 1956 but has those manifold difficulties of a relatively unstructured, uncontrolled situation.

(d) Reviewing the pilot studies of 1956 which led to the structured studies of 1957, 1958 and 1959. The original pilot studies were used to develop the subsequent structured experiments but the data was never organized. Now after progressing through three years of structured experiments to field experiments, it may prove valuable to return to the original data and give it sufficient attention to see what it can contribute.

MEMORANDUM FOR: THE RECORD

SUBJECT : Continuation of MKULTRA, Subproject No. 66

1. It is requested that MKULTRA Subproject No. 66 be continued to support the research program on the determinants of alcohol intoxication undertaken at [redacted] by [redacted] and associates. The program will be continued for one year starting 16 September 1957 through 16 September 1958.

2. The scope of the project will include (a) continuation of blind experimental studies of drug effects, employing various "alcohol placebos" and chemical extenders developed by TSS/CD; (b) continuation of studies or predictors of intoxication; (c) exploration of the feasibility of obtaining significant observations in natural social-drinking situations as a basis for assessing "normal" personality; (d) development of checklists and other types of formal prediction scales. A detailed proposal is attached.

3 The project will continue to be financed through the Society for the Investigation of Human Ecology, Inc. The Society acts in the capacity of a cover organization The cost of the program for this year will be $29,052.88. Charges should be made against allotment 8-2502-10-001.

4. The Society for the Investigation of Human Ecology, Inc. will request [redacted] to submit to them a summary accounting of monies received from the Society. They will request return of any unexpended funds received under the grant from the Society.

5. Requirement for a six month informal accounting on the part of the principal investigator is waived.

6. Title to any permanent equipment purchased by funds granted the [redacted] will be retained by the [redacted] in lieu of higher overhead rates.

7. It was agreed that technical reports reflecting the progress of the research program will be submitted at mutually acceptable intervals.

DRAFT/[redacted]
29 August 1956

MEMORANDUM FOR THE RECORD

SUBJECT: MKULTRA Subproject 66

1. Subproject 66 is being initiated as a means to support a research program in the general field of predicting drug efforts to be undertaken at the [redacted] under the direction of [redacted] Program will be for a period of one year starting 15 September 1956 through 16 September 1957.

2. The scope of the project will be (a) to systematically test a number of techniques for predicting a given individual's reaction to LSD 25, other psychochemicals and alcohol, (b) to determine the extent that these techniques can be employed to predict reactions to stress situations other than those produced by psychochemicals, (c) to test out the feasibility of training non-professional observers in the use of these evaluation and prediction techniques and (d) to study the intoxication produced by alcohol consumption in a "social drinking situation" and relating this to LSD intoxication. A detailed proposal is attached.

3. This project will be financed through the Society for the Investigation of Human Ecology, Incorporated. The Society will act in the capacity of a cover organization. The cost of the program for a period of one year will be $24,500.00. Charges should be made against Allotment 7-2502-10-001.

4. The Society for the Investigation of Human Ecology, Incorporated will request [redacted] to submit to them a summary of accounting of monies received from the Society. They will request the return of any unexpended funds received under the grant from the Society.

5. Requirement for a six month informal accounting on the part of the principle investigator is waived.

6. Title to any permanent equipment purchased by funds granted the [redacted] will be retained by the [redacted] in lieu of higher overhead rates.

7. It was mutually agreed that documentation and accounting for travel expenses which are reimbursable by the [redacted] will conform with the accepted practices of that institution.

CL BY [redacted]

Proj. 68

SUB-PROJECT NO. 68

PRINCIPAL RESEARCHER AND LOCATION: Dr. D. Ewen Cameron
Allan Memorial Institute of
Psychiatry at McGill University
Montreal, Quebec

OBJECTIVE AND DETAILS OF WORK: To study the effect upon human behavior of the repetition of verbal signals. This work resulted from a request to the Society for the Investigation of Human Ecology from the Allan Memorial Institute of Psychiatry for a grant: "to study the effects upon human behavior of the repetition of verbal signals". There is no evidence that the Agency influenced the nature of this research. Patients selected were those suffering from extremely long-term and intractable psychoneurotic conditions. They were treated with LSD-25 and other similar agents to break down on-going patterns of behavior. The plan included intensive repetition (16 hours a day for six or seven days) of prearranged verbal signals -- patient is kept in partial sensory isolation -- then continuous sleep for seven to ten days. Lasting behavioral changes of two months duration were achieved in one case.

23 April 1959 Memorandum for the Record states that Dr. Cameron completed over 100 cases, "with some rather dramatic results, particularly with neurotics".

There is no indication in the file as to whether the patients were witting.

SIGNIFICANT ASPECTS: Testing of LSD on human beings, and covertly funding research in a Canadian University.

FUNDING:

COVER MECHANISM: Society for the Investigation of Human Ecology

APPROXIMATE TOTAL: $60,000 in Cashier's Checks

RESEARCH PARTICIPANT: Dr. D. Ewen Cameron, unwitting

OTHER SPONSORS: Allan Memorial Institute of Psychiatry (McGill University).

17 August 1960 Memorandum for the Record indicates the U.S. Air Force was considering co-sponsorship of effort.

Proj. 14

SUB-PROJECT NO. 74

PRINCIPAL RESEARCHER AND LOCATION: Consisted of many (in excess of 25) grantees, both individuals and institutions, in various parts of the United States and the world.

