Subject: SI and H Experimentation and Research, 16 December 1953.

On Wednesday, 16 December 1953, Si and H experimentation and research was carried out in Room 20, Building 13 by Mr. [redacted] and using the following as subjects: Misses [redacted] and [redacted].

After a brief discussion, the writer ran all hands on a slow induction with apparently complete success. At the conclusion of the induction process and before awakening all hands, the writer gave a simple PH that each individual at whom the writer pointed his right hand would pass without further instruction into a deep H sleep. Thereafter, the writer using the above PH ~~passed~~ pointed at each subject in turn and they passed into a deep H trance state. During each subject's test, a simple PH or creation of hallucination or catalepsy was tried with mixed success. Some subjects responded, other did not respond to the direct suggest but responded to other suggestions.

Since the writer was the only person present at this session, work was concluded at about 8:30 to enable the writer to take all present home.
