28 October 1952 (Tuesday)

On Tuesday, 28 October 1952, SI and H experimentation was carried on in Building 13, Room 20, with Misses [redacted], and [redacted] by Messrs. [redacted].

Since all of the above subjects were experienced and Misses [redacted] and [redacted] long regarded as excellent subjects, advanced experimentation was begun at once. This took the form of producing quickly a deep hypnosis in all subjects and holding the control for a previously determined length of time. In each case, all subjects were kept under control for 45 minutes and were moved about Building 13 in a natural manner, placed in various rooms, and tested by experimentation for depth of hypnosis. In addition, both Messrs [redacted] and [redacted] attempted to drive home to the greatest possible extent, total amnesia in the subjects for their activities for the preceding 45 minutes.

A

All subjects, as mentioned above, held a deep hypnotic condition for 45 minutes and after awakening, all subjects had an almost perfect amnesia for their activities during the period of hypnosis. This is particularly true of Misses [redacted] and [redacted] who are capable of musch deeper hypnosis than [redacted]. For matter of record, however, it should be noted that [redacted] and [redacted] agree that this was the deepest that [redacted] had obtained in her work to date. These experiments were regarded as successful and pointed the way to future experimentation involving long-range activity of this type.

After a brief discussion, the session was concluded at approximately 9:00 PM.