OBJECTIVE AND DETAILS OF WORK: As the Society for the Investigation of Human Ecology (SIHE) became better known in the scientific community and its reputation grew, it became the recipient of many unsolicited proposals from researchers around the world. Since some of these proposals were of interest to the Agency, it was the policy of the Society to encourage research proposals. It was, therefore, decided that in order to maintain its bona fides with the scientific community, the Society should fund selected smaller research proposals as a "cover", even though there was little, if any, interest in or prospects for a product of value to CIA from these proposals.

APPROXIMATE TIME SPAN: 1958 - 1962

SIGNIFICANT ASPECTS: None, although on reading the file without prior knowledge of the purpose of these "cover" grants, they could be misinterpreted as to the extent of CIA interest. A sample of project titles: "An Exploratory Study on the Effects of Circumcision"; "A Study of Cross-Pressures on the District Officer in Burma"; "Research Program on Intergroup Attitudes"; and on.

FUNDING:

COVER MECHANISM: Society for Investigation of Human Ecology

APPROXIMATE TOTAL: $100,000

RESEARCH PARTICIPANTS: None

OTHER SPONSORS: Many of these sub-sub-projects had supplemental sponsors in addition to SIHE sponsorship.

SUB-PROJECT NO. 124 (See also Nos. 2 and 140)

PRINCIPAL RESEARCHER AND LOCATION: [redacted]

OBJECTIVE AND DETAILS OF WORK: The objective was to develop a more sophisticated methodology for measuring carbon dioxide tension, the pH of body fluids, and to study relationships between blood pH and psychophysiological variables. The acid-base equilibrium of psychiatric patients was to be surveyed. Then, the feasibility of altering the acid-base equilibrium, and thereby their mental condition, by carbon dioxide inhalation was to be investigated. The duration of psychophysiologic alteration after such inhalation was also to be studied on normal volunteer patients. The apparent CIA interest was to investigate the possibility of inducing a drug-like state through the simple expedient of carbon dioxide inhalation.

APPROXIMATE TIME SPAN: 1960 - 1965

SIGNIFICANT ASPECTS: Testing on human volunteers.

DRAFT/[redacted]
15 September 1960

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 124

1. It is requested that Subproject 124 be approved to support the research program of [redacted] in "The Psychophysiological Correlates of Carbon Dioxide Environment" in accordance with the attached proposal.

2. This study will add to our methodological sophistication for measuring carbon dioxide tension and pH of body fluids as well as our knowledge of some of the relationships between blood pH and certain psychophysiological variables mentioned in the attached proposal.

3. This project will be funded through the Society for the Investigation of Human Ecology, Inc. for cover purposes. The accounting for funds expended shall conform to the established procedures of that organization. Title to any permanent equipment shall remain with [redacted] in lieu of overhead charges.

4. The total cost of this project for six months is estimated to be $6,500 as indicated in the attached budget. Charges should be made against Allotment 1525-1009-1902. Any unused funds will be returned to the Society at the completion of the project.

EXEMPT; CL BY [redacted]

Proj. 125

SUB-PROJECT NO. 125

PRINCIPAL RESEARCHER AND LOCATION: [redacted]
Veterans Administration Center
Martinsburg, West Virginia

OBJECTIVE AND DETAILS OF WORK: This project partially supported an on-going study at the Veterans Administration Center in Martinsburg, West Virginia, studying differential effects of drugs on behavior. The emphasis was on the placebo effect and the interaction between placebo and drugs. The drug was d-amphetamine and the dose level was 10 mg. The study attempted to isolate subtle effects which, at that time, were highly pertinent to evaluating results from the Agency's more general work with psychopharmacological agents.

APPROXIMATE TIME SPAN: 1960-1963

SIGNIFICANT ASPECTS: Four group members of the Domiciliary at the Veterans Administration Center, Martinsburg, West Virginia were involved in the tests: those receiving drugs, those receiving placebos, those who were not aware they were receiving drugs, and those receiving nothing. Two published articles resulted from these studies.

SUB-PROJECT NO. 142

PRINCIPAL RESEARCHER AND LOCATION: [redacted] (Independent Contractor in [redacted]

OBJECTIVE AND DETAILS OF WORK: A quote from the original proposal: "It is proposed to carry out certain biological studies involving electrical brain stimulation of cold-blooded animals. In addition to the various theoretical reasons for such studies, it appears that certain practical guidance systems involving more detailed behavioral control of both positive and negative sorts may be possible than are presently attainable in warm-blooded animals being investigated." The final report was entitled: "A Study of Comparative Anatomy".

APPROXIMATE TIME SPAN: 1963-1965

SIGNIFICANT ASPECTS: A Memorandum for the Record to justify the funding of this rather basic research states: "Some of the uses proposed for these particular animals would involve possible delivery systems for BW/CW agents or for direct executive action-type operations as distinguished from the eavesdropping application . . .".

Contents of Newly-Discovered* MKULTRA Material

The attached listing was recovered with the material contained in the seven boxes of MKULTRA documents recently located in the Retired Records Center. It is useful in that it identifies participating researchers, the institutions in which they worked, and the CIA officials who monitored their work. However, it should not be considered a total list of the names and locations found in the recovered files.
