SUBJ: SI and H Experimentation, 27 January 1953

On 27 January 1953, [redacted] and the writer had planned to conduct H experimentation with [redacted] and [redacted]. Unfortunately, through a series of circumstances, [redacted] and [redacted] were unable to attend.

For matter of record, it should be noted that [redacted] is leaving the Agency apparently as of February 1st by transfer to the [redacted]. Her work has been absolutely outstanding and her leaving is regarded as extremely unfortunate from the point of view of this experimentation.

Since [redacted] had never previously attended one of these experimental sessions, it was decided between [redacted] and the writer that we would discuss the experimentation with [redacted] and try a few simple tests with her and try and determine if she would be a good future subject. Accordingly, the writer briefed [redacted] in the manner that all previous volunteers have been briefed and thereafter she was given several standard tests for suggestibility. In these tests, [redacted] indicated by strong reactions that she was a good subject; hence, direct H was tried and it was found on three attempts that [redacted] responded very well. On the basis of this work, it is felt that [redacted] may be a very good subject with proper development.
