A/B, 3, 2/73

19 November 1952 (Wednesday)

On 19 November 1952, SI and H experimentation was carried on in Building 13, Room 20, with [redacted] and [redacted] and [redacted] by Messrs. [redacted] and [redacted]. Also present was [redacted] who had joined this group for the first time. In view of the fact that [redacted] was new, the writer again went into some detail on the Artichoke work and tested [redacted] on the falling back technique and hand rising technique.

In both instances, [redacted] responded very well. Immediately thereafter, [redacted] using the eye fixtation technique, succeeded in obtaining a good hypnotic situation in regard t[redacted].

The rest of the session was spent in a general discussion of the hypnotic technique and routine tests for depth and induction. In this connection, it should be noted that [redacted] proved to be an excellent subject and with [redacted] was able to accomplish several fairly advanced tests.

As noted previously, neither [redacted] nor [redacted] advanced over their previous induction points and very clearly demonstrated again that they were not good subjects.
